REQUEST FOR INFORMATION

The United States Agency for International Development's Mission to Bangladesh (USAID/Bangladesh) is contemplating a project to be implemented by a Bangladeshi institution that will work in the areas of public policy analysis, monitoring and evaluation and economic development research. To that end, USAID/Bangladesh is conducting a market survey to determine interest, technical and managerial capability of non-governmental, for-profit and non-profit Bangladeshi economic and/or social research organizations, including Universities to implement the project. The responses received as a result of this Request for Information (RFI) will form the basis for USAID's market survey.

All interested institutions should visit the USAID Bangladesh website (www.usaid.gov/bd/proposals.html) to view the detailed RFI. Qualified institutions are requested to fill out the requested information using format as described in the Section # 6 of this RFI. Response for the information requested must be in English and once completed must be sent to the following e-mail address: EGFERfidhaka@usaid.gov

Closing date to submit response is March 26, 2006

Career calling in telecommunications company

A leading telecommunications company is looking for highly capable talent to join the team for exciting challenges and a fast-track career opportunity in the following positions:

GSM Field Implementation Manager
Manages teams in the field and is responsible for reporting on schedule impacts, resource and equipment needs. Coordinates with Engineering to ensure that field activities are aligned with engineering objectives such as site acquisition, construction, BSS installation, RF interference issues and transmission issues. Manages all site documentation for customer handover. Interfaces with the Customer and Engineering teams within the project.

Senior Transmission Planning Engineer
Must be able to carry out access and backbone network design for GSM cellular systems. Should have in-depth understanding of PDH and SDH technology (MW) and is able to dimension and generate technical proposals. Must have knowledge in microwave link engineering using microwave engineering software tools and frequency planning. Must have working knowledge on MapInfo, MS Visio and PC software tools. Must have working knowledge of GSM networks.

RF/Senior RF Optimisation Engineer
Has in-depth knowledge in all areas of optimizing a RF network. Able to plan and optimise the network, collect and analyze drive test logs and produce statistics. Has a thorough understanding of call processing and knows how to carry out system analysis of call processing. Understands problems that result in poor RF coverage. Can identify and resolve sources or interference and poor performance. Experience using advanced data modeling and simulator tools and can do in-depth RF analysis and make recommendations for improvements. Experience of using of TEMS.

Site Acquisition Coordinator
Project and contract management of turnkey vendors, ensuring that the site acquisition phase of the project is in line with the overall schedule. Appropriate prioritisation of strategically important sites. Escalation of non standard rentals and terms and conditions for early resolution of issues. Close liaison with regional functional managers. Reporting of progress, identification and escalation of issues and delays in the schedule. Telecommunications base station site acquisition experience is essential. Property management, lease negotiations, rent reviews, portfolio management etc. Good interpersonal skills, organisational skills and ability to work in a team.

Database Systems Engineer
Has an in-depth knowledge of BSS database commands and GSM parameters. Has understanding of how to configure a network database including parameter settings and implementation of new features. Capable of retrieving raw statistics and analyzing them when needed. Can carry out database upgrades. Able to evaluate impact of changes using OMC call statistics.

Construction Supervisor
Responsible for managing third-party vendors, construction of sites to meet regional schedules in line with national construction and guidelines including; planning and scheduling, allocation of work, auditing the vendors regional site construction management (quality, timescales). Planning and coordinating acceptance activities with the Regional Manager and Implementation Manager. Co-ordination of ordering of power supplies to meet construction deadlines. Auditing site designs to ensure most cost effective solutions are used. Escalation of issues for early resolution. Co-ordination of documentation (safety, electrical compliance, etc.). Reporting of progress. Telecommunications base station site construction experience or in general construction or an electrical industry is a minimum requirement.

BSS Field Engineers
A BSS Field Engineer has an overall understanding of the entire BSS system. Able to read and interpret site layout and configuration diagrams and is familiar with installation procedures for a BSS including: Equipment layout, power requirements, wiring, and RF cabling and grounding guidelines. Capable of performing commissioning tests, functional testing, fault finding and BSS integration. Knowledge of commissioning procedures. Is able to troubleshoot a complex site and can deal with basic emergency situations. Able to do preliminary analysis of drive tests results and call logging software files to identify coverage problems. The engineer can interpret the databases to recognize system parameter problems, is able to make recommendations to the project team. Can climb towers when needed.

Project Administrative Assistant
A number of positions are available in Dhaka, Chittagong and Sylhet to support the Project Director/Regional Project Manager. Responsibilities cover document management, asset tracking database management and entry, general office support for a project team of 20 - 30 staff. Duties will include travel booking, document and letter writing, report and presentation preparation. Database entry into asset management system, records management and other office duties.

OMC/Senior OMC Administrator
Has an overall understanding of the entire GSM OMC system and how it is connected to the network. Can perform routine system administration tasks, understands the basic operating system(s) and can do basic OMC troubleshooting. Able to perform point release software upgrades. The engineer is very familiar with all related OMC documentation and understands and utilises the proper procedures for handling and escalating problems and issuing trouble tickets. UNIX System Administration experience essential.

Transmission Field Engineers
Must have good understanding of PDH and SDH microwave equipment and associated test equipment. Must have working knowledge of microwave network design. Expertise on MapInfo, MS Visio and PC software tools. Expertise on installation of microwave equipment and integration to BSS and has working knowledge of GSM networks and products. Previous technical knowledge of other OEM microwave equipment is required. Extensive field installation and climbing experience required.

Date - Wednesday, March 15, 2006
Time - 8:00 am - 5:00 pm, (Break 1:00 pm - 1:30 pm)
Venue - Radisson Water Garden Hotel, Dhaka

Instructions:
