

T is not necessary that the daughter in-law is always humiliated, criticised or treated with contempt. One knows of a case in Tikatully, where the daughter in-law simply stayed on the third floor, with its roof garden. played with a miniature puppy dog, listened to music, and watched a TV of her own. while her husband was abroad studying. She never came downstairs to help with the housework; and was dressed to kill in all her finery, when asked to meet the occasional,

One knows of similar cases in places like Mohammedpur, Moghbazar and Dhanmandi where the daughters in-law are so conscious of their looks and the rich dowry that they have brought with them, that they leave the upbringing of their child to the grand-parents. and at best, accompany the child to school and back. They spend hours at the beauty salon and in window shopping, if not actually marketing for elothes, shoes, lipstick, perfume and what have you.

I know of another case where they adulated and pampered the daughter in-law to such an extent that even though she had her own cosmetics, she would not hesitate to use those of her mother inlaw's and to slump flat on her mother in-law's bed, whenever she was in a mood. The family would always keep the best "sari "or "shalwar kurta " for this daughter in-law, who had not much to do, as there were always regular servants in the house. She broke the hearts of the in-laws when she coaxed her husband to have a separate home. The mother in-law had been a widow for twenty years and one can naturally understand how attached she was to her eldest son. The daughterin-law still visits the home but he behaviour is like that of a gu st and little more.

Bangladesh, as in other parts of the Subcontinent, the position of the daughter in-law is sometimes precarious and even pitiable. One knows of a case in which the pregnant mother was given nothing else. to eat except fried bitter gourd and rice. When her husband left a little money she would have to cunningly hide it, and buy a couple of biscuits on the sly from the passing "ferrywalla". Sometimes she bought balls of "muri" and "gur" and she would have to suffice on that. If she dared to comb her hair before the mirror, her inlaws would scream out in unison,"We don't want a dressing table 'bau".

Yet in most cases in

for their son with ease, but I will be nothing but an embarrassment for my own family."

Another daughter in-law says, "It is so hard to please the in-laws. They do not like you to read or listen to music or watch television. They will not let you take up a part time job and feel that a woman should be confined to the four walls of the home, feeding her

goad me on to take a divorce. My sister tells me that they would never have done that to their own daughter. Instead of pactfying me, my in-laws encourage me to nag, talk back and even have physical encounters. I don't even get to go to parks the seaside or see a film. My husband has a limited social life. He complains about every bit of money that is

Parents make innumerable sacrifices to make sure that the daughter is adequately educated, trained, and provided with a reasonable dowry before getting her married. They do without many luxuries and even necessities — going without fine clothes, a car or servants. Yet when the young woman goes to her in-laws she is often plagued with situations that she can barely handle. The fairy-tale ending of "and they lived happily ever after" appears too simplistic in some cases.

a family of her own while she got her three sisters-in-law married in Dhaka with money that she had earned in London. She also educated her two brothers in-law in USA, apart from sending money to the retired and needy parents in-

There is the case of another daughter-in-law, who spent her time in cooking and clean-

husband, cooking, and dusting, and looking after the children. You have to tolerate the male temper and when the in-laws visit you, you must have trays of goodies to please them, and let them rattle on for hours about one thing or another, although you yourself might be tired as all hell. While you give them

expensive presents for Eid and

birthdays they will invariably

spent on the children, while my in-laws look on indifferently or simply advise me to pack up and go back to my parents with my children."

I know of another case of a daughter in-law, who had to pay rent and money for her and her husband's upkeep at the in-laws. One day she came home from the university, where she studied, to find that

ing for the joint family from dawn to dusk and beyond. The family has money of its own but feels the daughter in-law should be kept occupied. "Even the servant in the house is treated better than me because my mother in-law knows that she will bolt if she is not treated with kindness and consideration. Whereas, if I leave with my two young sons , they will find a second wife pretend to take my side and This young woman dared not the vicissitudes.

give you something that tells you that it is not from the bottom of the heart, and that it was simply given because something had to be placed before you in exchange of the effort you made and what you

Yet another married friend has this to say about her inlaws "Whenever there are fights with my husband, they

all the fine "saris" that her mother had given her had disappeared. She first suspected that the servants had done the mischief and when she went to report to her mother in-law, she discovered that it was the mother in-law herself who had removed the clothes. "You can only get them when I give them to you, when you go out". were the dictatorial terms.

bring her friends to the house because there would be discussions and laughter and her mother in-law could not tolerate this. They had to dine at a specific hour, and if the couple missed it for some reason or another, they would have to go hungry to bed

Another young woman tells of how she would stitch and embroider clothes for all her four sisters in-laws and their children, do their hair and make up , help with the cook ing and dusting, and yet when the erucial divorce came, none of the in-laws were of any help. and today put all the blame on the woman. This is even though she worked and sent her husband abroad with her savings and there was question of neglecting her children. The mother in-law could never stand her, and always gave her the smallest pieces of fish or meat at meal times.

