

Flate, there has been a growing concern among educationists that reading, an infrastructure of education has severely been affected due to an onslaught of cable TV, video and even computers, a trend that has been noticeable particularly among the youngsters.

Such a concern has assumed all the more significance by its finding that gradual decline in interest in reading among voungsters has been brought about jointly by school, home and the community. While one may or may not have that much immediate control over one's community, it is appalling that home and school that are supposed to promote, can have an adverse effect on learning behaviour of their youngsters.

Out of this felt need of restoring reading to its pivotal position, the year 1989 was declared as The Year of the Young Reader' in USA. In a developed and disciplined country like Singapore, community based clubs or centres are being set up for reading facilities of all and in particular for being used by the students to carry on with their school assignments in a quiet and uninterrupted environment: in India, fear has been manifested by the school teachers that "the book reading child is slowly becoming a rare sight": closing down the children's section at the British Council Library in Dhaka in the recent past is ominous enough that less and less youngsters are borrowing books for reading.

These examples are significant enough to establish almost empirically that an erosion of learning needs and their concomitant skills in the life of a youngster has already taken

In schools in the developed countries, it is relatively easier to find out reading age of a child by administering a standardized reading test and other tests of reading comprehension that supply an index as to his reading ability and reading deficiency; nevertheless, in our context, not-so-structured instruments are reliable enough to diagnose such cases showing gradual loss of interest in

reading among youngsters. Other researches abroad have revealed that it is not only in reading school text books but also literary materials and any other materials that we come across daily, a decline in reading "has been "rather pronounced. It can, therefore, be safely inferred that reading not only as a necessity but also as a

# Reading: Key for A Creative Mind

by Nazma Yeasmeen Haque

hobby has lost its glory that was there in the yesteryears. Gone are those days when reading was taken as only or prime source of entertainment. Youngsters of today by keeping

themselves occupied with too many distracting stimuli in their immediate environment tend to learn little of many things that do not often converge into systematic kind of knowledge with end result being acquisition of peripheral knowledge and minimum retention.

Bits of data including music emanating from cable TV alone fill in the brain of a youngster to a large extent clouding its consciousness for reading activity which not surprisingly may appear to them as counterculture for deriving pleasure.

As an intellectual exercise. reading has therefore been pushed to the back seat, a situation that has sadly enough been exacerbated by parental attitude and home environment.

Till his pre-adolescent period, a youngster in his family is primarily conditioned by the way his parents spend their leisure. and the extent to what reading occupies its position in his

home environment.

A home environment that is characterized by noise blaring from electronic media either for most of the time or at a certain time that ought to be reserved for studying by the school going children is undoubtedly the most unfavourable atmosphere to concentrate in an intellectual ac-

It is quite a common sight nowadays to find children doing their school work sitting in front of the TV. Interference of such temptations can have a far-reaching effect on the functioning of both normal and complex activities in a youngster's brain.

Not entering into a sterile debate between how much one should read for obtaining good

Gone are those days when reading was taken as only or prime source of entertainment. Youngsters of today by keeping themselves occupied with too many distracting stimuli in

their immediate environment tend to learn little of many things that do not often converge into systematic kind of knowledge with end result being acquisition of peripheral knowledge and minimum retention.

marks or grades and for acquir ing knowledge, one can safely state that the kind of teaching procedures we mostly adopt in our schools also tend to put an early limit to reading. Two things accrue from such a practice which often remain unnoticeable to the teachers, one. youngsters search for an easy way out by reading less and spending least time on it; the other, a habit of desultory reading is developed by attempting to cover up bits and pieces of knowledge that need to be learnt within a given time. Reading less and less generates a vicious circle; counter-balances other tools of learning such as understanding, inquisitiveness, writing and retention as far as school education vis-a vis general intellectual development of a learner is con-

The following measures may be suggested for schools to implement with a view to reinstate reading at the heart of learning:

(a) a kind of flexible timetable can be used at least up to the first five years of formal schooling whereby less compartmentalization of subject lessons will normally allow longer duration giving a leeway to put reading to more use in the classroom:

(b) a homework must not necessarily and mostly mean a written assignment that has all the possibilities of getting done assisted: whereas a reading assignment for homework followed by classwork will not only be learnt mostly independently but also vary the nature of the task making it vibrant for the youngster. When tested orally in the class prior to a written work, a child being able to participate successfully develops self-confidence that is psychologically fulfilling to him and helpful to others not so well-prepared;

