3D Pool

If conventional billiards is too easy for your taste, perhaps you should turn pro. Or if that doesn't interest you, try playing in three dimensions. Zocker Toys 3D Pool makes the game a little more interesting by turning the play surface into three surfaces, forcing players to consider a far greater number of variables before each shot. It sort of reminds us of that multi-level chess set from Star Trek.

Mio DigiStruts Its Stuff

This week at Cebit, Taiwanese GPS/PDA maker Mio has launched a whole new line of navi-gadgets in its DigiWalker line, including this GPS smart phone, the Mio A701. Running Windows Mobile 5.0, the A701 sports a zippin' 520MHz Intel processor, carries up to 2GB of extra storage via its SD card slot, and includes a 1.3-megapixel camera. The A701 looks pretty slick for such a beefy PDA, and its a significant design departure from the company's more stoic products of years gone by. No pricing or availability information is available for this phone yet, but we'll be sure to revisit it soon.

Put On Your Dancing Shoes

If you're in the market for a new pair of boogie shoes, look no further than the Dada Code M. With a MP3 player built in, these sneakers give a whole new meaning to the phrase "fancy footwork." You transfer tunes to the shoes via a USB port, and they hold up to 100 songs. A full charge of the integrated battery will give you up to six hours of playback. Just push the buttons on the tongue to control your tracks and you'll be pumping the jams out of the speakers on the sides of these $199 shoes. Sorry, there's no display screen.
