Drainage canal

Natural canals and water bodies are similar to veins and tissues in our body. It keeps our land and water mass in balance. Canals excrete out excess water and impurities, while water bodies provide the water needed to replenish our aquifer! These functions are critical to the health of our soil and environment.

These canals and wetlands are being grabbed by opportunists of all shades and sizes. Pinaki Roy's front-page pictorial report (July 14) is a detailed account of this activ-

ity at Hatirjheel, which goes on under the nose of the CTG even today! Poor canals and wetlands are orphans with no one to protect them barring a few noble environmentalists. Slowly and surly the unscrupulous land grabbers are getting the upper hand!

Our political governments over the years have ignored or encouraged this illegal activity to gain direct or indirect financial benefits. For the CTG, curbing these nefarious activities is as vital as curbing the unending greed of our politicians. The crux of the

issue as stated in the report is: "If Begunbari and Hatirjheel cannot be saved, the drainage balance of the capital will be completely destroyed."

This statement coming from responsible sources is serious indeed! Can we not take quick and firm corrective action? Possibly, it is now or never. These nefarious activities need to be nipped in the bud; the earlier the better for all of us.

further damaged. That aggressive group realized the situation to some extent but commanded the drive to go to DUCSU office for some kind of action against those who dared to damage the Dhaka University vehicle. We had to spend some time at the DUCSU office, after a few hours all of us had to walk and take public bus or rickshaw to go home. For another 4 days we did not get the DU bus. Needless to say, DUCSU could not do anything, DU transport-authorities had to repair the damage at their own cost. All these could have been prevented if the small aggressive group let the bus driver take an alternate route.

The above story depicts the very nature of our politicians. Like that small aggressive group, our politicians led the whole nation to disaster.

We were finally saved on 1/11 after the present caretaker government took over. Our politicians enjoyed tremendous power and they abused the power in all possible ways, plundering the poor country. Now we hear about the formation of a National Security Council to create a balance of power. Next time, whenever a party forms a government, the Security Council should intervene in all the major decisions (big purchases, big contracts, etc.). The Security Council should even have the veto power to prevent any further plundering. Our country cannot afford repeated failures of the political parties.

Road accidents

Reckless driving, narrow roads, untrained or inexperienced drivers are the main causes of road accidents. But, above all, flouting of driving rules is the prime cause of such accidents.

The authorities concerned have to take the necessary steps to reduce the number of accidents.

Laloo's dream

The mercurial and media friendly former chief minister of Bihar and present Indian Union Minister for Railways Mr. Laloo Prasad Yadav is once again in news. He has told the media about his wish of seeing India and Pakistan united as one country. He has cited example of East and West Germany's union after remaining separated for a few decades. I find some justification in his statement although majority would term it as wishful thinking. If it happens, then one of the social crimes done in the history of the world would be partially taken care of. The great leaders of undivided India, except Mohammed Ali Jinnah, could clearly see the long term implications and the disaster waiting for the millions of people of the sub-continent. The forecast of the wise men came true as the world thereafter saw the worst riots, killings, arsons migrations never witnessed before.

The inhuman brutality and the worst carnage was carried out on neighbours, while friends turned bitter enemies. Blood relatives were separated so inhumanly that they never met again in life. Nephews and nieces became grand parents themselves without meeting their uncles. What a tragedy faced by the people of the sub-continent. The 1st and 2nd world wars were fought for limited period but the curse of partition of India will continue for generations to come.

I expect many more Lalooos to raise their voices for this noble cause.

Comments

I have read very carefully the article by Mahfuzur Rahman (13 July). It does not tell us anything new about this issue. However, it presents a fair summary of some experts' views. What is not clear is how the ice melts in the polar caps and high mountain glaciers due to global warming of only a couple of degrees! Any science student knows that ice melts at zero degree celsius whereas the ambient air temperature at the polar caps and mountain glacier areas is normally around minus 20 degrees which may have risen by say three degrees due to global warming to about minus 17 degrees.

I have broached this question to many other scientists and climatologists, but like politicians they have always failed to register the question, let alone attempt an answer.

It therefore appears that the melting of ice is accomplished by extra radiance from the sun, it is radiation rather than convection or conduction mechanism of heat transfer which is the culprit. It is this same extra radiant heat which is causing the global warming, rather

than the greenhouse effect of at most 5% of carbon dioxide in the atmosphere; 95% of greenhouse gases in the atmosphere is water vapour, and its relative concentration is rising due to extra heat from the sun, causing further global warming much more quickly.

If this extra water vapour can be coagulated to form rain clouds its percentage would decrease to reduce greenhouse effect much more effectively than carbon reduction, and the extra clouds would reflect the sunlight back to space to cool the earth.

So the fundamental problem seems to be global drought as there has been no rain for many years in large parts of all the continents. A lack of cloud cover over Australia and its vicinity for the last seven years or more is melting the Antarctic ice caps. In the US a forest fire is now burning everything in its path as not a drop of rain has fallen in those areas in many years. All the deserts are expanding out of control due to lack of rain. In Chad and Darfur areas there has not been any rain for 15 years or more. Whatever rain is there, it is unpredictable, sudden and irregular causing flash floods and many other problems and not bringing any steady improvement in the drought situation.

