came to a decision that there is bright prospect of suuflower cultivation in southern parts of the country as the soil of these area is suitable for the kironi variety of sunflower seeds, the

In these area, land on average one thousand 8 hundred kilograms of sunflower seeds was procured from a hectare and 40 to 45 per cent of oil was procured from the seeds, the source informed. Sunflower oil is very good in quality as edible oil. It is useful to human health as it does not contain 55 per cent. Lemonic acid which is hazardous to our health. Even there is no harmful erosic acid. That is why even the patients who have been suffering from heart diseases can use it without hesitation. The source said that in mustard oil, a good percentage of erosic is present.

The Agriculture Extension Department recently distributed a good number of locally produced sunflower seeds alongwith imported improved variety of intermixed sunflower

The source also informed that about 4 lakh 1 thousand 5 hundred metric tons of edible oil is required to meet our daily need at the rate of 10 grams for each person. But now only one lakh 35 thousand 7 hundred 85 metric tons of oil is produced in our country which is too little to meet our necessity as mustard seed is the only source of producing oil. Rest of the quantity of oil or oil seeds would be imported from abroad, the source added.

Recently, Agricultural Exension Department has signed

65.82 per cent for BAU 27.49

for CU and 195.98 for JU. The

Vice Chancellor said that thus

it is clear that the RU has be-

came the victim of governmen-

tal disparity in getting funds as

well as university grant com-

mission. As a result, last sev-

eral years the science depart-

ments of RU are not getting

Possibility of discovering ancient village in Kurigram

KURIGRAM, Feb 4: It is believed that there might be a pucca building 15 or 20 feet beneath the earth at Jogirbhitha under Belgacha

union of Kurigram Sadar thana. While sinking tubewell pipe; the echo of the underground roof of a certain building could be heard. The location, height of the ancient village, its natural surroundings, the innumerable pieces of bricks and utensils strewn all over the 'bhitha' bear testimony to the inference that about two hundred or three hundred years ago, there might have been human habitation around the locality which had been lost by the onslaught of severe earthquake or other calamity, without leaving behind any historical record whatsoever.

Knowledgeable sources expressed that there might be hidden treasures like Iron-safe containing gold coins or ornaments which could be found out by excavating.

Mostafa Tofael Hossain, a rising poet of the 'bhitha', Md Abul Hossain, their father and uncles faintly recollected that in 1958, a deep ditch was covered up by trees and earth.

That ditch is still believed which is supposed to be a point, where there was an iron-safe about seventy vears back. Their grandfather, made

From H B'Khan an attempt to dig out the antique iron-safe, but supernatural agents intervened and they storm was raised all of a sudden, and those who were engaged in digging had strange dreams, and suffered from various deadly diseases leading to

deep forest where wild animals like tigers and bears dominated, habitation. failed. It is reported that a 'Grandfather of Mostafa Tofael Hossain and Md Abul Hossain. late Fazal Uddin, was an energetic and brave men who steered clear through the bushes and made it worthliving. He died about sixty years

Structural, administrative changes needed to make sugar mills profitable

From Detwar Kabir

JHENIDAH. Feb 4: It structural and administration policy are not changed, all the 15 sugar mills of the country will not be able to become profitable institutions.

According to sources, in 1994-95 fiscal year a total of targeted 2 lakh 18 thousand 6 hundred 22 metric tons of sugar would be produced from 15 sugar mills of the country. The procurement of sugar was 8.60 per cent. Out of this 21 thousand 3 hundred 15 metric tons in North Bengal Sugar Mills, 20 thousand I hundred 60 metric tons in Rajshahi Sugar Mills, 11 thousand 1 hundred 40 metric tons in Natore Sugar Mills, 19 thousand 90 metric tons in Joypurhat Sugar Mills, 16 thousand 6 hundred 25 metric tons in Mobarakgani Sugar Mills, 15 thousand 4 hundred metric tons in Darshana Sugar Mills. 15 thousand 2 metric tons in Kushtia Sugar Mills, 14 thousand I hundred 96 metric tons in Modhukhali Sugar Mills. 13 thousand 4 hundred 40 metric tons in Rangpur Sugar Mills, 13 thousand 50 metric tons in Setabgani Sugar Mills, 12 thousand 7 hundred 50 metric tons in Jillbangia Sugar Mills, 11 thousand 6 hundred 58 metric tons in

Shyampur Sugar Mills, 10

thousand 9 hundred 62 metric

tons in Panchagarh Sugar Mills

tons in Beshleandhu Sugar Mills will be produced. To procure this quantity of sugar, atleast 25 lakh 55 thousand 5 hundred metric tons of sugar cane would be crushed, a source said

The source also said that two lakh 21 thousand 5 hundred metric tons of sugar was produced crushing 27 lakh metric tons of sugarcane in all 15 sugar mills last year Though more than the tar geted sugar was produced, the procuring rate was 8.21 per cent instead of 8.60 per cent As a result, the mills authorities were compelled to crush maximum sugarcane.

Last year, the mills authorities sold two lakh 17 thousand 4 hundred 71 metric tons of local sugar for Taká 562 crore 25 lakh 52 thousand. In addi tion, the government imported 51 thousand 7 hundred 8 metric tons of sugar from abroad at a cost of Taka 138 erore 44 lakh 8 thousand, the source added.

