The Government and other concerned bodies need to assist the small and medium scale entrepreneurs with adequate training and necessary funding.

I will foster the prosperous business sectors

In the past we have seen many prosperous sectors of our country being ruined by bad governance and utter carelessness. The jute sector of our country is a burning example of that. Despite the drawbacks of the international market, certain sectors are booming in Bangladesh. These business sectors can be the solution to many of our problems. As a nation, perhaps the most important resolution of Bangladesh should be to identify these sectors, and assist them to grow.

At a time when employment seems hard to come by, the Call Center Industry in Bangladesh is generating a lot of hope. The global outsourcing industry holds within itself a lot of prospects for Bangladesh. India is currently experiencing an overspill in the call center market. Being close to India, Bangladesh has all the opportunities of becoming the next emerging destination for offshore call centers.

ICT is another booming sector in Bangladesh. The importance of the Internet in establishing an efficient medium for communication is undeniable. Since import duties and VAT have been removed from all computer hardware and software, the price of computers has gone significantly down. As a result personal computers are gradually becoming a common element in every urban household. Moreover, telecom industry in Bangladesh has also grown over the past few years thereby strengthening the ICT sector. After the installment of Submarine Cable connection to Global Information Superhighway, the ICT sector of Bangladesh is looking even more prosperous. Currently 5000 ICT graduates are entering the job market every year. These graduates can be trained to work for foreign organizations. ICT can also be used to improve the e-Commerce of our country.

And finally, the RMG sector of Bangladesh requires a massive rebranding.
