

hundreds of servers, and schedules various files to be downloaded consecutively one after another. Plus, you can even program it to turn off your PC when download finishes. A good website for finding download links of these servers is (www.filestube.com).

Part 4: The last and the most complicated of all the phases are the download of movies and games. Gone are the days of downloading with outmoded software like Ares, Kazaa and Limeware. This is the age of torrents. Dear readers, say hello to Utorrent, Bittorrent and Bitcomet. Most of you all maybe unfamiliar with these software and thus, let me enlighten you on this situation. Torrents are files that create links to thousands of PCs all over the world, having the same files you want to download. It is quite similar to Kazaa and its associates, but much safer, quicker and reliable. You can download any and every file you could ever want, starting from the oldest to the latest, be it movies, games, books, the most happening music videos, serials like Heroes Season 3 and even anime. All you have to do is, download any of the mentioned software's above, get the torrent files, which are actually small files to link your PC to the people who have the same file, from torrent sharing servers like (www.mininova.org), select add torrent from the inside of your torrent downloading software and lastly choose a desired directory for saving them to your PC. Some information you do need to know are; when downloading anything from torrents, check how many seeders(S) and leechers (L) there are. Seeders are the number of people who have the full file and leechers are the people who are downloading them. The system is excellent in the sense that, everyone has to upload and download at the same time. This means that every file is broken into numerous parts and the parts you have may not be the same as someone else's. Thus, no one has to have the full file to upload and so everyone is getting a share and at the end ends up with the full file. Download speed is unlimited, meaning it will give you any amount of speed that your connection can offer. There is obviously the facility of resume support plus, sizes of files doesn't matter, meaning there are whole seasons of serials like Friends or That 70's Show, which are closely about 35GB. However, some of you may not be able to download from these websites, if your broadband service providers blocked it. This is usually because, the program tends to take a lot of bandwidth. Other than that, happy downloading!

the sizes of the files are above 10MB and also because these websites don't support the use of download accelerators. This means that there is no resume, and if there is a single interruption, you have to begin the download again. Most of us have come across this ordeal whenever we have to download files from these sites. Moreover, if you are not a registered user to these servers, you are given a lot of limitations. The fact is that, there is no straight solution but an alternate path to ease the problem. First of all it is better if you allocate time during the midnight to download from these websites. The second problem obviously is the disruption of your snooze time. This can be fixed by downloading Rapget from (www.rapget.com). This marvelous piece of software enables users to copy and paste download links of files of
