labour market have

been identified in two

World Bank Reports (Country

Economic Memorandum '92

and '93) as having crucial

bearing on industrial growth

and external competitiveness

of Bangladesh. The first

concerns the rapid expansion

of labour force and the decline

in the modern sector employ-

ment in the 1980s. The

second is the centralized pro-

cess of wage determination

(especially in the public sec-

tor) which is argued to have

led to increases in labour costs

unmatched by productivity im-

provements. The third issue

relates to the antagonistic rela-

tionship that exists between

management, trade unions and

the Government which are di-

rectly and indirectly impeding

industrial growth, discouraging

private investment and ham-

pering public enterprise re-

forms. The World Bank, there-

fore, suggests the need for in-

troducing labour market re-

forms in Bangladesh for pro-

viding support to other eco-

nomic reforms to have their

# Privatization in Bangladesh: Some Reflections

by N Ramachandran

World Bank, Washington, D. C.

HE World Bank's Country Economic Memo of March '93 entitled Implementing Structural Reform" has dealt with the need for privatization, the experience with earlier privatizations in Bangladesh and the on-going privatization programmes, particularly in the Ministries of Industries. Textiles and Jute. I intend here to focus my comments instead of some of the more recent issues that have risen in the pursuit of privatization in this country.

First, there is concern about the slow progress of privatization. In October 1991. the Government of Bangladesh identified 40 industrial enterprises as well as 10 textile mills for the first phase of privatization. Of these, sale of 6

across opportunities for new

employment and causes im-

pediment to industrial growth.

in Bangladesh manufacturing

sector is one of the lowest in

the Asian countries. In 1989.

the wage level in the manufac-

turing sector of Bangladesh

was about 10-15 times lower

agricultural workers still re-

main outside the purview of

trade unions and do not enjoy

the benefits of wage commis-

workers and the private sector

workers find it difficult to re-

cover from their employers

- Except the wage employ-

compensation for loss of ser-

ees in the formal sector, the

vast majority of the workers in

the unorganized sector are at

the mercy of the employers

who tend to violate the provi-

frontational labour-manage-

ment relationship which is

seriously impeding industrial

growth and employment ex-

pansion in Bangladesh needs

to be urgently improved. Two

important issues deserve at-

support provided through nu-

merous laws and regulations,

the labour relations system in

Bangladesh has proved inade-

quate to develop a spirit of co-

operation among the manage-

ment, the workers and the

Government.

— There exists a credibility

gap and a sense of mutual trust

between the parties concerned

which tends to vitiate the envi-

ronment required for initiating

an effective dialogue, let alone

sion recommendations.

- The present wage levels

units was completed by sale to a state-owned insurance company and only three other units have so far been privatized. To some extent the lack of progress could be attributed to delays linked with the changes in the institutional arrangements for privatization from an inter-Ministerial Committee on Privatization to a Privatization Board. The discussion today will no doubt throw some light on some of the other reasons for the slow progress. But let me here refer to two related aspects.

One is the perception that the sales process is not adequately open and competitive. This perception has given rise to complaints and these have often slowed down the progress of privatization. To

Shamsul Islam, Commerce

Minister: In developing coun-

tries and perhaps also in de-

veloped countries, policies and

their implementation are a

major development hazard. It

becomes worse when develop-

ment policies are perceived to

be external conditionalities.

Added to these issues are con-

ceptual and designing inade-

quacies in what are known to

be structural reforms. Anything

which seems to be sound in

address this issue the whole process of privatization should be made completely transparent. A related issue is the need for competent professional advice in the preparation for sale and valuation process. Where it can be firmly established that a state enterprise has negative net worth, some "financial engineering" will be inevitable (mainly through the Government absorbing some proportion of the outstanding liabilities) if the enterprise is to be made attractive to buyers. However, this assumes that the industry in which the enterprise operates is basically sound. If the industry is not viable, the enterprise should be liquidated, not privatized.

The privatization programme I have mentioned so

theory can be difficult to be implemented in reality. In this perspective, implementation of structural reforms is diffi-

end in itself but a means to an end. Its justification is creation of liberal and pluralistic world economic order and closer integration of the developing countries with the world economy, helping their export, getting better terms of trade and so on. It is necessary to review progress on this account also. Progress of reforms in developing countries in areas like fiscal, monetary, trade, prices policy and in fact sustainability of reforms depends upon how well the developing countries can avail of the opportunities offered by external markets. Stable economic growth and macro economic equilibrium can be sustained if the prescription yields the desired results. It is no point of having learned doctors and a comprehensive prescription if the patient does not make recovery at expected rate.

far refer to the divestment as pect. A second aspect of privatization is the introduction of private sector competition/collaboration in areas. such as power, petroleum, gas, telecommunication and transport where the State has hith erto been dominant. Private sector participation could take various forms such as man agement contracts, lease build-own-operate and build own-transfer arrangements. Progress with this aspect of privatization will depend crucially on foreign capital and know-how. In some of these sectors there have been encouraging developments. Foreign participation in telecommunications may either take the form of a joint venture or a new privately-owned company which would compete directly with BTTB. Telecommunications could then become one of the most attractive candidates for private investment in infrastructure. Structural reform is not an

Similarly, some progress is being recorded in the restructuring of the gas sector. In June 1993, the Government decided to permit the negotiation of agreements with international oil companies, with tax exemptions and with the linking of gas producer prices to international fuel prices. Exploration blocks previously reserved for Petrobangla have also been opened up for private budding, and agreement reached to establish a separate, commercially oriented Gas Transmission Company.

