DHAKA SUNDAY JULY 11, 2004

US Senators Pat Roberts (L), Republican of Kansas, and John D. Rockefeller IV, Democrat of West Virginia, hold the Senate Select Committee on Intelligence's report on Prewar Intelligence on Iraq during a press conference in the US Capitol building on Friday in Washington, DC.

CONTINUED FROM PAGE 21

related activities were occurring. The IC did not make it clear in its latter assessments that its judgments were based on layer upon layer of previous analytic judgments. This gave the reader of the NIE the impression that Iraq's chemical weapons program was advancing and growing, but did not convey that the assessment was based on very little direct or credible intelligence reporting.

(BLACKED OUT) Similarly the IC based its judgment that "all key aspects - research & development (R&D), production, and weaponization - of Iraq's offensive biological weapons (BW) program are active and that most elements are larger and more advanced than they were before the Gulf War" primarily on its assessment that Iraq had mobile biological production vans. While this assessment was based on direct intelligence that indicated rag had mobile biological production units, the reporting was largely from a single source to whom the Intelligence Community did not have direct access. The Committee believes that the IC's expectation that Iraq would move to mobile biological weapons production, focused their attention on reporting that supported that contention and led them to disregard information that contradicted it. This exemplifies Dr. Kay's concerns that the IC made large new conclusions based on only a few pieces of new evidence that were joined to previous conclusions and that pieces that did not fulfill its expectations tended to

bethrown aside. (U) These are just two, of many, examples of this layering effect the Committee found in the IC's analysis of Iraq's weapons of mass destruction programs. The Committee recognizes the importance of analysts' ability to perform this type of analytic extrapolation, particularly in trying to "connect the dots" of sometimes seemingly disparate pieces of intelligence. Incorporating and xplaining the cumulative underlying uncertainties inherent in that process is equally important, however.

(U) Conclusion 5. In each instance where the Committee found an analytic or collection failure, it resulted in part from a failure of Intelligence Community managers throughout their leadership chains to adequately supervise the work of their analysts and collectors. They did not encourage analysts to challenge their assumptions, fully consider alternative arguments, accurately characterize the intelligence reporting, or counsel analysts who lost their objectivity

(U) This report describes a variety of serious analytical and collectionfailures in the Intelligence Community's (1C) work on Iraq's weapons of mass destruction programs. While not in any way diminishing the responsibility of the analysts and collectors that were directly involved, the Committee believes that blame for these failures can not be laid at their feet alone, hi each instance, the analysts' and collectors' chains of command in their respective agencies, from immediate supervisors up to the National Intelligence Council and the Director of Central Intelligence all share responsibility for not encouraging analysts to challenge their assumptions fully consider alternative arguments or accurately characterize the intelligence reporting. They failed to adequately question and challenge analysts about their assessments, and, most importantly, to recognize when analysts had lost their objectivity and take corrective action. It seems likely that these failures of management and leadership resulted at least in part as a result of the fact that the Intelligence Community's chain of command shared with its analysts and collectors the same "group think" presumption that Iraq had active and expanded weapons of mass destruction programs.

(U) Conclusion 6. The Committee found significant short-comings in almost every aspect of the Intelligence Community's human intelligence collection efforts against Iraq's weapons of mass destruction activities in particular that the Community had no sources collecting against weapons of mass destruction in Iraq after 1998. Most, if not all, of these problems stem from a broken corporate culture and poor management, and will not be solved by additional funding and

personnel.

(U) The Committee's review into the prewar intelligence concerning Iraq's weapons of mass destruction programs has entailed an unprecedented outside examination of a broad range of the Intelligence Community's (1C) human intelligence (HUMINT) operations. The Committee found significant short-comings in almost every aspectoftheseoperations.

(BLACKED OUT) From 1991 to 1998, the IC relied too heavily on United Nations (UN) inspectors to collect information about Irao's weapons of mass destruction programs and did not develop a sufficient unilateral HUMINT collection effort targeting Iraq to supplement UN-collected information and to take its place upon the departure of the UN inspectors While the UN inspection process provided a valuable source of information, the IC should have used the time when inspectors were in Iraq to plan for the possibility that inspectors would leave and to develop sources who could continue to report after inspectors left.