When the fate of the city dwelling wives is often so lamentable you can envisage the situation of the village woman, who cannot take a rickshaw and visit her friends or family. Her fate is sometimes worse than the domestic animals, who are gently fed and tended. She has to bear the children according to the whims of her husband, cook, clean, make "pithas", "pickles" look after the kitchen garden: tend to the animals like the cows and the goats; catch fish to supplement the food in the house; do sewing and mending: making of "patis" for sale: and prepare all other goodies for the inmates of the house which include her in-laws.

What about the men in our society? They are the lords of creation, as elsewhere in the Subcontinent, and even in the west. They are treated with the best of food in the house of the in-laws, and everybody is there rushing to please them. and they treat the daughters badly. Yet, there are cases where the in-laws have created havoc in the normally placid home and caused conditions in which the husband and wife live apart or where the wife stays with her mother for weeks on end, much to the annoyance of the husband. This often happens if the wife comes from a well to-do snobbish family and tends to be in different or to have contempt for the husband's family.

All said and done marriage may sometimes be seen as a strange gamble, specially for the women. It is like putting your hands into the sea - you might get a pearl or have your hands chewn off by a shark. Fortunately most marriages in our country pull along, despite

HIS refers less to chronological age than to the teacher's wisdom. In spiritual terms he or she is your elder and thus your

teacher. The martial art Sensei is very much like the Zen master. He has not sought out the student, nor does he prevent him from leaving. If the student wants guidance in climbing the steep path to expertise, the instructor is willing to act as a guide on the condition that the student be prepared to take care of himself along the way. Women and children are given extra care and more time. If the student has the necessary dedication and the leader provides the proper spiritual inspiration, then the meaning and essence of the martial arts will finally reveal itself.

with certain thrombo-embolic

and heart diseases).

5. Tetracycline group of antibiotics if given to a nursing mother, the drug comes to the breast milk causing permanent staining in baby-teeth. Other antibiotics are known to be safe. There are some antibiotics like Streptomycin, Kevamycin which readily pass in to breast milk but are not absorbed from in fact govt-but their persistent accumulation in the intestive causes destruction to the normed flora (bacterias those produce vitamins) and induces harmful

effects on immune system. Some drugs taken by nursing mothers that are not generally considered to be harmful to the infants in optimum does include Insulin (for diabetes) epinephrive, alcohol, caffeine, but their large doses may af-

fect the infants even, after breast feeding. Some of mothers do have the habit of smoking tobacco regularly now it is more or less obvious that their breast-fed children will have retarded growth.

Nutritional status and the sick

It is not uncommon to find that mothers are constantly deprived of balanced diet resulting in production of breast milk in low amount and relatively lower quality, e.g. a mother having deficiency in vitamin B (Thiamine) may lead to the onset of beriberi in the

facts dependant on her breast milk. Even if the mother's diet is adequate, breast milk may remain deficient in flouride, because its

lower passage to breast milk. causing weaker dentition of teeth, mothers suffering from jaundice due to hepatitis-B may be source of infection to their breast-fed children.

Late weaning problem:

From the fourth month of age, children should be supplied with additional other foods along with breast feeding and a complete weaning (discontinuation of breast feed) should be done by 18 to 24 months. In developing countries, particularly in moral areas, majority of the babies tend to cling to breast-feeding up to the age of 3-4 yrs. In fact such late weaning prohibits the intake of balanced food and creates gross malnutrition. (Concluded)

## For Children's Parties

Chocolate Golliwogs

orange jelly

bananas 2 level tablespoonfuls custard

level tablespoonful cocoa pint coffee

pint coffee OZ. SUIGHT

A little whipped cream

Make up the jelly to just under I pint, and set in individual dishes with two-thirds of the bananas, cut into slices. Allow to set. Mix the custard powder, cocoa and sugar together and blend with a little cold milk. Mix the rest of the milk and coffee together, bring to the boil, pour on to the blended custard, return to saucepan and botl I minute. Allow to become almost cold. then pour on to the set jelly. Set aside until quite cold.

