

Nokia MD-8 Mini-Speakers

Nokia's MD-8 battery-powered mini speakers looks way too cute! In lacquered black with a red trim, the tube-shaped gizmo has a hinged end which flips open to reveal the two speakers. The pocket-sized stereo speakers also have an FM antenna, tangle-free cables, and will give you 40 hours of noise before you have to replace the battery. Its supposed to come out before July, but there's no indication of price as yet.

Dell Introduces Their Smallest, Greenest PC Yet

Michael Dell, the king of Dell, just previewed his company's smallest and greenest desktop PC yet at FORTUNE Brainstorm: GREEN. There's no name for this mini green PC, but it's 81% smaller than a mini tower and 70% less energy-consuming. It's also shipped in recycled and recyclable packaging. As long as this machine is at least as powerful as a laptop we should all be supporting Dell's enviro-conscious direction.

Honda's Assisted Walking Device is a Asimo lookalike!

Honda has developed a gadget that they say could make walking easier for the elderly and others with weak leg muscles. The aptly named Walking Assist Device is a 6 lb. motorized belt with hip sensors that gauge how much help the wearer will need. The motor then gives the wearer an appropriate boost, lengthening his or her stride enough to make walking easier on the legs.