(BLACKED OUT) Because the United States lacked an official presence inside Iraq, the Intelligence Community depended too heavily on defectors and foreign government services to obtain HUMINT information on Iraq's weapons of mass destruction activities. While these sources had the potential to provide some valuable information, they had a limited ability to provide the kind of detailed intelligence about current fraqi weapons of mass destruction efforts sought by U.S. policymakers Moreover, because the Intelligence Community did not have direct access to many of these sources, their credibility was difficult to assess and was often left to the foreign government services to Intelligence Community HUMINT efforts against a closed society like Iraq prior to Operation Iraqi Freedom were hobbled by the Intelligence Community's dependence on having an official U.S. presence in-country to mount clandestine HUMINT collection

(U) When UN inspectors departed Iraq, the placement of HUMINT agents and the development of unilateral sources inside Iraq were not top priorities for the Intelligence Community. The Intelligence Community did not have a single HUMINT source collecting against Iraq's weapons of mass destruction programs in Iraq after 1998. The Intelligence Community appears to have decided that the difficulty and risks inherent in developing sources or inserting operations officers into Iraq outweighed the potential benefits The Committee found no evidence that a lack of resources significantly prevented the Intelligence Community from developing sources or inserting

operationsofficersintolraq. (BLACKED OUT) BLACKED OUT. When Committee staff asked why the CIA had not considered placing a CIA officer in Iraq years pefore Operation Iraqi Freedom to investigate Iraq's weapons of mass destruction programs, a CIA officer said, "because it's very hard to sustain ... it takes a rare officer who can go in ... and survive scrutiny BLACKEDOUT for a long time." The Committee agrees that such operations are difficult and dangerous, but they should be within the norm of the CIA's activities and capabilities Senior CIA officials have repeatedly told the Committee that a significant increase in funding and personnel will be required to enable to the CIA to penetrate difficult HUMINT targets similar to prewar Iraq. The Committeebelieves, however, that if an officer willing and able to take suchan assignment really is "rare" at the CIA, the problem is less a question of resources than a need for dramatic changes in a risk averse

corporate culture. (U) Problems with the Intelligence Community's HUMINT efforts were also evident in the Intelligence Community's handling of Iraq's alleged efforts to acquire uranium from Niger. The Committee does not fault the CIA for exploiting the access enjoyed by the spouse of a CIA employee traveling to Niger. The Committee believes, however, that it is unfortunate, considering the significant resources available to the CIA, that this was the only option available. Given the nature of rapidly evolving global threats such as terrorism and

the proliferation of weapons and weapons technology, the Intelligence Community must develop meansto quicklyrespondto fleeting collectionopportunitiesoutside the Community's establishedoperating areas. The Committee also found otherproblems with the Intelligence Community's follow-up on the Iraq-Niger uranium issue, including a half-hearted investigation of the reported storage of uranium in a warehousein Benin, and a failure, to this day, to call a telephonenumber.

provided by the Navy, of an

individual who claimed to have

information about Iraq's alleged

efforts to acquire uranium from

(BLACKED OUT) The Committee also found that the Defense HUMINT Service (DHS) demonstrated serious lapses in its handling of the HUMINT source code named CURVE BALL, who was the principle source behind the Intelligence Community's assessmentsthat Iraq had a mobile biological weapons program. The DHS had primary responsibility for handling the Intelligence Community's interaction with the BLACKED OUT debriefers that were handling CURVE BALL, but the DHS officers that were involved in CURVE ball's case limited themselves to a largely administrative role, translating and passing along reports BLACKED OUT analysts do not have the benefit of the regular interaction with sources or, in this case, CURVE ball's debriefers, that could have allowed them to make judgments about the reliability of source

(U) Another significant problem found by the Committee is the fact that the CIA continues to excessively compartment sensitive HUMINT reporting and fails to share mportant information about HUMINT reporting and sources with Intelligence Community analystswho have a need to know. In the years before Operation Iraqi Freedom, the CIA protected its Iraq weapons of mass destruction sources so well that some of the information they provided was kept from the majority of analysts with a egitimate need to know. The biological weapons and delivery sections of this report discuss at length the CLA's failure to share important information about source reporting on Iraq's alleged mobilebiologicalweaponsprogram and unmannedaerial vehicle (UAV) program that left analysts and policymakers with an incomplete and, at times, misleading picture of

theseissues. (U) The process by which the Intelligence Community calculates the benefits and risks of sharing sensitive human intelligence is skewed too heavily toward withholdinginformation. This issue has been raised repeatedly with the Intelligence Community, particu-larly after the lack of information sharing was found to have played a keyrole in the intelligence failures of 9/11. The Committee believes that the Intelligence Community must reconsider whether the risks of expanding access to cleared analysts are truly greater than the risks of keeping information so tightly compartmented that the analysts who need it to make informed judgments are kept in the

