PROSPECTUS

APEX WEAVING & FINISHING MILLS LIMITED

Productivity Consultants (APC) The main factory building covering about 160.000 sft shall consist of (1) Weaving section (II) Printing. Dveing & Finishing section (III) Sizing & Warping area (IV) Yarn godown (V) Boiler room (VI) Flectric sub-station (VII) Finished goods godown (VIII) Stitching section and (IX) Office. In addition housing of labour, under ground and overhead tank, boundary wall, internal road, sewage and other facilities will also be constructed.

6 MACHINERY AND EQUIPMENT:

Total cost of the machines of the project is Tk 44.91.48,000 00. Out of which L/C has been opened for 10 million NGL. Which is equivalent of Tk. 22.00.00,000.00 (approx). This includes total Finishing and Printing Unit Machines.

Weaving section: The weaving unit will be equipped with SULTZER shuttleless projectile loom of 100" to 130" working width. These looms will be obtained from a running factory and will be reconditioned before delivery. These loom are expected to have an economic life of over 25 years. The sizing and warping machinery will also be obtained from the same factory. The sponsors have signed a contract with a factory for these machinery.

Printing, Dyeing & Finishing section: All the machinery of this section will be procured brand new. This section will consist of singeing & desizing machine, continuous open width bleaching range, stenters, rotary printing machine, high temperature loop ager, colour kitchen, rotary engraving system, dark room equipment, image processing system. Open width jet dyeing machines. Open width jigger dyeing machines, laboratory equipment, calendering machines and all necessary auxiliary equipment.

Stitching section: All equipment for the stitching section will be procured new. It will consist of about 100 stitching machines, cutting machines, irons and folding machines.

Utilities: The project will have four 450 KW gas generators for prime power generation, a 10 tons/hour steam boiler. 2 million KCal/hour oil boiler. 25 cuM/hour process water treatment plant, 100 HP air compressors and 25 cuM/hour waste water treatment plant.

7 ERECTION AND INSTALLATION: `

The Weaving and Finishing machinery will be installed and commissioned under the supervision of technical experts from the machinery suppliers. They will be assisted by a team of local technicians and skilled workers. Several foreign technical experts will be brought in for testing, training and trial run. The project consultant will supervise the erection, installation and trial production. The technology involved in the stitching are already available in the country and thus will not require any foreign technical experts.

8 RAW MATERIALS:

The raw material for weaving unit is vari, which is an internationally standardised commodity and are available from many foreign and local sources. The raw material for the finishing unit are greize fabric, does and chemicals. Does and chemicals are also internationally standardised commodities with many sources. However, greige fabric is not an internationally standardised commodity and the supply sources are limited with three main suppliers, India, China and Pakistan. At present Pakistan is a major supplier of greige fabric.

9 TECHNICAL STAFF AND PRODUCTION WORKERS:

During the first two years of operation of the project, the total manpower requirement is 668, of which 536 persons would be associated directly with production. 75 persons will be associated with maintenance and 57 persons will be technical and administrative staff of the company. The sponsors have already entered into contracts with all the major machinery suppliers for personnel training at the supplier's factories and as well as at the project during and after installation of the machinery. Foreign training will be conducted for a period of 6 - 10 weeks and local training will be conducted for 3 months. In addition, the project consultant will be retained for at least one year after commencement of commercial production.

10 TRANSPORT:

For carrying raw majerials and finished goods, the project plans to use hired transport services. However, for transporting small volume of raw material, machinery, parts etc. the project will procure two pickup vans. In addition for transporting company staff and for day to day operations two micro buses will be procured.

II THE MARKET :.

The growth rate for the global textile industry is estimated at approximately 2% annually up to the year 2000. Of the total world manufactured exports, world apparels export constitute only about 5%. Western Europe, North America and Japan have been experiencing a negative growth rate in apparels during last several decades. On the other hand, exports of apparels is very important for the economies of the developing countries. For example, in 1991-92 Bangladesh exported apparels worth Taka 40 billion, which is approximately 54% of Bangladesh's total export earnings.

Up to the middle of 1980, the big four East Asian suppliers of apparels had been Hong Kong. Korea. Taiwan and China However the dominance of the four suppliers are on the decline. The general trend and expectation is that there will be a natural evolution away from the high concentration of apparel exports from the newly industrialised countries to the developing countries like Pakistan, India. Vietnam, Sri Lanka, Bangladesh.

Bangladesh has several advantages which clearly enhances its competitiveness. Bangladesh has one of the cheapest sources of labour and cheapest energy source as compared to other potential textile nations. One of the biggest advantages of Bangladesh is that there are no quotas for export of fabric and yarn any where in the world. Western European countries accord liberal treatment to imports from Bangladesh through the Generalised System of Preference (GSP). This allows up to 15% tariff-free entry of imports, provided the product has gone through at least three stages of production in Bangladesh. With GSP benefits, Bangladeshi products will be very competitive in price, provided the high quality standards can be maintained. This puts it at a much more lavorable position than its main competitors India and Pakistan.

In both USA and Canada, 10% of the garment quota is reserved for garments made from locally produced fabrics. However, garment makers are not able to utilise these quotas fully because of an inadequate supply of good quality, locally produced fabrics. Nevertheless, the reserved quotas have encouraged garment makers to increase their usage of domestically produced textiles implementation of GATT will require that garments exported from Bangladesh undergo at least three stages of production. In order to continue to export garments and textiles under GATT rules and to increase the benefits from the export of apparels. Bangladesh must create backward linkage industries to production of fabric and yarn. Bangladesh Government has also been encouraging entrepreneurs to set up fabric manufacturing projects.

For Home Textiles, Bangladesh is one of the Liv lew non-quota exporters to all the developed countries. This status puts Bangladesh in a unique position to develop its Home Textile Industries to an international standard. At present, there are only two Bed Linen finishing factories in Hangladesh producing about \$0,000 meters of finished fabrics per day from greige fabric from Pakistan. Both the projects are booked with export orders for the next several years.

Sponsors performance and Market Outlook

The sponsors of this project are already managing three 100% export oriented projects, viz. Apex Foods Limited (AFL), Apex Spinning & Knitting Mills Limited (ASKML) and Amam Sea Food Industries Limited (ASFIL) in Bangladesh

AFL, a public limited company has an annual export turnover of US\$ 21 million. It is one of the largest exporters of Frozen Foods to the markets of North America. Europe, Japan and newly industrialised countries. AFL has received several recommendations and trophies for product quality and export turnover. Most recently, it has received the President's Export Trophy for 1988-89, awarded in 1993.

ASKML, also a 100% export oriented public limited company, is a vertically integrated knitting. Dyeing, Finishing and Garments factory. ASKML is exporting to the markets of North America and Europe. The projected yearly export turnover of ASKML is US\$ 10 million.

ASFIL is a recently acquired Public Limited and DSE listed company. The project was in the sick Industries list for several years. After investigation and analysis the sponsors have taken over ASFIL in October 1994. ASFIL has already started full production and export.

All three companies are listed with Dhaka Stock Exchange and the share price has highly appreciated.

Based on these and other business relationships, the sponsors have created an extensive marketing network in the developed countries, which are also the potential markets of the proposed venture. The existing marketing collaboration of the sponsors in these countries will serve as the distribution network for the products of this project.
