DHAKA, FRIDAY, OCTOBER 1.

BSMP exhibition on local software begins today

Bangladesh Software Mar-keting and Promotions (BSMP) is going to organise, an exhibi-tion exclusively dedicated to the locally developed software and multimedia applications and local IT training centres at DRIK Gallery in Dhanmandi from today.

The seven-day exhibition will start from 10.30 am and will continue till 8 pm, says a press release.

The exhibition is being organised to expand and create a market for local software and multimedia industries. The entire focus of the exhibition is in on the local IT products.

Fifteen reputed software and multimedia application devel-oping firms and IT training centers are participating at the exhibition with their locally developed products.

The chairman of BSCIC Khorshed Anser Khan will officially open the exhibition.

TechnoVista launches management solution

Local IT company Techno-Vista Limited yesterday laun-ched a management software of international standards for business firms of the country.

savs UNB. The enterprise resource planning (ERP) solution meets the needs of companies in apparel, footwear, textile, food beverage, automotive, electronics, pharmaceutical, processing

and office equipment. Titled JBA System 21, the software has been developed by UK-based company JBA International, one of world's six top ERP solution makers and number one for style and apparel

TechnoVista, a newly launched software company which is also the only authorised solution provider of IBM here. will be marketing the programme for the companies in Bangladesh

The software was launched at a function at Hotel Sonargaon, where the solution was presented on screen by the Sri Lankan experts of the JBA International, number two in Asia in terms of newly installed

customers. It was addressed by Foreign Investors Chamber of Commerce and Industry president A K M Shamsuddin, TechnoVista and Mohammadi Group chairman Anisul Haq, Nazirul Islam of IBM and MD of TechnoVista

TIM Nurul Kabir.
A separate briefing was also organised by the entrepreneurs in apparel sector where Bang-ladesh Garment Manufacturers and Exporters Association president Anisur Rahman Sinha

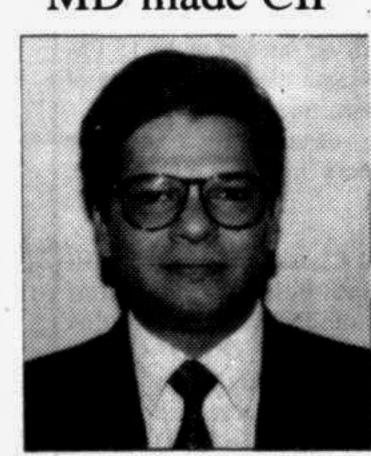

Appreciating the JBA package he said it is encouraging in one sense that foreign companies are coming here and on the other hand, such initiatives would foster local informationtechnology sector.

"After garment, IT could be the second success story," he said, adding that there are huge prospects in the inter-dependent sector, announced by the government as thrust one to take country's economy ahead.

Mentioning that information technology, specially In-ternet, really made the world a global village, the FICCI President said Bangladesh is still lagging far behind with only 93 days to enter the next millen-

He blamed bureaucracy as a major barrier to bolstering the IT sector in the country and urged the government to take the charge of satellite for highspeed data transmission at a reasonable rate.

Anowara Group MD made CIP

Md Mahbub Alam, Garments and Textiles Industrialist, has been selected as a CIP (commercial important person) by the government for 1999. says a press release.

He is the managing director of Anowara group of industries. The company is one of the pioneer 100 per cent export-oriented garment manufacturing industries with its modern knitting and finishing seven

units. The company has a great contribution and achievement in the field of industrial development especially in garments

Alam is associated with various professional, educational, social and religious welfare or-

ganisation.

Situation turns tense as management-Council fued mounts

DSE clearing house stops work for half an hour

By M Shamsur Rahman

A tense situation is prevailing at the Dhaka Stock Exchange (DSE) resulting in a half - hour work stoppage by the clearing house officials.

The DSE clearing house yesterday stopped functioning for at least half-an-hour as the officials refused to work following press reports that the Council was trying to discredit the management by blaming that a section of clearing house officials were involved in dealing with forged scrips.

The officials finally started their works after the management intervened

A division between the management and the Council surfaced over suspension of three brokerage houses. Later, the suspension was withdrawn from

NEW YORK, Sept 30: Foreign Minister Abdus Samad Azad

urged the world community to

undertake special measures to

accord duty-free access for the

economies of LDCs much more

than any other initiatives being

tor of LDCs while making open-

ing remarks at the ninth an-

nual ministerial meeting of the

LDCs at the United Nations

General Assembly (UNGA) in

Bangladesh foreign minister

recalled that duty-free access to

the LDC products was agreed on

autonomous basis at the Singa-

pore ministerial meeting of the WTO.

