IBRD lowers interest rates

WASHINGTON, July 25: The International Bank for Reconstruction and Development (IBRD), a member of the World Bank group, today announced the latest interest rates for its currency pool loans and the interest spreads for its single currency loans, says Xinhua.

For loans made under, or converted to, the IBRD's current variable lending rate system. the rate is 6.54 per cent, down from 6.70 per cent, charged during the past six months.

For loans that have not been converted to the current system. the interest rate is also 6.54 per cent, down from 6.65 per cent of the previous period.

The above interest rates are to be charged for the six-month period that began July 1, 1997. Meanwhile, the rates for loan or loan portions converted to single currency pool (SCP) terms for interest periods beginning from July 1, 1997 to December 31, 1997 with the US dollar and the deutsche mark as the designated currencies will be the same as for the IBRD's current lending rate system -6.54 per cent.

100 associates of Sonargaon Hotel join 'Operation Oasis'

Over 100 management and associates of the Pan Pacific Sonargaon Hotel yesterday joined a beautification programme around the hotel as parts of its year-long programme, says UNB.

The programme, titled "Operation Oasis", in Dhaka includes painting road dividers, planting saplings and seasonal flowers and clean-up drive.

The year-long beautification programme, began on April 25 in observance of the silver jubilee celebration of Pan Pacific Hotels and Resorts, will continue till March 25, 1998 with the theme "A Greener Tomorrow Begins Today".

The day's programme of the silver jubilee celebration began with planting saplings, seasonal flowers, painting the grills of road dividers and SAARC Fountain on the westernaide of the hotel.

Some 110 management and associates, and long staying guests of the hotel, led by its General Manager Eldridge J Mac Ewan III, painted grills, road dividers and fountains and planted saplings and seasonal flowers for three hours

from 9 am. The general manager said the Sonargaon Hotel has an exciting plan for this year. "As a company we want to involve ourselves more in taking care of environment and preserving it

for the future generation." "Dhaka city is our business partner and we believe in giving back something to the city," he

Director Sales H Ishiyama said the Sonargaon Hotel is committed to do something for the country and its people. As parts of our commitment, the Hotel has brought three road dividing islands in front of the hotel and its surrounding areas under its beautification drive.

DSE, CSE experience bearish trend over the week

By Rafiq Hasan

Bearish trend persisted at both Dhaka and Chittagong stock exchanges last week amid some ups and downs in major market indicators.

The Dhaka Stock Exchange All Share Price Index fell by 41.28 points closing at 960.78 points from 1002.26 points at the beginning of the week.

The market capitalisation of the bourse lost Tk 346.99 crore declining to Tk 8035.57 crore on Thursday, the closing day of the week. The week had started with a market capitalisation of Tk 8382.56 crore.

Though the bourse witnessed upward trends for three days out of five trading sessions, the price index declined from previous week's closing position

Power transmission thru' JMB to save \$ 108m

Bid to eliminate settlement risks

20 global banks plan to

set up clearing house

Transmission of power from east to west through incorporation of facilities in the multimillion dollar Jamuna Multipurpose Bridge (JMB) will save Bangladesh 108 million US dollars, a World Bank's evaluation report said, reports BSS. It said the Power Develop-

ment Board (PDB) needs to construct a stand-alone power inter-connector in absence of JMB at the cost of 114 million US dollars during 1998-2000. But, the power transmission cost would be only six million US dollars after the construction of JMB.

The evaluation report said the PDB has indicated its preference to take gas across the river using the JMB for producing power at the western side (Sirajganj), since this will be a cheaper alternative than producing power in the west and transmitting it across the river. The government was now considering gas alternative as this would benefit in two ways

- first of all, the cost of constructing a stand-alone power inter-connector across Jamuna would be saved and secondly, the cost of power transmission lines on land and related installations would also be saved to the extent as it is cheaper than gas pipeline needed on both sides of the river, the evaluation report observed.

The World Bank's evaluation report said the distance of transmission lines from power plant in the east to the bridge and from the bridge to the Sirajganj power plant in the west was to be about 160 km, costing about 100 million US dollars as against gas pipeline distance of about 40 km and its cost would be about 20 million US dollars, giving a net saving of about 80 million US dollars.

This land transmission savings is additional to the savings in cross-river transmission which would help increase economic rate of return of JMB, the report added.

Asian stocks close mixed

HONG KONG, July 25: Asian stock markets ended the week generally mixed Friday, with share prices rising in Tokyo in reaction to an overnight record

rally on Wall Street, reports AP. Tokyo's 225-issue Nikkei Stock Average closed at 20,389.54 points, up 103.31 points, or 0.51 per cent. On Thursday, the index had closed up 155.72 points, or 0.77 per

The Tokyo Stock Price Index of all issues listed on the first . section was up 5.53 points, or 0.36 per cent, to 1,544.29. The TOPIX gained 9.13 points, or

0.60 per cent, the previous day. Despite some profit-taking. stock prices remained in positive territory throughout the day after the Dow Jones industrial average rose to its third straight record high, finishing

first above 8,100 on Thursday. Among Friday's gainers were some high technology issues and non-ferrous metals. Losers included real estate issues and some banking and brokerages.

