in the health sector, he

HE 'problematic' school system needs to be dramatically improved to bring about success for the government's compulsory primary education programme, so says Cole P Dodge, the outgoing UNICEF representative

in Bangladesh. "The government has an excellent policy on compulsory primary education but the delivery of services has been much more problematic," he

adds. In an interview with The Daily Star, Dodge also dwells on his experiences of over three years here, on the progress of various UNICEF programmes, the role of nongovernment organisations (NGOs) in the developmental process, possible fields of regional cooperation to improve the condition of children, the role of the media and on his personal and family life.

"What I will remember most about Bangladesh is the very good work experience which I have had here," he says "there have been more successes for children in Bangladesh than any other country that worked in."

Cole P Dodge served as the UNICEF representative in Uganda and Sudan before being posted in Bangladesh in 1989. He now joins as the UNICEF Regional Director for east and southern Africa based in Nairobi, Kenya.

Noting that the compulsory primary education programme is a commitment of this government, Dodge points out that its implementation is going to require for the government to actively pursuing, requesting and encouraging society at large to become involved in education.

However, he says "sometimes I think the government lacks the vision to see that education is something that must be achieved by society and not just by the government.

The ministry of education, Dodge adds, should mobilise the cooperation of maktabs, mosques and other related institutions as well as the NGOs and other communities, not to compete with the ministry, but to compliment its programme to provide educa-

tion for all children. Referring to the general trend of the formal sectors being 'notoriously inefficient' compared to the informal sectors in the country, Dodge laments "so it is also true with the education sector that the teachers' associations and unions have effectively whittled down the amount of time spent in the class room teach-

ing to a bare minimum." Bangladeshi primary school teachers spend only about 440 by SY Bakht health of people.

hours per year in the class rooms compared to 1,200 hours in China, he notes. Teachers in India, Indonesia and other regional countries also spend more time teaching than in Bangladesh.

He also observes that poverty is a principal motivat ing factor for parents to educate their children while pointing out that this is what made the Bangladesh Rural Advancement Centre (BRAC) schools so successful.

"The valuable works done by the Pathokoli Trust is worthy of mention," he says "and I am pleased to see that Pathokoli has survived, though it is much smaller than it was under the former government."

"People who are caught in the vicious cycle of poverty see education of their children as the only escape from it and that is why nearly four out of five six-year-old children are enrolled in school."

However, he says that the

school system needs to be

'dramatically' improved so that

NGOs in their health programmes.

The third programme UNICEF is involved in is in the education sector. "UNICEF was the largest donor in the field of primary education until the World Bank general education project was approved a couple of years ago," he says.

Dodge also has some word of praise for the work relating to children done by the NGOs. He says that the NGOs have done "phenomenally well" and are making a "significant contribution" to the country and the Grameen Bank and BRAC are well recognised around the world for making profound contribution for improving the lives of the people here.

improve the condition of chil dren, Dodge says that there are a number of things the South Asian Association for Regional Cooperation (SAARC) nations could do to dramatically improve the condition of

He singles out the iodation of edible salt as an 'obvious' one, while noting that todine deficiency is a problem in most of these countries and that salt produced in India is sold in Nepal and Bangladesh and some salt from Bangladesh goes into other countries.

"If all table salt were to dated at the salt crusher it would then improve the condition of pregnant women and children dramatically," he

Has the media played supportive role for improving the conditions of children? Are there any areas where more media attention is

"I wish the press were more active and did more ina sustained and qualitative inlarly quality newspaper report ing on issues related to children," he says.

Although, he adds, media support in covering social issues was 'excellent', he hoped that the press would "really get into the education bandwagon and pressure government, religious institutions and NGOs into assuring that primary education is available for every

This was also followed by translations, incorporated into "Pearls from the Indus. Studies in Sindhi Literature (1986)" With these lively portrayals of literary and religious history. Prof. Schimmel has created a body of knowledge that is still vibrant in the modern pluralistic world.

No less distinguished has been Prof. Schimmel's interest in the calligraphy and art of Islam. Her research skills are amply shown in "Islamic Calligraphy (1970)" and "Calligraphy and Islamic Culture (1984)" where her feeling for the multi-layered meaning of Islamic calligraphy as the artistic expression of the printed religious word is quite app-

Prof. Schimmel has, through her colossal works, opened a window of understanding to Islamic culture and its exponents, building bridges across narrow national boundaries and bringing people in the islamic culture closer in an increasingly shrinking world.

The Bonn function also saw Prof. Dr. R. Wielandt of the Department of Oriental Studies at the University of Bamberg deliver an illuminating lecture on the theme "The West and its Christians - a possible dialogue partner for contemporary Muslims?".

Stating that such a dialogue did exist for long time, the professor pointed out, however, to its inadequacy in a post-colonial and post-ideological world that demanded more openness and a capacity for appreciating the position of the other.

