### All Up to One Person

The just concluded Awami League council session will go down in history for having established two very important things - one, that Sheikh Hasina is at her strongest and two, that Awami League as a party having collective decision making system, is at its weakest. What we saw in the name of the council session was nothing more than paying tribute in the court of the mighty leader. What revealed Sheikh Hasina's complete control of the party is the fact that all decisions about its future leadership were taken NOT by the designated bodies meant for such decisions, but left to the sole discretion of the party chief. However flattering it may appear in terms of widespread confidence enjoyed by her, it is totally self defeating in terms of nurturing democratic norms within the party. Such practices kill initiatives and natural growth of leadership, and create the climate for sycophancy.

The party's present state of powerlessness was revealed by the fact that no councillor dared to criticize any aspect of the party or the government except to say that there was a growing distance between the workers and leaders - a normal complaint for all those who are left out of power. To the best of our knowledge there was no introspection that could have had some sobering effect on the party's activities, no self analysis that could have given birth to new initiatives and no stock taking of their performance that could have given an indication as to where the party is vis a vis public opinion at the moment.

There was never any question as to who would be the chief of Awami League. But there was widespread expectation about a change in the number two spot. In opting for status quo Sheikh Hasina has revealed that she is either not willing, or not confident about anybody in her party to fill that post. The decision not to change the second level leadership reveals an inner weakness of the party which should be addressed sooner rather than later. Sheikh Hasina has always been the supreme arbiter of her party. For the first time she also combines in her person the tremendous power of her elected post. Not risking a change even now has surprised most. Sheikh Hasina's opting for stability may have sown the seeds for sterility and stagnation of her party. It is hardly a recipe to lead a vibrant mass party to the 21st century.

### A Stitch in Time

The earthquake that shook all Bangladesh on Thursday could not be measured for its intensity and its epicentre also could not be located. Indian electronic media is reported to have quoted the intensity at 5.7 on the 10-point Richter Scale. The reason for our national failure on these counts are two - a. the only facility for taking the Richter Scale reading, located at the Ambagan Geophysical Observatory at Chittagong, is out of order for quite some time; b. locating the epicentre as also the direction of the tremor cannot be done by the only one observatory, the Ambagan one, and the required two others are still awaiting materialisation from the planning stage.

This exposes a dangerous gap in our preparedness to meet natural calamities. And this serious indifference on the part of the state and government in the matter of earthquakes gains manifold in national weakness when we see the way the media - both print and electronic - treated the tremor and more so by the very evident social response of couldn't-care-less. This is not going to help in a quake-prone area like Bangladesh. The social indifference is strange because many senior and perceptive citizens have said that this was the longest and severest quake of all they had experienced in their life. As there was no loss of life and as no significant damage to property was reported, the nation perhaps will continue in its indifference. But this will be both foolish and dangerous.

It is said that the two severest continental quakes occurring in human history had their epicentres quite close to Bangladesh - 300 km away for the worst and only 80 km for the one next. And even in recent times at least two quakes had their epicentres in a territory that is now Bangladesh. It is as such imperative that we cut down on our ignorance of and indifference to this phenomenon.

It must be borne in mind that the difference between a sweet escape and massive destruction is as sharp as a razor's edge. Seconds more and the quake could lay waste vast chunks of Dhaka and Chittagong consider a Kobe-like strike on Dhaka and Chittagong. Can we think of the consequences?

Please, prepare, we say. Why not have a full scale seismological institute and grow a goodly crop of seismologists? And take their advice to minimise the consequences of a severe earthquake?

