

In Bangladesh the technical education grading system was first introduced in KUET in 1987. Among the Engineering Universities in Bangladesh department wise independent examination was also first introduced in KUET. This step helped reduce session jam to a great extent. In 1998 KUET first started the "course credit" system.

Students of KUET also involve themselves in many extra curricular activities. Students of the 2005 batch, Department of Mechanical Engineering formed a foundation named "ME 2005 Welfare Foundation" to assist the needy students. There is a blood donation group formed by the students working under the name of "DREAM". They collect blood from the students and supply it to the patients in cases of emergency. The students have formed their own theatre group that presents enjoyable shows. A film society -"KUET Film Society" is also very active in the campus, which arranges shows in the university auditorium. KDS, the KUET Debating Society also gives the opportunity to the students to express themselves and convey their thoughts on different vital social issues.

KDS secured the second position in the inter university debate championship in the year 2005. An Astronomical Association is also working here to encourage the interest in astronomy among the students. Different sports event competitions and study tour is arranged under the banner of these associations. Thus KUET projects the idea of a model institution leading its way in the arena of engineering and technology.
