

Many of the students had no idea about the surprise that was waiting for them. Well-known writer and science whiz M Zafar Iqbal had brought out a little amount of his time from his busy schedules to attend the ceremony. As he entered the auditorium hall, the students greeted him with flowers.

When it was his turn to speak, the entire place had prevailing silence as everyone wanted to hear what this great man had to say. He knowing these young students said hello to them in a very casual manner. He admitted that he would rather be amongst young people than chalking out plans with an older group. He believed that young people can recharge the minds of someone who is not so young like him.M Zafar Iqbal talked about the currents situation of science education in the country on the contest of the program. His main concern was job availability after a student has graduated from a science discipline. Our objective should be to ensure employment for the students studying science so that the fear of remaining unemployed does not determine the number of students who might want to learn about science. Computer programming should be encouraged among students. The basic concept of the subject should be made clear. Notable business organizations of the country should come forward in assisting educational institutions to promote the science culture.

The general manager of PRAN-RFL group, the proud sponsors of the event also spoke on the occasion. He thanked Mrs. Rina Dash for inviting him to such a lovely program. He appreciated the efforts of these young students and shared his personal feelings about coming to meet them. He said it was quite some time that he had left behind studentship and felt extremely lucky to be around students again. Later some students from the previous batches were awarded for their achievements. The science club president also thanked the teachers and the participants once again and announced that the results will be read out any moment. Meanwhile students from guest colleges articulated their thoughts about taking part in a science festival. At last, the teachers who helped systematize the event and the display of projects were called on stage to declare the winners.