TAIPEI: Share prices closed generally mixed, but the key index surged because of a rise in technology stocks. The market's Weighted Stock Price Index rose 176.49 points to 9.808.91.

MANILA: Share prices closed mixed as investors showed concerns over prevailing high local interest rates and the volatility on the Asian currency markets. The Philippine Stock Exchange Index of 30 selected issues slipped 0.11 point payment in or out for each to 2,572.69.

SEOUL: Share prices closed lower in moderate trading. The Korea Composite Index rose 5.40 points to 733.64.

closed mostly mixed. The benchmark ndex thipped 0.32 point to 1,980.96. KUALA LUMPUR: Malaysian share prices closed lower on profit-taking. The key

Composite Index fell 4.63 points to 1,041.26. BANGKOK: That share prices closed higher. The Stock Exchange of Thailand (SET) Index rose 12.58 points to 646.58

710.058. Dollar higher

in Tokyo TOKYO, July 25: The dollar was higher against the yen on Friday, reports AP.

In late afternoon, the dollar cost 116.26 ven. up 0.42 ven from late Thursday in Tokyo and above its late New York level of 116.05 yen overnight. It ranged between 115.95 ven and 116.65 yen in Friday's trading.

Traders said there was some dollar-buying by some US institutional investors in the morning, but dollar-selling interest from Japanese exporters at around 116.50 yen limited the currency's upside.

There was little fresh market-moving news ahead of the weekend. The yield on the benchmark

No. 182 10-year Japanese government bond fell to 2.175 per cent from 2.205 per cent Thursday, pushing its price up to 105.70 yen from 105.48 yen.

Equity financing in Bangladesh: Some policy issues—Part-II

Similar results can be obtained if the ratio of new equity to national savings is considered. It is about four percent. In general, then it may be concluded that the equity market has not been able to provide a strong alternative to the banking system and various government saving schemes for the mobilisation of funds in spite of adopting various policy measures and tax incentives favouring the development of equity

markets. The contribution of the market to financial development (as proxied by the ratio of new issues to gross investment) has not been significant. Speculative elements along with the investors' expectations bring fluctuations in the stock market. These contributed to a stock market 'boom' in 1987-88. The stock market started experiencing a sluggish and declining trend since the later part of 1988. The market experienced the worst price fluctuation during later part of 1996 and early 1997. These market swings took place ignoring all micro and macro economic fundamentals.

In these market swings the rapidly overpricing stocks later rapidly fell back to its rational level. It is needless to say that the rumours and helpless investors' psychology have been used by some vested quarters. However, it is noteworthy that new issues have been substantially oversubscribed since

It reflects the investors' interest in equity investment. Nevertheless, high level of oversubscription could be partly explained by the rate of capital gain due to rising trends in stock price and issue of stock at face value. Of course recently companies are issuing shares at a premium.

Much of the market constraint is associated with the overall development of the country and hence investment in equities is likely to continue to be some highly risky affairs for a great many potential investors with pronounced risk aversion attitudes.

The impressive volume of various government bonds and bank deposits were in sight while their respective yield was falling. In fact, the rate of interest of these secured investment had dropped significantly during the period from 1990 to 1995. It is likely that public enthusiasm for government securities and bank deposits would continue recording a significant volume, much to the cause attributable to the sense of security attached to them.

Certainly, the attitude behind such a situation can't be explained in terms of irrationality on the part of the saving public, but rather in terms of pronounced risk aver-

In the presence of forceful structural and other impediments, measures aiming at insue market are of questionable effectiveness, in view of the relative difficulties to institute and implement them.

cations. Policy implications

cient capital market. Efficient operation of the capital market is required to meet at least two basic requirements. It should support industrialisation through saving mobilisation, investment fund allocation and maturity transformation. Secondly, it must be safe and efficient in discharging the above

making maturity transforma-

Of course, these conditions differ widely from economy to economy. Thus, formulating a suitable financial policy and their execution in a particular country is predominantly significant in view of the prevailing situation and the underlying phenomena. In this regard opinions are largely united against government interference with the pattern of interest rates and allocation of investible funds.

Rather, these are to be determined by the free interplay of market forces. The package of policy prescriptions offered by World Bank, IMF and other veloping countries contains terest rates partly to tighten credit and partly to raise savings. This will make available more investable funds for economic development. However, the issue is ambiguous in terms of theory and empirical evidence. Strong support for 'free' interest rates (i.e., removal of any legal or oligopolistic ceilings upon interest rates in gen-

eral and interest rates on bank deposits in particular) has been shown by some scholars. Artificially cheap institu-

tional credit has the effect of distorting the allocation of resources between the modern and traditional sectors of the economy as well as inhibiting the integration of the informal and formal financial markets. 'Free' interest rates are argued not merely as the key to integration of different segments of the credit market but also as the centerpiece of a general economic liberalisation programme. This would reduce segmentation and shape an economy in line with develop-

High rates of interest for both lenders and borrowers induce dynamism that one wants in development, calling forth new net saving and diverting investment from inferior uses so as to encourage technical improvement. That implies promoting the integration of formal and informal financial markets, favouring enterprises and activities other than those that flourish under 'financial repression' and thereby changing the factor proportions in production.