### Deadly Rivers

Although test reports are still awaited for a definite attribution of cause behind this enormous damage to a shoal of fish at the river Shitalakkhya there seems little doubt in the word which has been out since the catastrophe: pollution of water due to dumping of the wastes from dye factories in the up-

stream of the river. Pollution of water due to dumping of industrial waste has come to enjoy the watchword of the envioronmentalists for quite some time. But not much has been witnessed by way of governmental initiative towards minimising the price man has to pay for his destiny of being hitched to the wagon of

We have already encountered the danger of arsenic pollution which is attributed to over use of ground water level and excessive use of chemical fertilizer. We are alarmed that apart from devastation to fish population, it can give rise to great number of cases regarding health complaints

among those consuming the diseased fishes. Even in these days of nostalgic reference to abundant supply of fishes in the yesteryears, fish remains an inseparable component of our diet and a wonderful source of protein. If we cannot stop our rivers from turning into deathbeds of fishes, very soon we will be facing major health hazards apart from being protein starved.

All these are signs of our long and dangerous ne-

glect of our environment.

We urge the government to take immediate measures to minimise the scope of pollution of river water through dumping of industrial wastes. And the measures have to be effective and viable and certainly not as unclear as the one recently taken regarding the relocation of leather industries.

### CHT Peace Talks

# A Peeping Rainbow

Could we not take a confederal approach to strike at the root of tribal problems? The days of rigid unitariness are gone, and we have but just one colourful ethnic diversity to cater to in an unbroken pattern of national homogeneity we are almost uniquely endowed with in a wide world of multi-ethnicity.

back, the occupiers from the plainland are being evicted with Tk 4,000 given to each family in rehabilitation money along with a promise made to them for their relocation in

but hardly shaking it in the

foundations made so much the

stronger by the largely success-

ful resumption of repatriation

of the tribal refugees from In-

dia. The repatriation has, on

the flipside, however, reopened

the wound historically fester-

ing around the land rights ques-

tion. In returning their plots of

lands to the refugees who are

OR the last two decades

trial pollution and lately by air

pollution has been going on un-

abated while very few either in

the administration or politics

have kept track of the toll it has

been exacting on the national

life. Concerned citizenry in the

country and the media have

from time to time raised alarm

but all these seem to have fallen

on deaf ears. The people, of

course, could see, smell feel and

sometimes choke on contami-

nated air and water; they could

see the grime accumulate on

their persons, home and hearth

and watch the vegetation die.

All around the country, among

the conscious section of the

population, there is seething

anger at the poisoning of water

and land. In recent times groups

of environmentalists in the

country raised public protests

and urged the government to en-

force laws to curb this soaring

levels of pollution. The De-

partment of Environment, it is

learnt through newspaper re-

ports, has directed the indus-

tries concerned to set up waste

treatment plants in their units

that are causing pollution to

environment, especially the

river water, by releasing

therein solid and chemical

waste. The future of the coun-

try's environment seems to be

clouded by some offending in-

dustries' reckless ways of dump-

ing industrial waste, organic

materials and discarded metals

that leach out of landfills into

ground water level, contami-

nating drinking water supply

and polluting human habitat

tive issue of amending the law government khas land. governing the three hill district It is complained by some parishads is bound to figure government sources that the against the backdrop of the per-BNP government in 1994 apsisting tribal demand for auplied a similar procedure when tonomy. This has been in the recovering lands for the reworks for some time with the turnees, but is now, with the PCJSS having already submit-Jamaat-e-Islami in tow, resistted their amendment proposals to the government and our law ing it by politically fomenting the tribal-settler differences. ministry duly communicating There had been a national

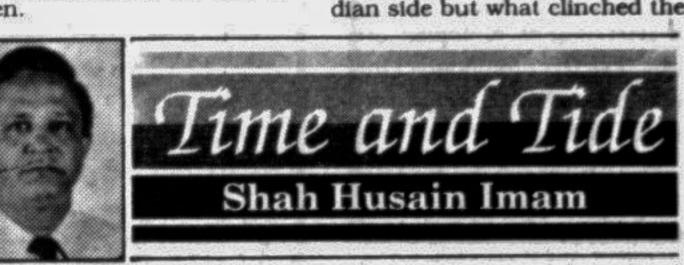

conference of basically nontribals held in the CHT on April 25 at the BNP's initiative which was attended by, among others, the Jamaat. A teasing invitation was extended to the ruling party. The left parties, though invited, just kept away.

