Matia opens SAIC workshop Agri productivity main key to poverty alleviation

The Indo-Bangladesh water treaty is a milestone towards further development of cooperation and understanding for sharing common natural resources among the SAARC countries, said Agriculture and Food Minister Begum Matia Chowdhury, reports BSS.

"The augmentation of surface water resources is a vital necessity for survival of people of the region," she said inaugurating a regional workshop on "Agricultural Information Needs Mode Mechanism and Information Flow in SAARC Countries" in the city yesterday.

The Minister told the function that agricultural productivity is clearly the main key to poverty alleviation in the SAARC countries.

Matia said the utmost need for international, regional and bilateral cooperation on exchange of information and agreements for sharing common natural resources like water cannot be ignored.

SAARC Agricultural Information Centre (SAIC) organised the workshop at the BARC auditorium. Agriculture Secretary Dr AMM Shawkat Ali and SAIC Chairman Badri Prasad Bimoli also addressed the inaugural function with SAIC Director Dr M Zahangir Kabir in the chair.

"Utmost priority has been set for improvement of agriculture in the SAARC countries," she said emphasising a sound information infrastructure for agricultural research and development.

The minister described the agriculture as life blood of the

Mercury-containing cream can cause kidney disease

Mercury-containing cream or soap used by darkskinned women to lighten their skin colour can cause kidney disease, a recent research by experts said, reports BSS.

Even the herbal medication to lighten natural colour might cause the user diseases like hepatotoxicity, the research conducted by the international programmes on chemical safety of World Health Organisation said.

It said women are also generally much more exposed than men to indoor air pollution resulting from the burning coal and biomass fuel.

The research said not only may women be more exposed than men to certain chemicals but the effects of some chemicals are more marked for women than for men. There are anatomical, physiological and biochemical differences between women and men, such as body surface area water content, fat contents, enzymatic processes and protein binding. These lead to toxicokinetic and toxicodynamic differences between men, non-pregnant women and pregnant women.

Apart from the fact that certain chemicals may pose a greater risk to women than men, a woman may pass chemicals (or the effects of chemicals) to foetus via the placenta or to her baby via her milk. It pointed out that by-product from the manufacture of the pesticide lindane, seems to be universal environmental contaminant and has been found at high levels in breast milk.

SAARC and said the stimulating factor in economic growth remains in agricultural production.

Matia Chowdhury said agriculture was given priority by all of the SAARC members with the objective of sharing agricultural information for the advancement of agriculture and allied fields.