(U) Conclusion 7. The Central IntelligenceAgency (CIA), in several significant instances, abused its unique position in the Intelligence Community particularly in terms of information sharing, to the detriment of the Intelligence Community's prewar analysis concerning Iraq's weapons of mass destruction programs.

(U) The Intelligence Community is not a level playing field when it comesto the competition of ideas in intelligenceanalysis The Director of Central Intelligence's (DCI's) responsibility, established by the National Security Act of 1947, to coordinate the nation's intelligence activities and correlate, evaluate, and disseminate intelligence that affects national security, provides the CIA with a unique position in the Intelligence Community The fact that the DCI is the head of the CIA and head of the Intelligence Community, the principal intelligenceadvisorto the President, and is responsible for protecting intelligence sources and methods, provides the CIA with unique access to policymakers and unique control of intelligence reporting. This arrangement was intended to coordinate the disparate elements of the Intelligence Community in order to provide the most accurate and objective analysis to policymakers. The Committee found that in practice, however, in the case of the Intelligence Community's analysis of Iraq's weapons of mass destruction programs, this arrangement actually undermined the provision of accurate and objective analysis by hampering intelligencesharing and allowing CIA analysts to control the presentation of information to policymakers and exclude analysis fromotheragencies (U) The Committee found in a number of cases that significant reportable intelligence was

sequestered in CIA Directorate of Operations (DO) cables, distribution of sensitive intelligencereports was excessively restricted, and CIA analysts were often provided with 'sensitive" information that was not made available to analysts who worked the same issues at other allsource analysis agencies. These restrictions, in several cases, kept information from analysts that was essential to their ability to make fully informed judgments. Analysts cannot be expected to formulate and present their best analysis to policymakers while having only partialknowledgeofanissue.

(BLACKED OUT) For example, important information concerning the reliability of two of the main sources on Iraq's alleged mobile biological weapons program was not available to most Iraq biological weapons analysts outside the CIA Some analysts at other agencies were aware of some of the credibility concems about the sources, but the CIA's DO did not disseminate cables throughout the Intelligence Community that would have provided this information to all Iraq biological weapons analysts. BLACKEDOUT

(BLACKED OUT) The CIA also failed to share important informa-tion about Iraq's UAV software procurement efforts with other intelligence analysts. The CIA did share sensitive information that indicated Iraq BLACKED OUT was trying to obtain mapping software that could only be used for mapping in the U.S. This suggested to many analysts that Iraq may have been intending to use the software to target the U.S. The CIA failed to pass on additional information, until well after the coordination and publication of the National ntelligence Estimate (NIE), BLACKED OUT. This information was essential for analysts to make fully informed judgments about Iraq's intentions to target the U.S.

(U) In some cases CIA analysts were not open to fully considering information and opinions from other intelligence analysts or creating a level playing field in which outside analysts fully participated in meetings or analytic efforts. This problem was particularly evident in the case of the CIA's analysis of Iraq's procurement of aluminum tubes during which the Committee believes the agency lost objectivityand in several cases took action that improperly excluded useful expertise from the intelligence debate. For example, the CIA performed testing of the tubes without inviting experts from the Department of Energy (DOE) to participate. A CIA analyst told Committee staff that the DOE was not invited "becausewe fundedit. It was our testing. We were trying to prove somethings that we wanted to prove with the testing. It wasn't a

joint effort." The Committee believes that such an effort should never have been intended to prove what the CIA wanted to prove, but should have been a Community effort to get to the truth about Iraq's intended use for the tubes. By excluding DOE analysts, the Intelligence Community's nuclear experts, the CIA was not able to take advantage of their potentially Valuable analytic insights. In another instance, an independent Department of Defense (DOD) rocket expert told the Committee that he did not think the CIA analysts came to him for an objective opinion, but were trying to encourage us to come up with [the] answer" that the tubes were not intended to be used for a rocket

