Solving the Sleep Problem

IMRAN H. KHAN

We are in an age where comfort rules over rationale. The simplest example I have come across to date is a PC mouse (which I purchased recently) with a Double Click button. The main idea is to save time and energy. That's music to my ears. Now imagine the whole idea of saving time, saving energy and comfort. They all seem to go hand in hand as technology moves ahead. In today's world we spend more time at our computer than ever before. Whether it's for work, to watch a movie on your DVD player, catch up with friends on Facebook, to search for information on Google, check mail, play games, the entertainment seems endless. I for one tend to lose track of time when I'm on the computer. Being the hedonistic creature that is man, I am constantly in need of comfort. My prayer seems to have an answer through the Nex-Sys Corner V1 Desk. While the design could fool anyone into thinking that it's a set of drums, the Corner V1 has support for 2.1 speakers, height adjustable flat screen monitor and comes with a custom car seat to suit your disposition on the day. Sadly this piece of heaven comes with a price tag of $1,700. It comes in a range of colors and offers you relaxation that you might never have felt before, but maybe I'm going to wait just a little bit more and see what more I can squeeze in when I'm going to purchase something for that agonising price.

Detects the upper and lower eyelids, calculating how open the eyes are.

Ok now the next thing that most people correlate with comfort (but which sadly does not apply for me) is sleep. But some geniuses at DARPA, the Pentagon's research wing are busy at work, creating a new nasal spray that could make sleep obsolete. It's called Orexin A, and just a couple snorts of it could allow you to be awake and alert for tens and tens of hours straight with no negative side effects. But if you have watched the