He cautioned that elimina-

tion of trade barriers alone

would not be sufficient unless

the supply-side constraints in

flow of private capital to the

drastically change the world

economic scenario and the use

of IT and nanotechnology will

generate huge growth, said Dr Jacques Attali, a leading Euro-

tion will threaten the world with

concentration of power and

wealth in the hands of the pow-

erful nations. To face this chal-

lenge, greater regional integra-

tion of countries like

Bangladesh, India, Pakistan

and Nepal is a must, said Dr

Attali, who is also the founder

President of The European

Bank and the Chairman of the

recently-launched global Inter-

net micro-credit institution,

He was talking to The Daily Star recently on a wide-ranging

issues beginning from the new

micro-credit endeavour to the

Daily Star (DS): Would you

Attali (A): It's not a plan,

like to tell us a bit about your

plan to introduce micro-credit

but a reality. We are using the Internet technology to foster the

growth of micro finance and

fight poverty. Micro finance is

now isolated from the world

market. The use of Internet will

help to remove that isolation. It

will speed up the growth of mi-

cro-credit by integrating micro finance with the global financial

market. For this, we have cre-

ated an international institution

called PlaNet Finance, which will

go into full operation by next spring. We will establish micro

finance web sites of 7,000 mi-

cro-finance institutions (MFIs)

worldwide. There will also be In-

ternet library and virtual uni-

versity for MFIs, donors, deci-

sion makers and individual

users. These will link us with

the world market. We will also

provide credit ratings to the

MFIs. As you know, currently

the MFIs are not rated and the

market does not know them or

trust them. We will also provide

the MFIs with credit lines from

next spring with the support of

the World Bank, the European

Union and private sponsors in-

cluding private banks. Now, we

are receiving money from pri-

vate donors and international

institutions and even multina-

tional companies like Oracle

and Netscape. Presently, I am

the chairman of the board of

PlaNet Finance while Prof Mo-

hammad Yunus is a member of

it. We have a surveillance board

chaired by the president of

surveillance activities.

Following the suspension of the brokers, their were also allegations of intimidating the management by T Mashfu, a suspended broker. The DSE Chief Executive Officer GQ Chowdury had also filed a general diary with the police in this

regard. The SEC also suspended licenses of two brokers on charges of dealing in fake shares. It also formed a two-member committee to probe the alleged involvement of the brokers in

Meanwhile, the DSE Council is expected to hold a meeting Monday with the Securities and Exchange Commission (SEC) to discuss the fake share issue.

Sangu Gas ready for Year 2000

The integrated Year 2000 (Y2K) compliance test on the Sangu Gas facilities has been successfully performed.
The objective of this test was

to mitigate Y2K potential risk during the change of the Millennium.

It can be concluded from the results of the integrated test on safety and process that the Sangu Gas facilities are ready for the Millennium change,

says a press release. Shell Bangladesh Exploration and Development BV (SBED) and its partners Cairn Energy PLC and HBR Energy Inc decided to have an integrated 72 hours test which required a complete shutdown of the offshore platform and onshore processing facility from 24 to 27 September. All the testing activities on Sangu were completed ahead of schedule and deliveries of gas were resumed on the 26th of September.

The joint venture partners have a Y2K programme for the Sangu Gas facilities in place since May 1999.

SBED is confident that it has taken all possible steps within its control to ensure availability of gas of the Sangu offshore facilities, however the overall system reliability is dependent on a range of third parties.

Sajeda for cleaner industrial technology

FICCI seeks end to prior DOE permission to set up plants

As investors sought abolition of environmental permits for new enterprises, Environment and Forest Minister Syeda Sajeda Chowdhury said foreign investment should take place in the country ensuring environment protection, reports UNB.

"The government has given the highest priority to foreign direct investment as a prime instrument of capital inflow to the country," she told a meeting of foreign investors in the city vesterday.

Foreign Investors' Chamber of Commerce and Industry (FICCI) organised its monthly luncheon meeting at Sheraton

The Minister said foreign investment would not only pave way for the country's economic growth and enhance quality of life of the people, but also protect the environment through application of CDM (Clean Development Mechanism) technologies.

In his address of welcome. FICCI president A K M Shamsuddin said the existing system of obtaining prior permission from the Department of Environment (DOE) before setting up an industry should be done away with to encourage invest-

"Instead, DOE should be entrusted with the job of proper monitoring of the set rules. guidelines etc. related to environmental policy of the gov-

compliance thereof."

Referring to environmental pollution situation prevailing in the country, he said pollution of atmosphere due to smoke emission from automobiles is experienced as a longstanding problem throughout the world, particularly due to wide application and use of internal combustion fuel.

Exhaust gases from automobile engines contain unburnt fuel -- Hydro Carbon (HC). partly burnt fuel - carbon monoxide (CO), nitrogen oxide (NO), sulphur dioxide and lead.