Cut the rest of the bananas into slices to form eyes, pipe cream on top and place a currant in the centre to complete eye. Use the rest of the cream to make the nose and mouth. Serve quite cold.

Sponge Sandwich

4 oz. flour 4 eggs 4 oz. castor sugar

Prepare two 7-in. sandwich tins by greasing and flouring. Sieve the flour. Break the eggs into a basin and whisk. Add: sugar, and whisk over pan of hot water on low flame until the mixture is thick and creamy and will retain the impression of the egg-whisk.

Delicious to eat and easy to make

Remove from heat. Beat for a cake and sandwich together. few minutes until cool. Fold in flour quickly and put into sandwich tins.

Bake in quick oven for 10 minutes or until cooked. To test, press gently with finger. If impression remains, the cake is not ready.

Suggested Fillings Coffee butter cream and

raspberry jam. - Spread one cake with thick layer of raspberry jam and the other with coffee butter cream.

Orange and cream. - Whip small-size carton of double cream. Add grated rind of 1 children. or nge: Spread half on each

Chinese Wakana Restaurant

It was my second visit to the Wakana in three weeks. Our party of six was greeted with much bowing by a vanguard of waiters, then promptly shown to a private room decorated with an inter-

unfamiliar with Japanese dishes, however at length rough descriptions can be obtained which makes ordering unusually entertaining!

The highlights of our meal were 'Kakiage', crunchy tem-

pura shrimps, 'Maguru Sashimi raw tunny fish, both of which were served with different 'Wasabi', a horseradish sauce varying in strength and . colour from the mild white to the absurdly strong green. Sumashi Jiru', a spicy clear soup and my favourite; Nataane', cold octopus and spinach salad which unfortunately consisted of only three or four mouthfuls.

As is the case with Japanese good, part of the pleasure is visual: at the Wakana this was clearly so!

After enjoying a delicious and authentic Japanese meal complete with Sake, I visited the kitchen to find Kazuyuki Matsuda, the chef, who via his Japanese speaking Bangladeshi interpreter, conducts the cooking. The system seemed slightly chaotic, but the authentic and aesthetic Japanese food proved it worked extremely well!

The Wakana is expensive by Dhaka standards but one enjoys more than an ordinary meal: it si surprising entertainment built around a meal!

## Body Maintenance

has convertible, easily digested protein. plus a lot of things not found in meat. This is in the magnesium area which is good for nervous energy, good for brain function, concentration, studying, that sort of thing. Honey: Still the easiest to

absorb and process of any natural sugar, and it has one extremely important function: it enables your body to sue calcium correctly. Most of the things that go wrong in civilized living start

with calcium levels. Either they are too low, you cannot steep, your nervous energy drops, your skin starts to pack up, your muscles sag. Or you get the other side of the pattern: calcium builds up

and your body loses its ability to handle it properly. So you get arthritic joints, stone formation, kidney stones, gall stones, this type of thing. And you get heart damage, calcifieation of the arteries. What honey does is preserve

calcium. It makes sure your body can handle every bit of calcium that goes in. Dentists are taught that it is high in sugar (which it is) and once it hits the saliva it starts to corrode tooth enamel. They say don't give children honey, it is a bad thing.

But it depends what else the child is having in the diet. It also depends whether they have honey in such a way that it is removed fairly quickly from their teeth, which means having something to drink afterwards, or cleaning teeth.

Honey is also the best preservative in the world, it is believed, "If you put something in a jar of honey it will never go bad. For example, you can cut up a clove of garlic or an

onion and cover it with honey for 24 hours. "Absolutely everything ex-

cept the tissue is extracted and goes into the honey. This is good for sore throats, for children with tonsillitis or infected throats, in fact any sort of infection in the body that is giving off heat, temperature, or inflammation. The thing to do is chop up the garlic and a couple of onions or shallots, pop it into the honey and eat it a day later."

As for those who say they will put on weight if they eat honey the answer is not necessarily casy