(c) using silent reading in the class on a portion not yet taught with the purpose of exercising comprehension skill;

(d) subjects/lessons that lend to storytelling may be presented in such a way that when a heightened level of interest will be approaching, it can be suspended and pupils told to complete the sequence by reading it. Motivated by curiosity, they will naturally be led to do further reading:

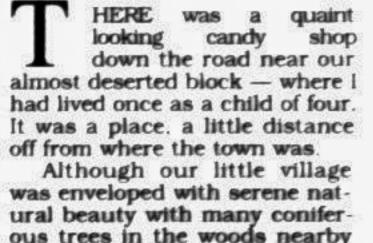

(e) class tests, examinations often must consist of improved type multiple-choice questions and short-answer descriptive questions that will call for extensive and thorough reading as their pre-requisites:

(f) open-book tests should be used consisting of a few questions for which the answers will be relatively longer. Such questions should be set in a notso familiar way entailing reading between the lines. Here the target will be to see how a youngster is being able to apply himself by exercising his thinking and reasoning ability.

The values of audio-visual media notwithstanding, it must be admitted that these have almost completed a full circle by outweighing reading in the life of a youngster. In order to set things straight, reading will need a major thrust both in inculcating and sustaining an interest among the youngsters. Reading habits once started early in life tend to persist more or less throughout one's life once nurtured with interest. A feeling of 'creative interaction' that is there in reading, therefore, needs to be aroused among the youngsters in order to curb influences that run counter to school learning.

ous trees in the woods nearby and a myriad of little animals. such as the squirrel; my four year old mind marveled only, at the existence of such a heaven as the candy shop, where my mother used to take me once a week to treat me on 'any one' of the sweets I desired. The difficult past was the

choosing! There were so many varieties and kinds, that my throat ached with regret if I had already chosen one type — "Perhaps I should have taken the gum drops instead of the liquorice stichs, or better still. the pink sugar - coated candy bars!" The storekeeper, Mr Green, was most understand able, for he would pause as if in gesture, of whether I had changed my mind in the last minute.

Then the moment of indescision would pass and the chosen sweet would be put in a brown paper bag and handed down to me from the counter. What caught my attention, though, at first was that my mother gave him something after which he handed me my candy. Later on. I developed the idea of trading one thing for another. That was when an idea struck my little mind with much force.

If persisted and so, one day. I drew up all my courage and ran all the way down as fast as my little round legs would carry me and ended up out-side my desti-

nation. One of my hands were He stared for just a second. clutching the prized and precious possession with which I was to trade for my candy. I went in and chose all the desired sweets; every two of each

kind! As I did so. Mr Green watched me with some surprise and then eyeing me suspiciously, asked whether I had enough money to pay for all the things I were buying! I answered innocently, "Oh, I have lots of them!" Then when he had packed and handed me my treasure. I held out my tiny hand. clutching fast, and opened it to reveal a dozen cherry seeds!

then sighed. I stared back, my eyes very wide - "Isn't it enough?" I asked. He sighed and said that it was a bit too much and that I had some change coming! Later on, when I grew up and

remembered. I realised how beautifully Mr Green had tackled the situation, how wonderfully he had preserved my innocence. I felt the true wisdom behind his actions, as I pictured the little boy holding on possessively to his prize and walking happily out of the candy shop and into the street - back home

## A Bond Between the Old and the Young

by ASM Nurunnabi

real-life story sometimes reads like a fairy Lale. My small grand-son finds great interest in a fairy tale which speaks of a giant who used to live in a palace alone. The palace had all the richness of comforts and conveniences. Within the palace compound, there was a big garden in which flowers of many varieties blossomed. The garden also attracted many kinds of birds, morning and evening. Their melliflous chirpings and the wealth of beautiful flowers in the garden filled the heart of the giant with

The giant used to pass his nights hunting for food. With the coming of dawn, he retired to his palace where he rested and slept. The giant was happy with his peaceful life. This was, however, rudely disturbed sometime later when some little children of the neighbourhood who never saw the real occupant of the palace, used to gather in the palace garden to engage in many kinds of games. While thus engaged in their games, the children lost count of time laughing and shouting. They had no idea that within the palace the giant was sleeping after his usual nocturnal expeditions. The unbounded merry-making of the playing children in the garden disturbed the sleep of the giant and he felt very annoyed.