With reduction of carbon dioxide, side by side the production of rain clouds from water vapour should be studied to offset the radiance from the sun as the latter is so much more important. The Chinese preparing for the Olympics seems to have mastered the technique of precipitating rain out of rain clouds whenever they desire. They and others must now concentrate on how to produce rain clouds from excessive humidity in the atmosphere.

Thank you, General

I read the news of an octogenarian peasant being jailed for his failure to pay back bank loans. But I could not think it the way you thought about it. On the following day, I read about your initiative to free the aged man from the impending plight. I was emotionally overwhelmed by your exemplary action. It is indeed a rare act of selflessness.

Your prompt action for the release of the helpless man has rekindled the hope inside millions.

Sk. Hasina's courage

I congratulate Sk. Hasina for her courage to speak out against the government. We need politicians who have courage, not the ones sailing with the wind.

I think her voice is very important for the poor and oppressed people of Bangladesh.

In response...

I am writing to protest against Syed M Fahim's letter titled 'Sheikh Hasina's assertion'. She is a mother and could reasonably be worried about herailing daughter. There is nothing wrong with it.

Mr. Fahim could make comments on the failure of political leaders, but how could he hold only Sheikh Hasina responsible for the corruption in the country? If you want to blame any party for the rampant corruption, then it is the BNP.

Afsana Islam
On e-mail

A mother!

It was quite moving to read Sheikh Hasina's open letter written as a "mother" seeking to give company to her pregnant daughter living in the US. Many mothers like me would surely sympathize with the sacrifice she had to make in depriving her children for the sake of the nation.

Hasina should use this opportunity to realise what pain she had caused to mothers like us when living in the same city many of us could not visit our pregnant daughters because of the non-stop or *lagatar hartal* she so recklessly imposed upon us.

She has our sympathy as a mother but not any support for what she and the other lady did to many mothers like us.

Rajuk

At long last, Rajuk is facing the music. Better late than never! Comparing Rajuk to anything else would be unrealistic. However, how about this: Rajuk the "Empire State Building" of nepotism and corruption! Nothing moves here; without dry and fresh currency notes' lubrication! All cash please! It is unbelievable.

Dwindling playgrounds

Playgrounds were once known to be the heart of a school but at present we can hardly find any educational institution having one of its own. Our city has now an acute shortage of playgrounds. A parade field is located near our university. I see students playing

there, but to my disappointment it seems that the number of players is too large for the small ground.

Once the cities and towns had enough playgrounds for the students but at present if we make a survey throughout the whole country, we will definitely

find that their number is too small.

Now the time has come for the City Corporation and Chittagong Development Authority (CDA) to address the issue.

Bad politics

Frustration in the society is mainly due to poor governance. Different regimes are created based on corrupt practices, nepotism, and others have variations of philosophy of approach, and there are grey areas in details in the implementation.

Public interest loses its focus, and non-essential projects siphon off a large percentage of public development funds. The question arises whether the long 5-year regimes are suitable for the LDCs, dominated by have-nots, regardless of vertical status in the society. Shorter terms would increase the speed of corrupt practices.

Hence the solution lies in the preceding stages of governance, that is, an efficient filtration process for entry and exit. When party interest precedes national interest, the system losses mount, and accountability suffers.

The official monitoring agencies are lax in field and file work, as the syndicates inside and outside control the outcome-- something we have seen during the last 16 years. One key area for improvement is the feedback system; and then the follow-up for deterrent measures. Notice the intentional [or forced] lapses of Rajuk during the

political regimes; and now Rajuk is demolishing its own approvals, under supervision of the CTG, backed by the army.

The problem is: bad teams, perverted policy makers, non-essential development projects, and creation of back and grey holes/areas.

Now we have to go back to the basics; clean candidates, correct voter list, and transparent voting procedure. Naturally, the politicians are nagging, on the usurpation of their domain. Good dedicated leaders of the society are now trying to channel the nation into better governance. The after-effects and fall-outs cannot be remedied readily.

So the current situation is like the monsoon sky: hazy, cloudy, sun-shine, overcast, raining, thunderstorms windy, stormy, and what not! This type of political circus is not abnormal in newly emerged nations (Asia, Africa, S.America).

Patience is a dubious virtue, according to the grey politicians. Usually, it is a necessity, and sometimes a national obligation. We have to build a sound foundation; thereafter the structures and infra-structures follow at routine pace. Let us not beat about the bush.

Tigers

Legendary cricketer Imran Khan once said that successful people always know their limitations and work accordingly. They always improvise on that work to make the end results even better.

I am an ardent fan of the Tigers and as much I love to

watch them playing competitive cricket, I hate to see them fail so miserably in Test cricket as they did against the Lankans. Let me put a fact on the table before I go any further. Bangladesh are in no position to continue Test cricket against higher ranked teams until they

learn to play the longer version of the game with greater patience and better technique.

Despite our shortcomings, I am still very positive and patient and quite confident that our future is bright.

It is very frustrating to read news like collapse of a building constructed or under construction. Recently, the under-construction East West Medical College and Hospital building collapsed

and three people were killed.

The one and only reason is very obvious: use of sub-standard raw materials like bricks and cement. Poor design and improper choice

of location are also responsible partially.

I think the government must be tough on the violators of building codes.