The refugee repatriation has begun following a 20-point agreement signed between the PCJSS and the refugee leadership in India on the one side and the Bangladesh authorities on the other whose very first clause refers to the Constitution of Bangladesh and upholds the obligation to respect the rights of all citizens, tribals and nontribals alike.

Despite being a member of the national committee on CHT affair, the BNP kept itself out of all the meetings and negotiations held by the committee with the PCJSS, and the only normal option left to the party to dilate on the subject has been to unwind the mental coil inside the parliament. There is still an opportunity for this to

an international conference on ethnic rights held in Calcutta a few months ago. Tripura state government had also shown signs of fatigue with the refugee problem. And the news is Shantibahini operations have been terminated from across the border.

Manifestly, these are proofs of a change of heart on the Indian side but what clinched the

Looking at the shape of things. India does not seem blame-worthy anymore for providing sanctuary and arms to the Shantibahini now that the repatriation of our tribal refugees languishing in the Tripura camps has resumed in earnest. With the change of government in Bangladesh, the Indian central government went on record having refused permission to a prominent Chakma refugee leader to attend

issue is the new Bangladesh government's assurance to India that it would 'refrain' from providing any sanctuary to the insurgents from the north-eastern states of India.

A certain change in the geopolitical outlook of the region has also been noticeable following a perceptible degree of rapprochement taking place in the once adversarial Indo-China relationship. The US

network for watching China over India's north-eastern shoulder was moved to India's northwest during the 1962 Indo-China war. The Naga, Mizo and Tripura insurgencies are placed in an altered geopolitical context today compared with what used to be seen as having the makings of a flash-

point in the pre-detente period. After that bird's eye view from the sputnik, so to speak, we land on the unsettling episode of a bloody Thanchi encounter in Bandarban on May 4 which left a BDR Lance Naik dead. Two Shantibahini militants among a large number who raided the BDR camp were also killed.

By standing guard over acts of sabotage our security forces are certainly helping the peace process to move forward.

Agent provocateurs are at work with their usual stake in a status quo that gives them an opportunity to fish in troubled waters. Besides, those who are habituated in the possession and frequent use of fire arms hardly ever get over the heady feel of power they are intoxicated by, especially when it can be romanticised in association with the spirit of freedom and

neries in the Hazaribag area

has any effluent treatment

plant and that would only trig-

ger the menacing situation in

the days to come. Understand-

ably, sulphur dioxide (So<sub>2</sub>) ox-

ides of Nitrogen (Nox), Hydrogen

Sulphide (H2S) belched out

from the boilers of these tan-

neries have created a disastrous

situation causing illness of var-

ious types like asthma, lung in-

fection and heart diseases. Be-

sides the problems emanating

from the big ones, innumerable

small scale industries have

sprung up in densely populated

areas even like, Dhanmondi,

Uttara on one side and not to

speak of Islampur, Narinda and

Gandaria on the other without

the approval of DoE as a result

of weak industrial policy which

is at best confusing and rather

encourages pollution. While

notices have been served on

1176 big industrial units, the

the entrepreneurs of the indus-

trial units that there is money

in recovering waste, instead of

discarding it. Tax incentives

must be offered to firms that

manage to reuse their waste.

The environment protection

laws provide jail term of five

years in default fine of Taka

two lakh to the violators after

repeated warnings. Ruefully, no

one has yet been brought to

book. Industries contribute to

more than 60 per cent of the

poisons that pour into the coun-

try's water systems. Effluents

these industries were set up.

have increased levels of toxins

It must be brought home, to

smaller ones get off the hook.

self-determination. Sri Lanka is a glaring instance of the dichotomy between the almost universally felt need for peace and the difficulty in disarming the LTTE cadres. It is now for the PCJSS lead-

ers who represent the political clout of the Shantibahini to make sure that their influence extends effectively over the militant elements in their ranks. There can only be endless wrangling over their rights so long as they fail to set their house in order and adopt a unified stance on their demands. Speaking with one voice will be helpful.

The basic question in the CHT revolves around a colourful indigenous people's rights to their own culture and traditional way of life. These need to be safeguarded by political autonomy granted constitutionally to six hundred thousand of our compatriots on the hills.

