Books

Shadows of the Mind A Search for the Missing Science of Consciousness Roger Penrose Price: Tk 1455.00 Shadows of the Mind is a profound exploration of what modern physics has to tell us about the mind, and a visionary description of what a new physics—one that is adequate to account for our extraordinary brain—might look like. It is also a bold speculation on the biological process that makes consciousness what it is. In this illuminating book Penrose provides powerful arguments to support his conclusion that there is something in the conscious activity of the brain that transcends computation—and will find no explanation in terms of present-day science.

God's Equation Einstein, Relativity, and the Expanding Universe Amir D Aczel, Price: Tk 1075.00 In a work that is at once lucid, exhilarating, and profound, renowned mathematician Dr Amir Aczel, critically acclaimed author of Fermat's Last Theorem, takes us into the heart of science's greatest mystery. In January 1998, astronomers found evidence that the cosmos is expanding at an ever-increasing rate. The most compelling theory cosmologists could find to explain this phenomenon was Einstein's cosmological constant, a theory he conceived—and rejected—over 80 years ago. Drawing on newly discovered letters of Einstein, years of research, and interviews with prominent mathematicians, cosmologists, physicists, and astronomers, Aczel takes us on a fascinating journey into "the strange geometry of space-time," and into the mind of a genius.