In the power sector again GOB is moving in the direction of a larger role for the private sector. The privatization components of the Government's programme include the restructuring and corporatization of the Bangladesh Power Development Board and Dhaka Electricity Supply Authority.

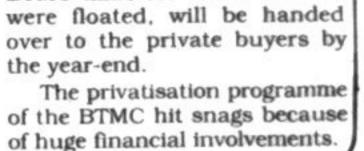

Generation, transmission and distribution are to be separated into autonomous commercial entities. Together with this a policy frame-work is to be defined for encouragement of private participation in power development. In carrying through with these reforms the Government has the opportunity to demonstrate its commitment to transform the present government-dominated inefficient arrangements to a competitive system which could deliver more reliable and less costly power to users.

Privatization is a costly process. The cost includes separration benefits for state enterprise employees, financial restructuring of state enterprises before sale and expenses of managing the programme. Fortunately, Bangladesh has a good measure of donor support

 over Tk. 1,500 crore is pc)tentially available - to suppliement the Government of Bangladesh's own resources. Offsetting these costs to the: Government will be the elimi, nation of losses being incurred by state enterprises as well as the expanding revenue base from a growing vibrant priv ate

## Continued from page 8

14) Meanwhile, the most potential bidders for the just and textile mill privatizations would be existing jute and textile mill owners, but the Government is busy saddling these units with huge liabilities from the past, so that these potential bidders are

15) Retrenchment and labour management issues are overplayed in the Bangladesh context - it is usually much more a problem of availability of cash for retrenchment benefits ernment can cough up more easily); otherwise, private management can handle it quite efficiently.

16) The problems with previous privatizations stemmed largely from a dysfunctional environment. It is hoped that the current environment is better and will continue to improve as far as Government disengagement goes. This would automatically improve the success of the privatization programme

Bangladesh's financial system is critical to the success of the economy, but is proving to be a drag on economic activity. There are serious problems with the banking sector and its regulation by Bangladesh Bank while the capital market is also moribund. Within the banking sector; the Government owned units comprise by far the larger share of the market and are in especially bad shape, particularly the NCB's and DFTs. The legal and regulatory frameworks are being streamlined, but the NCB's and DFI's themselves have to be made more accountable, ultimately through privati-

ful privatization depends above all on a political consens us. It rests with the Government to work towards such a consensus. A lesson we learn fr om the project is how a national condebate of the underlying isought to be the realization that privatization is not a problemfree process. There will be restate enterprises may look dis-

State Minister for Textiles, Abdul Mannan: The privatisation programme has become a political compulsion for the government. Today, when the economy is at crossroads and all set for a take off towards a decontrolled economy, the government should act with all sin-But a weak capital market

and the existing socio-political realities blocked the privatisa tion progress. The market limitations and public attitude to wards privatisation also hampered its pace.

Past experience shows that the public sector textile, mills had been handed over to their former owners, but the government could not realise the dues from them.

The government would now

### we stopped debating over the need for privatisation and reach a consensus for the process to start. the opposition, both inside and outside Parliament, on the is A serious dialogue is needed between the treasury bench and

**Economic Issues** Continued from page 8 Jatiya Sangsad have major roles in this regard. Resource persons from trade bodies, research organisations, bar accountants, trade unions should, in our view, be utilised by the House Committees to enforce accountability. We often lament about our colonial administrative legacy, yet the British civil service has itself undergone reforms of far reaching nature. by requiring the autonomous agencies to financially fend for themselves, enforcing accountability to the public through citizen charters and requiring the administration to support entrepreneural spirit within and outside the

Finally, efficient reforms are not politics - neutral. A democratically elected Government and the major opposition party between them carry the will of the people. Any consensus. stated or unstated, between them can give favourable economic signals and help achieve a quantum leap in economic growth. Self-sufficiency in food, increasing Policy de-regulations, continuous fiscal reforms, fall in the rate of inflation, rise in foreign exchange reserves, convertible Taka and rising exports have all been working to improve the base for accelerating the implementation of structural reforms. I would like to end, by posing the question - should politics come in the way, and economic development be the casualty of political churning?