Artificially low interest rates prevail currently in formal financial sectors of Bangladesh lie other less developed countries. By contrast, very high interest rates are charged in the informal financial sector reflecting the scarcity of capital. However, others have cast doubt on it. They argued that certainly, freedom in the capi-

mestic capital market. This scepticism is based upon the very uneven spread of information and understanding, even saying nothing of great differences in economic attitudes and abilities, that persists in developing countries. Real interest rates are not

good indicators of financial repression or distortion. The relationship between real interest rates and economic growth might resemble an inverted U curve. Very low (and negative) real interest rates tend to cause financial disintermediation and hence tend to reduce growth. On the other hand, very high real interest rates that do not reflect improved efficiency of investment, but rather a lack of credibility of economic policy or various forms of country risk, are likely to result in a lower level of investment as well as a concentration in excessively risky projects. That implies large negative or large positive real interest rates have the similar adverse impact.

The analysis of the success or otherwise of equity markets from a macro economic perspective is not necessarily a straightforward process. A variety of different indicators and variables for judging aggregate efficiency have been suggested by a number of authors. However, it appears that prerequisites of decisive importance may restrain the immediate growth of both demand for and supply of equities in Bangladesh. Indeed, in the framework of a less developed country dominated by agriculture like Bangladesh, it would be rather difficult to find an efficient equity market.

Development of confidence in financial instruments and the requisite change in institutions, their framework and at-

titude are basically a matter of time and not only of incentives. Efforts to accelerate the development of the equity markets shortly by some policy measures do not appear to be very promising in a developing market condition,

As expected, not very much can be done to influence the standing, profitability and dividend policy of a firm by legislative measures only. In spite of various legal measures and tax incentives the market is still very small and extremely volatile. The swings in the stock markets of Bangladesh in 1996 illustrate how much the extent of fluctuations in the market index can be for such a market.

Besides, inadequate disclosure system and legal framework, persistent political instability, lack of sufficient institutional structure, small number of large companies, narrow base of the market and low level of saving rates of 7.7 per cent in 1993-94 (low even South Asian standards) are some of the issues that are clear indication of market weakness. 'All these have substantial impact on the adequacy, efficiency and reliability of the market.

Conceivably favourable effects that legal and tax reform, such as exemption of dividend income from taxes up to certain limit, exemption of capital gain taxes, promotion of greater company disclosure, protection of minority, imposition of penalties for misdeeds of company executives etc., will likely to result in stimulating the demand for equities. But these may well be counterbalanced by the existence of various problems inherent in the developing markets.

Overall environment is very much a relevant factor to be considered while making an assessment about the operational efficiency of stock markets. In the industrialised countries investors will find a home that is well defined with a well structured legal system, a reasonably competitive situation, reasonable controls over prices and inputs to maintain them within tolerable limits, and relatively open access to the international economy. But the situation in the developing countries is not necessarily the same.

One must note here that public policies in developing economies need to help promote the necessary conditions for economic growth. The necessary elements here are savings and capital, educated people. entrepreneurs and organisations, technology and well functioning state. These are the issues which, by their nature, can't be achieved at a desirable level within a short time. In the absence of these determinant factors encouraged and promoted, accomplishment of any economic programme including capital market development is difficult to attain up to the expectation.

The slow evolution of the equity markets, however, should not hamper the industrial growth of the country. The development of the capital market and particularly that part of the equity segment, does not constitute a condition sine qua non for economic development. It is rather the outcome of the overall development process of the country and a feature of a more mature economy. In view of the situation pre-

vailing in a developing country like Bangladesh, the potentialities of the banking system deserve greater attention and the necessary steps should be taken to enable it to play a decisive role as an agent of development. Moreover, regardless of how efficiently organised an equity

market may be, it is difficult to ensure the flow of available savings toward the most desirable projects from the point of view of priorities for economic development. For, private profitability is not always a sound criterion for judging the desirability of an investment from

the social point of view. Public segments of the capital market can play an important role for the developing market. Public debt management could provide a suitable transformation mechanism whereby various debt instruments can satisfy various investors' tastes of ensuring safety, liquidity and yield, while the private entrepreneurs are permitted access to necessary funds which otherwise might not have been available for them.

Besides, with the passage of time there is reason to believe that institutional and individual investors will have better response to the issues of private firms since they have familiarity the dealings in securities.

Equities were traded in developed economies only after public confidence had been developed by prior experience with government securities. For developing an efficient stock market in Bangladesh, a viable secondary debt market needs to be promoted.

A vibrant secondary debt market (involving the debt instruments issued by the government, semi-government and corporate bodies) is an essential part of the programme to permit the conservative investors to enjoy the fruits of a fixed interest income stream as well as capital gains like the stock investors.