Since a constitutional amendment providing for such a dispensation cannot be passed without a two-thirds majority in the parliament endorsing it, the issue does cut across the party-line, so that there is no escape from bipartisan understanding on this question, too.

Could we not take a confederal approach to strike at the root of tribal problems? The days of rigid unitariness are gone, and we have but just one colourful ethnic diversity to cater to in an unbroken pattern of national homogeneity we are almost uniquely endowed with in a wide world of multi-eth-

### INDUSTRIAL POLLUTION SCENARIO

# There Must be Agenda for Change

by Md Asadullah Khan

There must be some proper laws regulating the location of industries and deterrent punitive measures that would force the polluting units to compliance. The pollution control boards must be armed with power to control the location of industries and prescribe clean technologies and a time frame for their adoption.

plastic, factories, distilleries and sugar mills generating different types of solid, liquid and gaseous waste with varying pollution burden.

The river water adjacent to these industries are highly toxic containing high concentrations of suspended and dissolved solids with high biological oxygen demand (BOD) loadings of 2000-3000 mg per litre. The consequences of this alarming pollution menace is horrifying. The process to fishless lakes and streams, dying forests and barren crop-fields has started.

The country's pollution menace does more than degrade the quality of life; it dramatically cripples and shortens life of human beings. In recent times, community health physicians calculate that illnesses traceable to environmental pollution account for more than 30 per cent of the country's health budget. One out of 20 people in the country now dies of environmentally in-

duced causes officials estimate. The present government overwhelmed by political and economic disarray can scarcely think about the environmental nightmare it has inherited. It might take huge amount to the tune of millions of dollars to clean up the present magnitude of accumulation of industrial pollution. In the neighbouring India more than 10,000 industries nationwide were either shut down or asked to move out of cities mostly by the courts, whom citizens approached as a

last resort. Respiratory ailment, allergies, skin diseases, disease of the central nervous system and cancers have increased several times over the last few years in the cities where people live cheek by jowl in a scenario of grimy smoke-spewing industries. Sadly true, until this time when the alarm bell has been sounded all around, even the government's planners utterly ignored environmental concerns, so to say. People now realise that irrational industrial policies make a mockery of en-

vironmental requirements.

However, there are some

practical difficulties and constraints standing in the way. It has been learnt that most effluent treatment units can be installed within 5 to 15 per cent of the total cost in industries like paper; for manufacturers of consumer electronic goods and printed circuit board, the cost can be as high as 25 to 40 per cent of the total investment. Pollution control system in power stations can be as high as the investment and in a country chronically starved of power, the question of closing them down for non-compliance of pollution control norms is now beside the point.

The government policy of industrialisation vis-a-vis development of the country right from the Pakistani days is responsible for today's problem of chronic pollution. First of all, Tejgaon industrial area was created right in the heart of the city's residential areas. Even if it was there, connivance from the regulatory authorities did not stop the growth of industrial units in other densely populated residential areas. In consequence, we see growth of scores of plastic, polythene and small scale steel and chemical industries from Mirpur to Gandaria, in Hazaribag, Rayerbazar, Mohammadpur, Narinda, Jatrabari, Sayedabad, Zurain, Farashganj, Islampur, Nakhalpara and even posh areas like Uttara and Dhanmondi. In some of these densely populated areas, excessive use of varnish, dye, coal tar, DDT, acids, phenyl, carbide, sulphur, gunpowder and chlorine has created a hazardous situation; noxious fumes and effluents from these industries have added to the toll of human life

quite stealthily. The setting up of chlorine based industries like paper, slipper pesticide in the residential areas trigger alarming consequences. So says a chemist, "God created 91 elements, man a little more than a dozen, and the devil, one-chlorine". Speaking about chlorine alone, it is a greenish yellow poison gas that rarely exists in nature. It is produced by man and reacts with carbon to create a new

range of stable and highly toxic compounds, called organochlorines. Ominously, industries using chlorine are spreading fast in the country. Among them: chlorine used to bleach wood pulp to make paper and viscose rayon; and chlorine as the main ingredient of the plastic and PVC used to make every kind of petrochemicals to pipes to slippers.