(U) The Committee also found that while the DCI was supposed to function as both the head of the CIA and the head of the Intelligence Community in many instances he only acted as head of the CIA. For example, the DCI told the Committee that he was not aware that there were dissenting opinions within the Intelligence Community on whether Iraq intended use the aluminum tubes for a nuclear program until the NIE was drafted in September 2002, despite the fact that intelligence agencies had been fervently debating the issue since the spring of 2001. While the DCI, as the President's principal intelligence advisor, should provide policymakers, in particular the President, with the best analysis available from throughout the Intelligence Community the DCI told Committee staff that he does not even expect to learn of dissenting opinions "until the issue gets joined" through interagency coordination of an NIE. This means that contentious debate about significant national security issues can go on at the analytic level for months, or years, without the DCI or seniorpolicymakersbeinginformed of any opinions other than those of CIA analysts. In addition, the Presidential Daily Briefs (PDBs) are prepared by CIA analysts and are presented by CIA briefers who may or may not include an explanation of alternative views from other intelligence agencies. Other Intelligence Community agencies essentially must rely on the analysts who disagree with their positions to accurately convey their analysis to the nation's most senior policymakers.

(U) These factors worked together to allow CIA analysts and officials to provide the agency's intelligence analysis to senior policymakers without having to explain dissenting views or defend their analysis from potential challenges from other Intelligence Community agencies. The Committee believes that policymakers at all levels of government and in both the executive and legislative branches would benefit from understanding the full range of analytic opinions directly from the agencies who hold those views, or from truly impartial representatives of the entire IntelligenceCommunity

## OVERALL CONCLUSIONS -

TERRORISM
(U) Conclusion 8. Intelligence
Community analysts lack a
consistent post-September 11
approach to analyzing and
reportingonterroristthreats.

portingon terrorist threats.
(U) Though analysts have been

wrong on major issues in the past, no previous intelligence failure has been so costly as the September 11 attacks. As the Deputy Director of Intelligence (DDI) explained during an interview with Committee staff. terrorist threat analysts now use a different type of trade craft than generally employed by political, leadership or regional analysts. Threat analysts are encouraged to "push the envelope" and look at various possible threat scenarios that can be drawn from limited and often fragmentary information. As a result, analysts can no longer dismiss a threat as incredible because they cannot corroborate it. They cannot dismiss what may appear to be the rantings of a walkin until additional vetting shows thosestories to be fabricated.

(U) To compensate for the fragmentary nature of the reporting on Iraq's potentiallinks to al-Qaida, Intelligence Community (1C) analysts included as much detail as they could about the nature of the sources and went to great lengths to describe their analytic approach to the problem. For example, where information was limited to a single or untested source or to a foreign government service, a source description was provided. As discussed in more detail in the body of this report, a "Scope Note" was incorporated in each product to describe the analytic approach the drafters had taken to address the issue. In Iraq and al-Qaida: Interpreting a Murky Relationship the Scope Note explained that the authors had purposefully taken an aggressive approach to interpreting the available data. In both the September 2002 and January 2003 versions of Iraqi Support for Terrorism, the Scope Note did not describe an analytic approach, but rather it highlighted the gaps in information and described the analysts' understanding of the Iraqal-Qaidarelationshipas "evolving.

(U) Though the Committee understands the need for different analytical approaches and expressions of competing viewpoints, the IC should have considered that their readership would not necessarily understand the nuance between the first "purposely aggressive" approach and a return, in Iraqi Support/or Terrorism, to a more traditional analysis of the reporting concerning Iraq's links to al-Qaida, A consistent approach in both assessments which carefully explained the intelligence reports and then provided a spectrum of possible conclusions would have been more useful and would have assisted policymakers in their public characterizations of the intelli-

(U) Conclusion 9. Source protection policies within the Intelligence Community direct or encourage reports officers to exclude relevant detail about the nature of their sources. As a result, analysts community-wide are unable to make fully informed judgments about the information they receive, relying instead on nonspecific source lines to reach their assessments. Moreover, relevant operational data is nearly always withheld from analysts, putting them at a further analytical disadvantage.

