Estrada may testify at impeachment trial

MANILA, Nov 15: Philippine President Joseph Estrada may take the witness stand in his unprecedented impeachment trial next month when senators sitting as jurors will determine his fate on corruption charges, his spokesman said today, reports AFP.

The Senate is to convene as an impeachment tribunal in two weeks' time to pass judgement on charges of bribery, corruption, betrayal of public trust and culpable violation of the constitution lodged by the House of Representatives last Monday.

Estrada could not be compelled to testify without his consent, presidential spokesman Ricardo Puno said.

"But if he volunteers and he agrees and his lawyers feel that the rules at the hearing would be There were no other serious injuenough to guarantee his rights then the president may agree to

High blood pressure gene linked to obesity

WASHINGTON, Nov 15: A quirky gene variation that has been linked to high blood pressure has been shown to also predispose people to obesity, which could help researchers find new ways of treating both diseases, reports AFP.

The discovery of the variant GNB3 825T gene could pave the way for a new approach to the study of obesity and hypertension, according to the study's lead author, Achim Gutersohn of the University of Essen in Germany.

Those who inherit a copy of the gene from both parents are more likely to be obese, although a mere two hours of exercise a week appears to block the tendency, Gutersohn said.

"This underscores that obesity is not only a genetic disease, but that certain genes -- in connection with environmental or behavioural factors -- can increase the likelihood of obesity," Gutersohn concluded Monday at a meeting of the American Heart Association.

The researchers followed a group of 1,291 healthy white volunteers who carried the variant gene to document its effect on hypertension and obesity.

"One significant finding of our study is the strong effect of the gene in white individuals with a sedentary lifestyle," Gutersohn

They also examined the presence of the gene in non-white populations and observed that the gene was most common in black Africans and black Ameri-

First French genetic baby

PARIS, Nov 15: The first French baby selected genetically to be exempt from an incurable disease has been born at Clamart, a southern suburb of Paris, the daily Le Parisien reported today.

Monday's birth was the result of pre-implantatory diagnosis, or genetic analysis and selection of

embryos. This procedure, authorised in France for just over a year but already used in other countries. enables parents carrying the gene of a "particularly serious and incurable" genetic disease to try

for a baby that is free of the gene. In a first stage, doctors "create" embryos in vitro from eggs from the mother and sperm from the father. They then remove a cell from each embryo, when the embryos have reached the eightcell state, and submit them to a genetic test. Finally they implant those embryos without the dis-

ease-bearing gene in the mother's uterus. Le Parisien quoted its unnamed sources as saying the baby, whose sex was not given. was born prematurely and the doctors had decided to wait for a few days before deciding on the success of the operation.

Reinstate Mahendra: Fiji High Court

Govt rejects court ruling

SUVA, Nov 15: Fiji's High Court today ordered the pre-coup administration of Prime Minister Mahendra Chaudhry reinstated, but the military and its interim government promptly rejected the ruling, reports Reuters.

'The interim government will continue as the national government and legislative authority in Fiji," interim Prime Minister Laisenia Qarase said in a statement.

Both Garase and the military said they would appeal against the court decision.

Analysts said that without military backing the ruling was only a moral victory for Chaudhry, Fiji's first ethnic Indian leader who was toppled in a May coup and held hostage.

"In real political terms there is no evidence that the legal solution will matter very much," Suva-based University of South Pacific associate professor Scott MacWilliam said.

"Fiji now has a government that is dependent entirely on military support. It cannot rule in any other means.

High Court Judge Anthony Gates said in his ruling that the postcoup government was unlawful and unconstitutional and called on deposed President Sir Ratu Sir Kamisese Mara to recall parliament and reinstate Chaudhry.

Failed businessman George Speight and gunmen stormed Fiji's parliament in May and toppled the Chaudhry government in the name of indigenous rights. Chaudhry was released after 56 days and the military appointed an interim indigenous Fijian government.

Speight is in jail awaiting trial on treason charges. A failed military mutiny on November 2 by the special forces unit which backed Speight's coup left eight soldiers dead and 22 civilian

wounded and further rocked Fiji.

'The George Speight coup was unsuccessful in its attempt to overthrow the democratically elected government of Mahendra Chaudhry,' Gates said.

Chaudhry welcomed the ruling and urged post-coup authorities to recall parliament and return Fiji to democracy.

'The (Chaudhry government) coalition urges the authorities to abide by the high court ruling and to recall parliament so that Fiji is back to democratic rule," he said in a statement.

Qarase said he would continue to rule Fiji with the aim of securing the safety of citizens, rehabilitating the battered economy and working towards an eventual return to democracy. He said he drew authority from the military-backed President Ratu

Josefa Iloilo and Fiji's traditional power base, the Great Council of He said his government was committed to a new constitution to

"secure the future of indigenous Fijians" after the Great Council of Chiefs withdrew its endorsement of the 1997 multi-racial constitution. But Gates said the abrogation of the 1997 multi-racial constitution, which had enabled Chaudhry to become Fiji's first ethnic Indian prime minister, was wrong and that the make-up of Fiji's multi-racial pre-

coup parliament was still intact. The high court ruling stems from a case by an Indian-Fijian who was displaced by the coup and forced to live in a refugee camp. There are a series of individual cases pending which challenge Fiji's the post-coup

The Garase administration has said it plans to rule Fiji for the next 18 months after which it would hold fresh elections.

There's nothing to worry about US election: Clinton

BANDAR SERI REGAWAN, Nov 15: President Bill Clinton today assured the world it had "nothing to worry about" over the tangled US election because both his potential successors stood ready to lead the global economy,

reports AFP. With no end in sight to the legal wrangle over who won last week's election, Clinton used his final appearance at the Asia Pacific Economic Cooperation (APEC) summit in Brunei to play down the global ramifications of the saga.

