About the students' caliber or merit, I think, students entering this university every year face huge competition in the admission test. 65,000 candidates applied for the admission in this university and only 1,500 students were selected out of them. So, if you ask me about the level of standard of the students, I'd say that they are highly talented. We have many highly qualified and experienced teachers as well.

SC: Tell me something about the future of JU.

PMM: We are planning to build two residential halls for boys and girls. We need necessary financial support to enrich the departments' seminar library and the central library as well. We need some useful equipments, instruments for higher research and learning of students and teachers.

Teachers have to create the favourable environment of studies for the students. And I'm confident if we can ensure all these necessary things for students in this university, the ranking of the standard of studies in JU will get up to the top very soon.