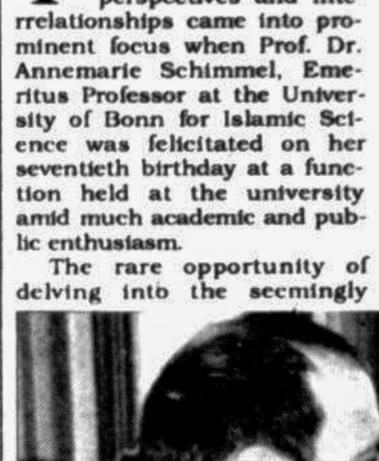

The fact was that Islamic partners operated under quite another paradigm inasmuch as Islam was considered a strong but closed religious faith, with no loopholes, and providing solutions for all of life's problems and situa-

She made it clear. though, that if Muslims were regarded as living an Islamiccentred world, no less was the fact that Eurocentrism had to be overcome too.

On balance, Prof. Wielandt gave an optimistic assessment of the potential for a dialogue between today's Muslims and the Christians of the West in a

continually evolving process. Aptly, the Bonn function concluded with a lilting 'Persian music' recital rendered by Bahman Yasaei and Azita Mostowfi, providing glim-pses of yet another facet of the rich

## DANIDA to Finance Mongolian Education Project

HE Danish International tres through distance educa-Development Agency (DANIDA) has decided to provide USD 1.5 million towards financing a USD 2 million non-formal education

project in Mongolia. The project was prepared by UNESCO to meet the basic learning needs of more than 15,000 illiterate and semi-illiterate Mongolian nomadic families living in the Gobi desert, which covers about one-third of the country. DANIDA informed UNESCO of its decision to finance the project in mid-April.

The Mongolian government, which is carrying out a series of reforms towards a market economy, last year invited UNESCO to study the prevailing situation and suggest ways of reorganizing the education system, as well as prepare project proposals for presentation

to donor agencies for funding. The project offers a onejear programme combining crash courses at district cen-

tion, particularly radio programmes and visiting teachers and specialists.

Teachers and specialists

The Mongolian government, which is carrying out a series of reforms towards a market economy, last year invited UNESCO to study the prevailing situation and suggest ways of reorganizing the education system, as well as prepare project proposals for presentation to donor agencies for funding.

will be trained in non-formal education curricula while appropriate post-literacy materials and teachers' guides will be developed and distributed.

Among the immediate objectives of the project is ensuring that by the end of the year's course, the participants

will have basic knowledge in: - management and accountancy to help them take up new opportunities arising from the transition to an open market economy;

> - improved cattle rearing techniques; - family education, including family planning,

> health, nutrition and hygiene; and - upgrading literacy and survival skills.

The project will initially be implemented in five provinces constituting Gobi desert, where the nomadic families lead a particularly difficult life because of bad climatic condi-

tions and poor infrastructure. More than 20 per cent of the families are headed by single women who have the sole responsibility for the children and the family's cattle, which are the main source of income. Some women have up to six children.

pressive." Dr Kotliarenco says. "It is an urgent task to try and bridge the gulf between formal and nonformal schooling. I believe that this is one way in which we can lower the failure

tary schools" The centres' methodology involves volunteer work by the NIM's team of experts is mothers in their children's educational process. They train for this by attending personal

Mothers Tested as Teachers Our research has demonstrated that children whose mothers play a role in the kindergarten achieve markedly better result," Dr Kotlifrenco says. "Measurement comparing a group of children from traditional kindergartens with a

group from one of our preschool centres, using children with similar potential for intellectual development, show

A programme developed in poor areas of Santiago, Chile, integrating mothers into kindergarten classes as education facilitators, has proved to be an efficient alternative in preparing children to meet the demands of formal schooling.

development workshops where they learn about socialization, health, hygiene, and

The system also requires that the mothers themselves operate their centres. During a centre's first year of operation it is run by CEANIM experts; in its second year, responsibility is shared by the mothers and the experts; and, for the third and subsequent years, it

preschool education process for children from extremely poor backgrounds achieves more favourable results when mothers are involved in the classroom. Studies carried out with IDRC funding show that these children are able to enter formal education under conditions that are more favourable to the teachinglearning and adjustment prothat our children scored much higher in terms of preparation

for the schools system. Mothers in the preschool centres also seemed to find many advantages in this alternative to the traditional education system.

Many said they had difficulty in obtaining access to institutional kindergartens in Santiago, for which demand

Ten years into the CEANIM project, 15 centres are now in operation under the direction of "The educational results of mothers as "education facilitators." the preschool centres are im-

the CEANIM centres are located within their communitics and in the immediate vicinity of their homes makes them all the more convenient and accessible.

They also pointed out the low cost factor: in addition to their obligatory period of duty once a week in the kindergarten, each mother had to bring cleaning supplies only once a month. Other advantages they

mentioned included the opportunity to participate in the care of their children. Mothers found this infinitely preferable to the formal system where, they said in effect, "you don't know what they teach or how they treat your child."

"In addition to being here with the children, we also learn to educate ourselves along with them," says Lorenal Pacheco Caceres, a young mother in the Cardenla Caro CCAP, located in one of metropolitan Santiago's poorest and most deprived slums.

Most mothers said that this type of system provides them with a great sense of personal fulfillment and development. They acquired new knowledge about children and have sustained higher levels of communication with their children at home.

"We learn in another way and grow along with them, adds Mrs Caceres. "We discover many things that we were not aware of before, in terms of caring for and educating our children. We also learn about health, education, and proper diet as well as how to get along with the other mothers and we develop greater self-confidence."

CEANIM, for its part, has branched out in other directions, introducing the CCAP experiment to the other sectors of society with varying degrees of success.
