World's Largest Wind Turbine Being Built in Germany

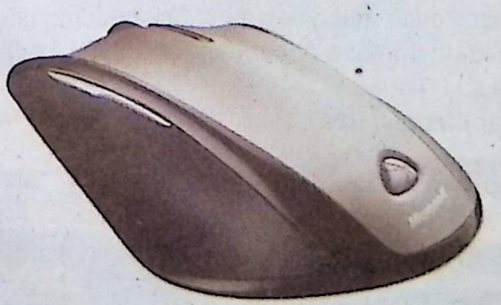

This is the Enercon E-126, the world's largest wind turbine that's currently being installed in Germany. This turbine generates over 7 Megawatts of electrical power, which is enough to power about 5,000 four-person households in Europe. It's got an insane 413,830-foot wingspan, and it's specially designed to kill as few birds as possible, which was a nice touch.

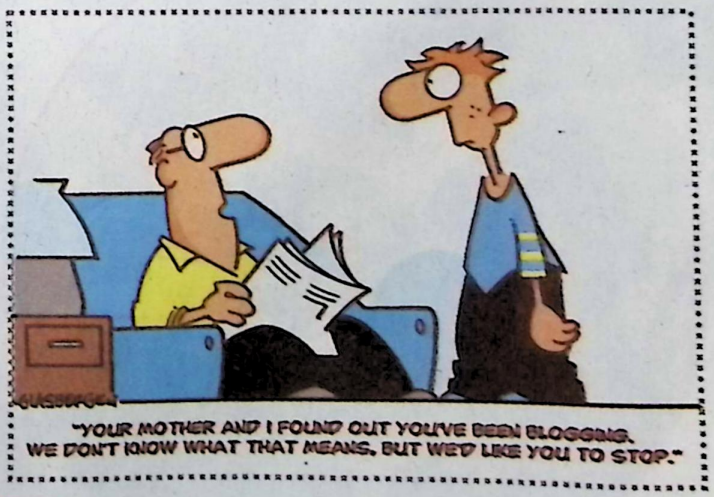

We can seriously start to think about renewable energy forms like this in Bangladesh as well. Wind power is as renewable as energy gets and it is also 100 % environment friendly.

The All New Microsoft Wireless Laser Mouse

This is the all new pair of laser mice from Microsoft Laser Mouse 6000 and 7000. They have a great new shape and look and both use 2.4 GHz wireless, track at 1,000 dpi, have one-touch Flip 3D access and tell you in pretty colors how much battery life they have left. The bigger desktop model, 7000, is black and rechargeable and costs $70(BDT 4900). The mid-sized 6000 is meant to hit both desktops and notebooks, with a portable receiver and costs $50. (BDT 3500)