(U) A significant portion of the intelligence reporting that was used to evaluate whether Iraq's interactions with al-Qaida operatives constituted a relationship was stripped of details prior to being made available to analysts community-wide. Source information and operational detail was provided only to Central Intelligence Agency (CIA) analysts This lack of information sharing limited the level of discussion and debate that should have taken place across the Community on this critical issue. Whilein the case of Iraq's links to terrorism, the final analysis has proven, thus far, to have been accurate and not affected by a lack of relevant source or operational detail, we cannot rely on this system in the future. Until changes are made concerning how and when source information is made available to analysts, we run the risk of missing critical data that might provide early warning.

(U) The absence of source and operational detail affects not only analysts, but policymakers as well. The Committee found that policymakers took an active role by personally examining individual intelligence reports for themselves. If this trend continues it is even more important that such relevant detailbe provided.

(BLACKED OUT) Conclusion 10.

The Intelligence Community relies too heavily on foreign government services and third party reporting, thereby increasing the potential for manipulation of U.S. policy by foreigninterests.

(BLACKED OUT) Due to the lack of unilateral sources on Iraq's links to terrorist groups like al-Qaida BLACKED OUT, the Intelligence Community (IC) relied too heavily on foreign government service reporting and sources to whom it did not have direct access to determine the relationship between Iraq and BLACKED OUT terrorist groups. While much of this reporting was credible, the IC left itself open to possible manipulation by foreign governments and other parties interested in influencing U.S. policy. The Intelligence Community's collectors must develop and recruit unilateral sources with direct access to terrorist groups to confirm, complement or confront foreign government service reporting on thesecriticaltargets

thesecritical targets.

(U) Conclusion 11. Several of the allegations of pressure on Intelligence Community (IC) analysts involved repeated questioning. The Committee believes that IC analysts should expect difficult and repeated questions regarding threat information. Just as the post 9/11 environment lowered the Intelligence Community's reporting threshold, it has also affected the intensity with which policymakers will review and question threat information.

(U) A number of the individuals interviewed by the Committee in conducting its review stated that Administration officials questioned analysts repeatedly on the potential for cooperation between Saddam Hussein's regime and al-Oaida. Though these allegations appeared repeatedly in the press and in other public reporting on the lead-up to the war, no analyst questioned by the Committee stated that the questions were unreasonable, or that they were encouraged by the questioning to alter their conclusions regarding Iraq's links to al-(U) In some cases, those

interviewed stated that the questions had forced them to go back and review the intelligence reporting and that during this

exercise they came across information they had overlooked in initial
readings The Committee found that
this process - the policymakers
probing questions - actually
improved the Central Intelligence
d Agency's (CIA) products The review
revealed that the CIA analysts who
prepared Iraqi Support for
I Terrorism made careful, measured
assessments which did not overstate
or mischaracterize the intelligence
reporting upon which it was based.

(U) The Committee also found
that CIA analysts are trained to
expect questions from

(U) The Committee also found that CIA analysts are trained to expect questions from policymakers and to tailor their analysis into a product that is useful to them. In an Occasional Paper on improving CIA analytic performance, written by a Research Fellow at the Sherman Kent Center, the fellowstates:

If the mission of intelligence

If the mission of intelligence analysis is to inform policymaking-to help the U.S. government anticipate threats and seize opportunities—then customization of analysis is the essence of the professional practice, not a defilement of it (i.e., politicization). In effect there is no such thing as an unprofessional policymaker question for intelligence to address so long as the answer reflects professional analytic trade craft (e.g., tough-minded weighing of evidence and open-minded consideration of alternatives). (Emphasisadded)

(U) The same Research Fellow commented on strategic warning stating, "Key to the warning challenge is that the substantive uncertainty surrounding threats to J.S. interests requires analysts, and policymakers to make judgments that are inherently vulnerable to error." This vulnerability has never been so apparent as in the failure to detect and deter the attacks on September 11, 2001. While analysts cannot dismiss a threat because at first glance it seems unreasonable or it cannot be corroborated by other credible reporting, policymakers have the ultimate responsibility for making decisions based on this same fragmentary, inconclusive reporting. If policymakers did not respond to analysts' caveated judgments with pointed, probing questions and did not require them to produce the most complete assessments possible, they would notbedoingtheirjobs.