Bangladesh Sugar and Food Industries Corporation (BSFIC) authorities deposited one hundred 12 crore Taka as Value Added Tax (VAT) and other revenues in same year. It was 26 crore 54 lakh 89 thousand more than the year 1992-93. In the year 98-94, two lakh

27 thousand acres of land was

brought under sugarcane culti-

vation in all 15 sugar mills

command areas. To make the mills production profitable, authorities distributed including cash Taka 24 crore 25 lakh 26 thousand among the farmers for purchasing fertilizers, seeds, pesticides and other equipment. Of this, 89 per cent was recoverable.

Atleast three lakh metric tons of sugar and six lakh metric tons of molasses (gur) is required for the people of our country, the source said. According to a statistics of Food and Agricultural Organisation (FAO) however, atleast seven lakh metric tons of sugar and 10 lakh metric tons of "gur" is required to meet country's demand. Though 15 sugar mills of the country produce more than two lakh metric tons which can not meet the requirements. As a result, atleast I lakh metric tons of sugar is imported from foreign countries spending a good amount of foreign ourrencies. It may be noted here that most of the village people do not care about their health.

If we want to meet our national demand of sugar atleast nine lakh acres of land would have to be brought under sugarcane cultivation. But it is cultivated on only 4 lakh 50 thousand acres per year. As a result, the sugar mills are not in a position to meet the necessity and losing years together. The statistics say decrease of sugar output rate from the sugarcane, overtime, bonus, incentives and other benefits to the employees and failure of administration are mainly responsible for the losses though sugar industry in almost a profitable institutions in the country.

To make the industry prof-

itable some change are reguired. Bonus, unnecessary overtime, some undue activities of sramik unions, interference of labourer leaders would be prohibited. Further, strict administration would be needed to guide the factories. Head office would not fix abnormal target of production on sugar mills, amount of sold sugar, molassess or other goods would be deposited in the accounts of concerned mills instead of head office. Import tax on sugar would be decreased and the rate of sugar would also be reduced. The farmers would be paid their bills on time to avoid harassment. The employees would not fraud or blackmail either the farmer or, the mills

authorities. It was also stated that almost all the sugar mills have 30 per cent excessive employees or officials which may run additional sugar mills. Further quality sugar would

be produced from these sugar

mills which may fulfil our na-

tional demand.

received Taka 1200, each student of classes IX to X received Taka 1500, each student of classes XI and XII received Taka 1800 and each student of Degree classes received Taka 2400 as stipend from the fund. The TLWF has been distribut ing stipend of this kind yearly since 1987.

580 students receive Tk 783,900 as stipend from

TLWF

From Our Correspondent MOULVIBAZAR, Feb 4: The

Tea Labourer Welfare Fund (TLWF) has distributed 'stipend' of Taka seven lakh 88 thousand 9 hundred among 580 students who are the children of tea labourers working in different tea gardens of the country.

A stipend giving ceremony was held recently at BTRI high school auditorium in Srimongal. AFM Badrul Alam, the Acting Director of the Bangladesh Tea Board (BTB) was in the chair, while Musibuddin Chowdhury, Acting Chairman of the BTB attended the function as chief guest. The function was addressed among others by M Ali Ahmed, Secretary of BTB, SA Hasib, Director of Project Development Unit of BTB and Rajendra Prashad Banargee, Executive President of the Bangladesh Tea Labour Union.

The TLWF source said that, each student of class VI to VIII In Jhenidah

Only 6 pc people use sanitary latrines

From Our Correspondent

JHENIDAH, Feb 4: Only six per cent people has been brought under sanitary use of latrines in last 5 years in Jhenidah district. The rest 94 per cent people use unhygienic way to defecate like in bushes ditches and bamboo made kancha latrines.

According to various survey reports and statistics, most of these people used unhygienic latrines in rural areas five years ago. They were not very conscious about use of hygienic latrines. Only a few families in urban area and rich people of rural area used pucca latrine. Though a good number of people using sanitary latrines, is not satisfactory. Most of these low priced sanitary latrines have no sufficient safety tanks and buckets, the reports said.

The sources also said that in six thanas. Jhenidah sadar, Sailkupa, Harinakundu, Kaligani, Kotchandpur and Mohespur, almost all the people are not aware about use of sanitary latrines. Rather they are interested to defecate in bushes. jungles, ditches or similar other places. All these people do not use ash or soap after using latrine. Awareness about use of pure water is not clear to them. Talking to a Thana Health and Family Planning Administrator it was learnt that they are trying to motivate I the common people of rural

area about primary health care including use of sanitary latrines. He said that might be able to make "Health for all by the year 2000" a success.

Radio, Television, newspapers and other electronic media are playing vital roles to make the people aware.

1,782 people held on various charges in Jhenidah

JHENIDAH, Feb 4: Police arrested 1,782 people on various charges, recovered 26 firearms and 532 ammunition during the last year from the six than as of the district, reports UNB.

According to the Police Super office, of the total, 534 were arrested under regular cases. 210 under court register (CR) cases, 316 under general register (GR) cases, 711 under section 54 and 11 activists of outlawed Purba Bangla Communist Party.

The seized arms include 19 pipeguns, three guns, two revolvers, one pistol, one airgun, rifle bullets-78, gun bullets-26, self loading rifle bullets-380, sub machine gun bullets-28 and its magazine-2.

Mentionable that police arrested 1,884 people and recovered 77 lirearms during the year 1993.