These compounds pollute and vitiate the air which have certain, negative impact on human bodies and the surrounding environment," he said, adding that 60 per cent of air pollution in the cities is caused by emissions from automobiles.

Referring to recent surveys conducted in the cities, he said the presence of lead in the bodies of children is eight times higher than the level recommended by the World Health Organisation (WHO).

"Every year. nearly 15,000 deaths occur because of disease related with air pollution."

Likewise, presence of carbon monoxide, sulphur dioxide, nitrogen oxide and chloro fluoro carbon (CFC) spewed by refrigerants and various sprays in the atmosphere cause serious health hazards to the populace.

The FICCI president also pointed out that discharge of toxic industrial wastes in the waterbodies also caused serious environmental hazards. Hy draulic horns are not supposed to be used, but they continue to be used everywhere.

In case of fire, he said. We know the phone numbers of the fire department to call for help But in case of an oil tanker accident in the Bay of Bengal or in case of a gas-well fire like Magurchhara, do we know whom to call? Which agency is responsible for this? Do our existing laws cover these areas of disaster?"

As such, the foreign chamber chief proposed a set of recommendations to the government for ensuring a clean and pollution-free environment, which is a sine qua non for attracting more foreign direct investment

He said adoption of catalytic converters in all automobiles irrespective of whether or not leaded or unleaded fuels are used and pursuing strict national emission standards are a

Bangladesh should have appropriate standards for safeguards against environment pollution for vehicles manufactured abroad and exported to Bangladesh.

He also suggested phasing out leaded fuel from the market and the two-stroke engines.

Minister of Environment and Forests Syeda Sajeda Chowdhury speaks at the Monthly Luncheon Meeting of the Foreign Investors' Chamber of Commerce and Industry at a city hotel yesterday. Also seen in the picture are: President of the Chamber AKM Shamsuddin, FICCI Vice President Chan Kun Han, FICCI Secretary Jahangir Bin Alam and the Secretary of the Ministry of Environment and Forest Syed Marghub Morshed.

Dr Jacques Attali talks to The Baily Star

Regional integration a must to curb wealth concentration in rich states

Star Report

it alone will not be enough. You

know the proverb that it's not

enough to give money to buy

fish, but it's better to teach

someone how to fish. So, micro-

finance gives the money to buy

the net for catching fish. But

the issue of giving money to buy the net is not all. There are at

least four pillars for poverty

eradication. One of them is

democracy. No development will

take place without democracy -

without freedom of knowledge.

information, freedom to criticise

and change government. The

second pillar is social services,

while the third is education and

the fourth is micro finance. So,

micro finance is just one of

Dr. Jacques Attali

some banks are taking up the idea. In Bolivia and Kenya, banks are interested in microfinance because MFIs are profitable and a lot of money is available for micro finance. The PlaNet University. library and MFIs ratings would create an environment where the markets and the bankers would consider micro-finance in their plans. But, MFIs should not become collection banks. These are banks with special purposes and ethics and deals with the trust of the people without asking for guarantees. This is something which the normal bankers wouldn't do. It needs a delicate balance between professionalism and trust. I do be-

lieve that in the next 10 years, we will have a network of 10,000 MFIs with the help of

credit is a human right? A: Yes, he is correct. But I

would rephrase it to say that trust is a human right. Of course, credit is a consequence of trust. DS: Do you think that micro-

A: We should not overesti-

mate micro-credit. It is a major

way of overcoming poverty, but

tacking poverty?

Planet Finance serving 50 to 100 million families, which is the official target by the UN to reduce poverty. DS: Do you believe in Prof Yunus' view that 'access to

credit is a major mode of at-

DS: How were you attracted to micro-finance? A: I had an exposure on Bangladesh ten years ago and came to learn about micro-finance. Then, as I launched the European Bank, I introduced a special credit programme for small enterprises. I was later asked to present a paper in December, 1997, on poverty and micro-finance by the World Bank. Eventually, I got interested in micro credit operations.

DS: Tell us about your experience in founding the European Bank and the whole process of the launching of European single currency. How does it benefit Europe and us? A: This is related to

Bangladesh in some sense, because soon after we launched the flood action plan in Bangladesh, the Berlin Wall collapsed. So, I had to move from Bangladesh to address the question of the eastern Europe. This new institution was created to hook eastern Europe to its western part. The historical experience tells us that it is important for you to have a common economic programme if you want to ensure real development and stability. After the first World War, we did not have a common programme with Germany. Following the collapse of the Berlin Wall, we felt that we should brush aside our flaws and include Russia in a common programme. Then we decided to create the European Bank to hook Russia to the west. We have the 15member European Union. Fiut

there are 15 more nations in eastern Europe who are out of the bloc. So, our agenda is to assemble the whole of Europe under one bloc. What is the consequence of EU? One effect is that you now have not only one superpower, but two. You will not be totally dependent on American decisions. Then, this will stabilise Russia and stop what Russia is doing on its southern borders. The third consequence is that the stabilisation of Europe is resulting in regional growth, which is the engine of world economy. This is also an example for others on how to stabilise their own environment. One day, you will realise that what was so hard between France and Germany, is not so hard between Bangladesh, India, Pakistan and Nepal. EU's success story will be an incentive for others to move ahead with regional integration. Our experience will be useful in such endeavours since we had to go through a lot of negotiations on customs union, other regulations, and the cen-

DS: What is your view about the southeast Asian economic collapse?