Organochlorines are particularly damaging because they travel through food chain and affect the liver and kidney, may cause cancer and interfere with processes like brain chemistry, spleen and bone structure and also to the extent of causing hormonal diseases. The indiscriminate use of chlorine in the industries could possibly account for the increasing number of hepatitis cases in the country. The outlook is ominous. Treated effluent water containing organochlorines is widely used to irrigate crop fields. The pulp and paper industry has failed to invest in chlorine-reducing technologies The PVC industry plans to deal with the crisis primarily by promoting recycling. But that only converts plastics into other plastics, ending in the ubiquitous multicoloured polythene bags.

The greatest environment hazard perhaps has come from the 300 tanneries located in the Hazaribag area of the metropolis. Untreated effluent and waste to the extent of 16,000 cubic metre per day are blatantly dumped into the adjacent (residential) area with no regard to health of the people residing there. Wastes from poisonous gas to toxic sludge dumped this way on land for years in absence of any sewage system are leaching into the water we drink, mingling with air we breathe. Some years back these effluents were poured into drains that would have carried them to the Buriganga. But after the construction of Dhaka Flood Protection Dam, these effluents are poisoning the water and land in the vast area covering Rayerbazar, Mohammadpur and Shyamoli. None of the tan-

spite public outcry about the harmful effects of setting up industries in the residential areas, administration has hardly been able to keep these off the city limits. There must be some agenda for change: proper laws regulat-

ing the location of industries and deterrent punitive measures that would force the polluting units to compliance. The pollution control boards must be armed with power to control the location of industries and prescribe clean technologies and a time frame for their adoption. Understandably, the department concerned till now, is woeful ill-equipped to fight pollution. It is not involved in the making of industrial policy, and as much as it is known, is both numerically (personnel) and technically unable to enforce the laws against pollution. In the backdrop of all these distressing signals, the decision taken at the meeting of the National Environment Committee held on May at the Prime Minister's office with Prime Minister Sheikh Hasina in the chair to set up "Environment Court" to control environment pollution and to intraduce l'environment laws along with the assurance of providing working capital for treatment of toxic effluents and sludge spewed by the industries is, however, a laudable step. This, among other measures recommended, speaks of the awareness of the present government about the gravity of the problem that threatens people's life. Now we have to wait and see till the implementation process is started. True, we must realise that all developments should be sustainable, meaning that it should use up resources no faster than they can be regenerated by nature. Government should also henceforth oblige local lending institutions, mainly banks, to review the environmental consequences of proposed loans.

### Poor medicare

Sir. Like a carrot tied up with a long bamboo and hung before an ass the former Ershad regime, BNP government and now the Awami League which came to power after 21 years have always been assuring us of health for all by the year 2000.

Years are passing by one after another but there is no sign of any improvement of medicare in the country. On the contrary, medical services in the government hospitals and health complexes are deteriorating, cost of medicine is rising higher and higher, doctor's consultation fee is increasing and the sufferings of the people know no bounds. We hear promises about

'health for all by the year 2000' but we wonder what will be its ultimate outcome? Of course, a handful of persons would be going to Singapore, India, Europe and America as usual for treatment and they might take a few days rest in our government hospital's cabins or costly clinics, but the common people would continue to be deprived of even the basic and minimum medical services in the country due to poverty and financial crisis, large-scale corruption and irregularities in our healthcare services both in the public and private sectors.

Do we have a national health policy in the country? Whether the reply is 'yes' or 'no'

the people are not aware of it. But it is an open secret that doctors, consultants and specialists who realise exorbitant fees from the patients and earn lakhs of Taka every month always evade payment of income tax to the government — neither the medical and drug stores display any price list nor they provide any cash-memo to the pa-

Who cares and realises the problems, difficulties, humiliation and grievances of a poor patient requiring medicare and recovery from illness. Would our Ministry of Health kindly look into the relevant matters and help provide medicare before the patient dies?