Texas Governor George W. Bush and Vice President Al Gore both stood for strong US leadership on trade, Clinton told a forum of business leaders on the sidelines of the 21-nation sum-

His remarks appeared in part to be a bid to soothe financial markets spooked by the continuing uncertainty over who will lead the world's most powerful econ-

Bush agreed on in this election is that the United States should continue its strong leadership for a more integrated global economy and for expanded trade," he said.

"And as nearly as I could tell there is virtually no disagreement on that.

"On the question of leadership for trade, I think the world can rest easy because both our candidates made strong commitments

Gore and Bush's legal teams are currently locked in an intense legal battle over the length and scope of vote recounts in Florida, with the Texas Governor currently enjoying a razor thin lead in the state of only 300 votes. The saga appeared no closer to

resolution on Tuesday, as Gore's eampaign slammed a bid by Florida's Republican Secretary of State to cut off a manual vote count in some crucial counties.

Later, before meeting Russian President Vladimir Putin, Clinton told reporters the continuing

genetic ancestor of all men living today, and "Eve," the genetic ancestor of all living women, seem to have lived tens of thousands of years apart. How could this be?

Peter Underhill and colleagues at Stanford University in California

have an explanation. "They had different molecular clocks," Underhill said in a telephone interview. "Fewer men participated in reproduction than women did. His team, working with top geneticists across the United States, Europe, Israel and Africa, did a genetic analysis of DNA samples from the Y chromosomes of more than 1,000 men from 22 geographic areas

and determined that their most recent common ancestor was a man who lived in Africa around 59,000 years ago. Only men have Y chromosomes and researchers can look at gradual genetic mutations in them to "count" generations.

Other studies have used mitochondrial DNA, which women seem to women they conquered." Underhill said. pass down virtually unchanged from mother to daughter, to show that the genetic "Eve" lived 143,000 years ago. The latest study, published in the November issue of the journal Nature Genetics, reconciles the two findings, and in the process the

researchers came up with new tool for looking at how people are different from one another genetically They also added a great deal of detail to the family tree of all men Underhill said. living today, information that can be used by historians, anthropologists and other researchers. 'We can look at the tree and see, 'Oh, this

section of the tree is where Asians go. We can say, 'Oh, here is a Japanese Y chromosome and this is a Chinese Y chromosome," Underhill What the tree does not do, he stresses, is identify so-called races. spread across the world fairly quickly: perhaps 50,000 years ago to Geneticists have long agreed there is no genetic basis to race only to Europe and as long as 60,000 years ago to Australasia.

ethnic and geographic groups.

"People look at a very conspicuous trait like skin color and they say. But in the scientists' version, based on DNA analysis, "Adam," the said. "When you look at the level of the Y chromosome you find that, gee, there is very little difference between them. And skin color differences are strictly a consequence of climate.

But the differences, while tiny, are enough for experts such as Underhill's team to try to figure out how many generations you have to go back to find a single man who is related to all living people today. The history of our species is something on the order of 4,000 or 5,000 generations," Underhill said.

Women were good at passing on their genes, while some men were less lucky. Underhill's team found evidence bottlenecks that shortened the male genetic legacy.

What could explain them? Real-life scenarios from recorded history

Polygamy, a common practice, would also explain it. A few dominant

provide plenty of explanations. "One tribe conquers another tribe. The dominant tribe, the successful tribe, gets to mate with all the women its own women plus the

males get to marry and have children and the rest see their genes consigned to the rubbish heap of posterity Even nature itself can play a role. "I'm a man and if I get married and just by chance, a flip of the coin, I only have daughters, that is a random chance event. It has nothing to do with my being inferior or superior,

But such a man would not pass on his Y chromosome and so would

chalk up a big zero in the "Adam" and "Eve" genetic stakes although of course his other genes would live on. Fossil records suggest that Homo sapiens, or modern humans, first appeared in Africa about 150,000 years ago, then moved out and

Tracing our ancestors genetically can be almost as hard as using a piece of skull or a tooth to date a fossil, but Underhill and his team Well, this person's so different' ... but that's only skim deep," Underhill developed a new method of looking at chromosomes called denaturing high performance liquid chromatography. They can use it to compare the Y chromosome of one man to another, something that used to be

"By using this new method, we could do it far, far faster," Peter Oefner of Stanford, who also worked on the study, said in a telephone interview. 'When anatomically modern humans left Africa 45,000 to 60,000 years ago, they expanded rapidly across the world. The reason I can say this is because there is a nice relationship between (genetic) haplotype and geography.

couldn't migrate much. So they stayed local and accumulated all the Muslim militants ambushed their changes that allow us basically to trace them back." Oefner said. The same group reports in the latest issue of the journal Science that mir, reports AFP. they used their method to determine that 95 per cent of European men

descend from about 10 "Adams" who in turn can be traced back to three different waves of migration. The oldest male lineage they found dates back to the Old Stone Age or Itown, 30 kilometres north of the Paleolithic period 35,000 to 40,000 years ago. A second lineage dates to Kashmir summer capital about 22,000 years ago and is associated with the Gravettian culture.

more recent times, having come to Europe between 15,000 and 20,000 years ago. They were probably the first Neolithic farmers who migrated took place and ordered local from the Fertile Crescent in the Middle East.

moth bones to build homes.

The genetic comparison method has some modern-day application. evacuate their homes. "This is also a powerful tool for forensic science and paternity testing," Oefner said.