## NIGERCONCLUSIONS

(U) Conclusion 12. Until October 2002 when the Intelligence Community obtained the forged foreign language documents2 on the Iraq-Niger uranium deal, it was reasonable for analysts to assess that Iraq may have been seeking uranium from Africa based on Central Intelligence Agency (CIA) reporting and other available intelligence 2 (BLACKED OFF) In March 2003, the Vice Chairman of the Committee Senator Rockefeller requested that the Federal Bureau of Investigation (FBI) investigate the source of the documents BLACKED OUT the motivation of those responsible for the forgeries, and the extent to which the forgeries were part of a disinformation campaign. Because of the FBI's current investigation into this matter, the Committee did not examine these

(U) Conclusion 13. The report on the former ambassador's trip to Niger, disseminated in March 2002, did not change any analysts' assessments of the Iraq-Niger uranium deal. For most analysts, the information in the report lent more credibility to the original Central IntelligenceAgency(CIA) reports on the uranium deal, but State Department Bureau of Intelligence and Research (INR) analysts believed that the report supported their assessment that Niger was unlikely to be willing or able to sell uranium to Iraq.

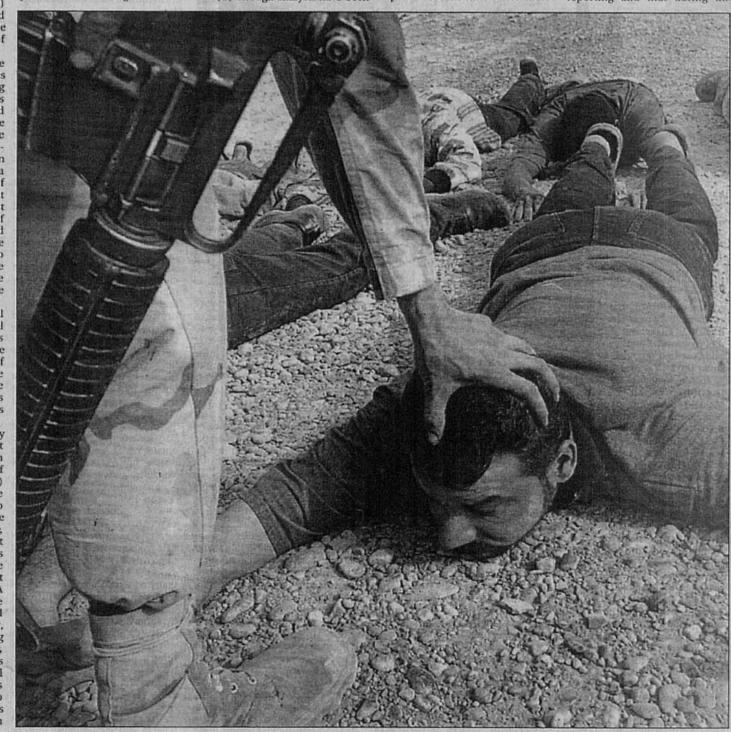

(U) Conclusion 14. The Centhal Intelligence Agency should have told the Vice President and other senior policymakersthat it had sent someone to Niger to look into the allegedfraq-Nigeruraniumdeal and should have briefed the Vice President on the former ambassador's findings.

(U) Conclusion 15. The Central Intelligence Agency's (CIA) Directorate of Operations should have taken precautions not to discuss the credibility of reporting with a potential source when it arranged a meeting with the former ambassador and Intelligence Communityanalysts

(U) Conclusion 16. The language in the October 2002 National Intelligence Estimate that "Iraq also began vigorously trying to procure uranium ore and yellowcake" overstated what the Intelligence Community knew about Iraq's possible procurement attempts

(U) Conclusion 17. The State Department's Bureau of Intelligence and Research (INR) dissent on the uranium reporting was accidentally included in the aluminum tube section of the National Intelligence Estimate (NIE), due in part to the speed with which the NIE was drafted and coordinated.

(U) Conclusion 18. When documents regarding the Iraq-Niger uranium reporting became available to the Intelligence Community in October 2002, Central Intelligence Agency (CIA) analysts and operations officers should have made an effort to obtain copies. As a result of not obtaining the documents CIA Iraq nuclear analysts continued to report on Iraqi efforts to procure uranium from Africa and continued to approve the use of such language in Administration publications and speeches