O H Kabir 6, Hare Street Wari, Dhaka-1203

VI Lenin Sir, Lenin's birthday passed without notice. V I Lenin is now in oblivion. But during the '60s, we directly or indirectly felt his presence in our minds. He was present in social science, politics, literature and where not. Lenin then inspired us to fight against all misdeeds in society. His banned book lured us to collect it and read his writings. He masterminded to successfully launch movement to oust the Tsar of Russia and tested his

doctrine to rid shackles of slavery of exploited people.

We cannot ignore his existence in achieving today's egalitarian society. Exploitation was rampant and the world thought again to take preventive measure. Labour law has been changed to cope with human rights. Here, too, V I Lenin is still alive. We have witnessed reign of both capitalism and communism. Fall of communism was inevitable for its inherent authoritarian view.

We still feel his presence.

Bose Asoke Kumar House #413, Road #10 Block-B, Chandgaon R/A Chittagong-4212

### Thanks to BNP

Sir, BNP, the main opposition party of our Parliament. arranged a grand reception for to the victorious Bangladesh cricket team at the official residence of the Opposition Leader Begum Khaleda Zia at Minto Road on 27th April. It has been a praiseworthy act on the part of BNP. At least, this time, when everybody expected prudence and magnanimity from them, BNP leaders did not show

any follies. Hence I thank Begum Khaleda Zia for expressing her consensus of behalf of her party regarding development of games and sports. I think, seeing that even political parties have crumbled their tradition of being strictly opponent to the counterpart in any national issues, our players must be inspired by this.

In fact, it is a must for the political parties to be united when it is necessary for the well-being of the country and the countrymen. So, thanks a lot again to Begum Zia simultaneously her party for their prudent act of giving a splendid reception to our tigers.

Md Moshiur Rahman MV Hall-118, JU

### Weekly holiday

Sir. An esteemed advocate tried his art to maintain Friday as the weekend holiday. He appears to have missed the main point, which is economic.

If our standard of living were such that we would control the world economically, then the "West-Christians" would gladly follow Friday as a holiday. rather than Sunday.

The time may be coming soon, according to data on the rise and fall of civilisations.

## Living with Sleaze

HE political fund raising scandals are starting to be felt around the country. All you have to do is say that you live in Washington, and you are suspect

I realised this recently when I was in Orange Country, California, and complete strangers stated calling me "sleaze ball." I was shocked and denied that I knew anything about anything when it came to political financing. One person wouldn't buy it and persisted, "What did you know and when did you know it?" I replied, "I knew something was up when the Democratic

National Committee started to refund all the money they had raised. No party does that unless something is rotten in Indone-

"You live in Washington. You know that every politician has his hand out. You can't plead ignorance."

"You might think that, but a lot of us walk around the city with our eyes closed. For example, we never see any lobbyists at night because they are always attending a fund-raising party. But there isn't that much to do in the nation's capital, so we never dreamed that they were attending parties to buy access to their politicians."

"Why didn't you know about the coffee parties at the White

"You can't see into the windows. I did notice Chinese people going in and out of the Main Gate, but I assumed that they were members of the Taiwan table tennis team." "Weren't you suspicious when you heard that the vice presi-

dent had made so many calls from the White House that he blew his cellular phone?" "No, I wasn't. I only began to wonder when he danced with a

hundred Buddhist monks at the Reflecting Pool on the Mall wearing a yellow robe."

"Even if you didn't suspect the Democrats, you must have thought that the Republican Party was up to no good." Well, I did hear that congressman Dan Burton, who heads up the committee to investigate the Democratic fund-raising, was reported to have threatened the US lobbyist of Pakistan. The

threat was that if the lobbyist didn't come across with a US\$ 5000 contribution, Pakistan would never eat lunch in the House dining room again."

I said, "Look, I know now, but I didn't know about all the sleaze until recently."

"What would you had done if you had known before?" "I'd have written my congressman."

(By arrangement with Los Angeles Times Syndicate and
