Forward Versatile Disc

Forward Versatile Disc (FVD), is an offshoot of DVD developed in Taiwan jointly by the Advanced Optical Storage Research (AOSRA) and the Industrial Technology Research Institute (ITRI) as a more inexpensive alternative for high-definition content. The disc is similar in structure to a DVD, in that pit length is the same and a red laser is used to read it, but the track width has been shortened slightly to allow the disc to have 5.4GB of storage per layer as opposed to 4.7GB for a standard DVD. The specification allows for up to three layers for total of 15GB in storage. WMV9 is used as the video codec allowing for 135 minutes of 720p video on a dual layer disc and 135 minutes of 1080i video on a 3-layer disc. FVD uses AACS copy protection which is one of the schemes used in both HD DVD and Blu-ray Dics.

IT Tips

Disk Cleanup

The Disk Cleanup system tool allows you to clean out Windows components and programs you no longer need, and remove temporary files.

From the Start menu, click on Programs> Accessories> SystemTools> Disk Cleanup.
The main Disk Cleanup window shows two tabs - Disk Cleanup and More Options. In the Disk Cleanup tab window, put a tick in the following boxes if you wish to clean out these unnecessary files:

- Downloaded program files
- Temporary internet files
- Recycle bin
- Temporary files

Click on the More Options tab and you can choose to get rid of unwanted Windows components, remove installed programs you no longer use, and remove all but the most recent System restore point.
When you have selected everything you want to clean up, click on OK then Yes to confirm you want to begin the Disk Cleanup process.

Internet Explorer shortcuts

CTRL+B (Open the Organize Favorites dialog box)

CTRL+E (Open the Search bar)

CTRL+F (Start the Find utility)
