

**In 1993 we changed the way Bangladesh communicates.  
We're about to do it again.**

## Introducing CDMA Wireless Mobile Network Technology

Pacific Bangladesh Telecom Limited created history in Bangladesh with the introduction of cellular technology in 1993. And today, with the introduction of CDMA wireless mobile network technology, once again we are going to change the way Bangladesh communicates.

Code Division Multiple Access (CDMA) is the latest telecommunication revolution taking the world by storm. The growing success of CDMA wireless mobile network technology can be attributed to the fact that age-old problems such as dropped calls

become virtually non-existent and cross-connections and blocked calls become a rarity. Furthermore CDMA wireless mobile network technology ensures superior voice quality and confidentiality of calls.

All of the above reasons and more have made sure that CDMA is the technology of the future.