### Towards More Competitive and Efficient Labour Markets T is now commonly recog nized that inefficient wages ▲ policies and contentions labour - management relations

are important causes of high private sector costs which discourage private investment and employment creation. I would like to dffer the fol lowing four items as the priority areas of labour market reform i) improving labour market information; if) accelerating regu latory reform and institutional strengthening and; iii) developing manpower skills; and (iv) establishing a social safety net Improving labour

# market information

The need for effectively moni toring labour market development can hardly be overemphasized in a country like Bangladesh where manpower is the most abundant resource. Besides, since labour market development has an important

Former Deputy Prime Minister and Industries Minister Jamaluddin Ahmed: Reforms have been going on for a while, only the 'structural part is the new angle added to the 'reforms'. The World Bank not too long ago was a propagator for public sector investment-there were four massive investments in the public sector during the 1976-81 period when I was the industries minister and four fertiliser factories were built. We tried to create a

vibrant mixed economy. Too much of reforms too than good and is going to destroy us. Is there a vibrant private sector in the country? Is there a private sector which can buy the Khulna Newsprint Mills? Too much is being expected of the private sector. By all means we should deregulate and liberalise, but we have to take all internal factors into account. We are talking too much about the macro-economy but unless something dynamic doesn't happen soon in the micro sector, the macro sector would collapse.

conductve to the development of mature bilateral relations between employers and trade unions. In fact, through SKOP. trade unions are often tempted to by-pass the formal bargaining machinery and to deal directly with the dominant player, the Government, by threatening nationwide agitations. Therefore, as a first and important step, there is a need to eliminate the government's direct role in labour management issues. At the same time, steps are needed to strengthen conciliation services, and the process of collective bargaining, and re-

### Regulatory reform The basic characteristic of

Bangladesh's system of industrial relations is the predominant role played by the Government. The excessive government involvement in labour issues has not been

soon is going to do more harm

### unions. Developing Manpower Skills

As mentioned earlier a key

duce the multiplicity of trade

ingredient in determining labour's productivity is the level of the skills, it has to offer. In this regard the German experience illustrates the advantages developing a public and private partnership in ensuring high worker productivity, through skill training. Although Bangladesh has a fairly extensive public sector supported system of providing vocational training, through its network of 12 Technical Training Centres (TTC), the quality of training leaves much to be desired. There is, for instance, an urgent need to improve both the basic vocational training policies, to

facilities. Above all, there is a dire need to promote closer linkages with employer's in determining skilled manpower needs and assisting the private entrepreneurs to provide inplant skilled upgradation facili-Social Safety Net

revise the dysfunctional cur-

riculum, and upgrade the badly

run-down technical training

### In Bangladesh, as in almost all other developing and developed countries, labour policies

Former MCCI president Salman F Rahman: The Ultimate objective of the economic reform programme is poverty alleviation. The debate should be on how to get out of this poverty trap. Creating employment opportunities through industrialisation is the only way. But who is going to do the industrialisation - the private sector, or the public sector, or

And not only are economic reforms needed, the non-economic reasons also need to be tackled; like the law and order situation, labour-management relations and perception of political instability. How far have we succeeded in achieving political stability?

The lack of investors' confidence is yet to be built up and if it is not done soon there would restructuring. be serious consequences. There should be a level play-

ing field for all domestic industries - same basic infrastructure and utility services - and the reduction of protection and quid pro quo should be done simultaneously.

You create an enabling environment and the private sector would be there. We have proved in the garments sector. The entrepreneurship spirit is very much there in the private sector. To tackle the apprehension that the private sector would not behave responsibly, the existing laws should be applied and adequate legal frameworks must be created and made transparent.

The capital market, which can play a major role in economic development, is a neglected area in the reform pro-

non-starter for obvious reasons. The privatizations should instead be pushed through, doing whatever financial restructuring is justifiable on the simple criterion of a better net price realization for the Government (for example, bids could be sought on two bases -with/without debt). If it is easier to sell off the already profitable/viable units. they should be sold off first, so that the privatization programme gains momentum.

pushed out of the picture.

(which presumably the Gov-

zution. The capital market has to be invigorated through appropriate measures.

**Current Issues** The publicly owned entities,

DFI's, NCB's, ICB -- are in a comatose state. What are the symptoms leading to this diagnosis? 1) Cumbersome procedures - either there is a very slow response to proposals or no response at all. Files are expected

to move not because of the quality of the proposal but for other factors. Nobody in the management chain wants to take any positive decision (a negative one is always the easy way out) i e the "buck" stops nowhere. There is no appreciation of the value of time. 2) A demoralized and under-

paid workforce. The DFI's are shattered, while the NCB's are bearing the brunt of widespread criticism and scrutiny. The senior management is handling crores while attempting to live on peanuts. Performance related promotion is not clearly established. The net result is that these or ganizations are basically all set for doing nothing. 3) Huge losses and non-per-

forming loans. Poor financial evaluation, directed credit, political interference, bad overall management and sometimes willful default have resulted in serious financial crisis, which in turn is raising the lending rates required by the banks to maintain their 4) Excess liquidity. Because

of their inability to lend their substantial deposits (built up as a result of good real rates of return to depositors and the security of a Government bank). NCB's have: accumulated eash which is costing them. 5) A lack of good financial

analysis capability. There are hardly any chartered accountants or qualified financial analysts who can evaluated proposals, especially medium and long term credit facilities. This is further compounding the problems of lack of investment and excess liquidity.

The cure in two-word is performance accountability, from the top downwards. While this is usually achieved by privatization, a viable first step towards ultimate privatization could be to break up these NCB's into smaller units.
