Jute cultivation target won't be achieved in 7 dists

By Staff Correspondent

Jute cultivation target will not be achieved in 7 southwestern districts of Magura, Jessore, Jhenidah, Narail, Khulna, Bagerhat, Satkhira.

Our Magura Correspondent says: Agriculture Extension Department (AED), had taken up a target for cultivating jute on about one lakh 13 thousand seven hundred 18 hectares of land in 10 districts. But about 91,102 hectares of land were brought under jute cultivation. About 80 per cent target of jute cultivation was achieved in above mentioned 10 districts.

A total of 16,295 hectares of land were earmarked for jute farming in Magura district. But 13,755 hectares of land were cultivated. In Jhenidah district the target of jute cultivation was 15,320 hectares of land, but 10,129 hectares of land were cultivated. Thirteen thousand three hundred twenty-five hectares of land were brought under jute cultivation in Narail district. But 5753 hectares of land were cultivated.

In Jessore district the target of jute cultivation was 24,024 hectares of land but 17,327 hectares of land had been cultivated. A total of 14,242 hectares of land were targeted for jute cultivation in Khulna district but 510 hectares of land were cultivated. In Bagerhat district 1,194 hectares of land were targeted for jute cultivation but ac-

tually 282 hectares of land were brought under jute cultivation. Nine thousand six hundred forty-four hectares of land had been targeted for jute cultivation in Satkhira district but six thousand eight hundred six hectares of land were brought under jute cultivation. Three districts like Kushtia, Chuadanga and Meherpur were able to fulfil their target.

The target of jute cultivation in Kushtia, Chuadanga and Meherpur were 10,362, 11,465 and 10,661 hectares of land respectively. The target of jute cultivation in these three districts exceeded.

In Kushtia district, 11,582 hectares of land were brought under jute cultivation, 12,156 hectares of land were cultivated in Chuadanga district and 12,806 hectares of land in Meherpur district. While talking to some established jute growers in Magura district they said, they are not getting good production of jute due to manifold problems. They faced problems to collect High Yielding Variety (HYV) seeds during the period of sowing jute seeds. Because quality jute seeds were not available in the sale centres of BADC. As a result, most of jute growers had to depend on Indian low quality jute seeds. In many cases, dishonest seeds dealers sold low quality seeds pouring in Indian bags. They branded low quality seeds as Debdash, Mahamaya, Krishan, Krishayan.

When contacted, a group of jute cultivators in Sripur thana of Magura district hold this

correspondent that flowers bloomed in tender jute plants at premature stage during the current jute cultivation season. This happened due to low quality seeds. The jute growers also faced problems of decomposing jute due to water crisis. As a result, the production target of jute cultivation is unlikely to be achieved, they added.

It was also learnt from the farmers that they are not interested to cultivate jute as they do not get fair price of jute.

Our Jhenidah correspondent adds: For want of sufficient rainfall and apprehending lower price of jute the jute cultivators in four districts of greater Jessore district did not cultivate jute on their lands.

AED earmarked those lands for jute cultivation earlier.

While talking to a highly placed source of AED he said to this correspondent that sufficient rainfall was not available between March and May this year. Moreover the growers are generally deprived of fair price of jute.

The price of jute depends on the shipper and whole sale distributors of mills and private jute traders of Daulatpur market in Khulna district. They purchase jute from remote areas through their agents or pharia's on credit.

To avoid harassment by the agents, the jute growers lost interest to cultivate jute. Though jute was once the "golden fibre" of our country, the growers lost interest yet to cultivate jute. Now they prefer to cultivate vegetables and other crops.