One day, the giant could no longer bear the disturbance caused by the children. He came out of the palace in anger. Seeing the angry face of the giant. the children got frightened and fled instantly. Afterwards the children avoided the palace garden. Their games also

Days passed and the giant 77 had his peace. But nature had its ways of wrecking vengeance. When the children ceased playing in the giant's garden, no flowers blossomed and no birds sang in the garden. Soon the garden became a barren waste-

This terribly distressed the giant who came to feel that the playful children was a source of joy to him. He accordingly felt repentant. In this frame of mind, the giant one day found that a small child who had none to warn him of the giant, came into the garden by mistake. Instead of being angry, the giant felt extremely happy seeing the little child. He took him up in his arms and caressed

him tenderly. The other children of the locality watched the scene from outside the garden wall. They all came to realise that the angry mood of the giant had disappeared. Emboldened by the changed attitude of the giant. they came back into the garden and again began their daily routine of playing. The giant also felt happy.

With the change of heart in the giant, nature also seemed to change. Flowers again began to

blossom and the birds sang. The fairy tale just told seemed to have some relevance in the world of reality when applied in some particular incident in life. In the courtyard of an old neighbour, there was a Sheuli tree. During the flowering season, the tree presented

an enchanting look; all through the night, the Sheuli flowers, with their white petals and short orange-coloured stubs fell to the ground, making it look like white flakes of snow on a green carpet. The flowers that dropped from the tree were a source of great jubilation to the small boys and girls of the neighbourhood. They would assemble very early in the morning under the Sheuli tree and begin collection of the beautiful flowers.

In this work of collection. the old owner of the Sheuli tree enthusiastically co-operated. Being very old, it was not possible for him to climb the tree and give it a sharp shake-up so that flowers from the branches

could readily fall to the ground for collection by the children. But the old man was not to be daunted, he would go up on the low boundary wall adjacent to the Sheuli tree and give a hard push to the branches. The effort was enough to produce a bounty of flowers on the ground, much to the delight of the collecting children. Then followed the ritual of making small garlands of Sheuli flowers with cotton thread.

page of fiction. It had a real life import, much akin to the spirit of the fairy tale in which the giant representing the old man participated in the world of joy and merriment that the small children built up around them.

This story was not from a

1889 Paris World Exhibition for it was there that the French engineers Panhard and Levassor saw the Daimler Steel wheeler car powered by the Daimler vee-twin engine.

story of the motor car was the

It was in France, too, that Benz enjoyed his first limited success, for his Paris agent, Emile Roger, managed to sell one or two Benz cars in Paris (and, coincidentally, garaged his first Benz in Panhard and Levassor's workshop). But it was not until his first fourwheeler, the 1893 Victoria, that Benz began series production.

Peugeot were already established as motor manufacturers by that date, for in 1891 they had actually sold 5 cars, boosting production to a dizzy 29 the following year.

In America, the motor car was evolving along different lines from Europe and in January-February 1891, the New World's first petrol vehicle, a friction driven three wheeler built by John W Lambert of Ohio City, made its first tentative runs. In 1895, America's first motor manufacturing company was founded by the Duryea Brothers, Charles and Frank (whose prototype dated from 1893); the following year they exported a couple of vehicles to Britain. However, antimotoring prejudice in that country was running high, and there was little encouragement from motor vehicles, either home grown or imported (though the company promo-tions of the so-called 'father of the British motor industry', H J Lawson succeeded in parting a good many credulous investors

Demand for motor cars was growing steadily during the latter part of the 1890s, and by now the Benz had become the world's most popular car, with the 2000th production vehicle being delivered in 1899. Motoring was still the sport of a few rich eccentrics, however, and many people had never seen a It was to remedy this defect

A total of 65 cars. many English Daimler and MMC models built by Lawson's empire, set out from Hyde Park corner, London, in April, the major part of this entry finished the run without major mishap, proving that the motor car had at last become a reliable - or relatively so - touring vehicle after a century's gesta-

### The Call of Death

by Rubaiyat Khan

HE fingers lay trembling. Atop the wooden desk. A pair of eyes shifted nervously Towards the window.

He waited..... Suddenly a chilled gust of wind Burst forth. Pushing them back with evil force. And the dim burning candle-The only link to reality-

But now an unearthly light Filled all corners of the den. Blinding bright, but so cold! The smell of sulphur nauseating, Tearing at the very flesh Of the soul.

A thousand screams echoing, Pounding through the head, Till it became unbearable. Last wracking gasps were whispered...

Broke off...

The hour had come at last When body and soul Were to separate..... Then the pain and misery halted -Time frozen forever still. Then there was only peace and the stillness, of the dark.....