A: There are a lot of reasons. It was a terrible crisis and a lot of people lost their savings and jobs. But it is not the end. You should make a clear distinction between Japan and the rest of Asia. Japan is certainly in a very deep crisis because of its aging problem and its isolation from the rest of the world. It has no clear view of its future. But for Asia, it is also a useful crisis because people now realise that for real development you need democracy and you need to do away with corruption. So, it is a ma-

turity crisis as well. DS: Mahathir had said while there should be a total openness, there should also be some sort of regulation on short-term investment. What is your view about it?

A: Yes, this is one of the crisis-yielded lessons. It is absolutely silly to invite short-term capital. Even the most marketoriented economists now agree with that.

DS: So, what are the lessons for Bangladesh from the crisis?

A: The lessons are that it is important to have transparency, regulation on private banks, a clear knowledge of what is the amount of the inflow of capital and to have control of them. Korea, Thailand and Singapore are already back to new hopes. I think economic growth will return to the region. But political crises may be creating more trouble for some regions. There is a relationship between economic crisis and what happened in Indonesia today. The economic crisis was the triggering factor for fragmentation of the population. I don't think this crisis is going to have a longterm effect on the trend of economic growth in southeast Asia except Japan.

DS: How strongly you link democracy to growth? For example. South Korea and Taiwan are not good models for democracy and yet they have

good growth. A: Without human rights and transparency, poverty is increasing in the countries you mentioned. It is clear that the market is not interested in countries which do not have democracy in place. Investors are not putting their money where there is political uncer tainty. It is clear today that political uncertainty occurs in the absence of democracy. One of the vital elements of democracy is transparency, which also applies to economic transparency to know the social problems before they are too huge to overcome.

DS: You were the main person in generating French interest in the Flood Action Plan (FAP). So, tell us how do you access it?

A: I think it has been a clear demonstration that when there is a political will every impossibility becomes a possibility. All the powerful nations of the world committed to fund this project. We also had the London meeting in September, '89 to get the pipeline ready to start the project. But the problem was that there was no driving force to complete the task and there was no strong leadership to push such a huge project. There wasn't any institution in charge of it. But then, with the collapse of the Berlin wall the

attention of G-7 simply shifted away from FAP. It was impos-sible for G-7 to tackle two things at the same time - the FAP and the restructuring of east Ger-DS: Please share with us

you see the world economy in the coming years and how can Bangladesh benefit from it? A: Over the next decade,

there will be a huge growth because of IT and nanotechnology. But what will be the consequence of this huge growth? This is going to increase the GDF of the planet at the rate of something like 4 per cent a year. Now, the absence of a control mechanism at the world level is going to create a huge concentration of power and knowledge and wealth. This is not anything new. We have been seeing that this concentration process for the last 20 years. And the gap is growing between North America and the rest of the world. Of course, countries like Bangladesh are benefiting from global growth, but it is doing so at less than others. In 1965, the wealth of 10,000 richest people matched the wealth of China. Today, it takes the wealth of just 88 people to match that level. Only in health, the gap has been reduced to some extent, but everywhere else that gap is growing. So, the consequence of the global growth may be an awareness for the need of global institutions in the global village struc-

DS: What do you think about the impact on the environment? A: The impact will be evidenced on three areas -- energy waste, climate changes, air and water pollution. Now, the civil society has to enforce laws to stop climatic changes. I believe that people will realise the need for a global control on pollution.

DS: We are witnessing megamergers of companies. Doesn't it disempower countries like Bangladesh?

A: Of course. Not only Bangladesh, but many western countries, whose wealth is owned by someone else, are facing the same problem. US pension funds are now controlling the best companies. Because of anti-trust act, concentration of wealth has stopped in the US. But where is the global anti-trust law? Now, there will be a lot of regional integrations. Bangladesh, India and Pakistan present a huge middle class and an excellent human resource base. So, the future should be yours if you can integrate. Everyone is integrating so why not Asia? If I have to look at Bangladesh's future, my first question is where is the integration.

DS: Thank you very much for your time.

A: Thank you too.
