Imrul Hossain Bhuiyan, country business manager of HP-PSG Bangladesh addressed the programme saying the consumer market is the key focus for the company in the country.

Ng Tian-Chong said the mobility, greater adoption of international brands, and increasing consumer demand for PCs and notebooks are the main drivers of growth for the computing market.

Philip Lau, country general manager of HP-PSG RoAEC said on-the-ground initiatives, specialised customer promotions and partner programmes would be continued to drive the consumer market in Bangladesh for HP.

telecom industry

The Internet giant billed the touchscreen device, the culmination of collaboration with Taiwanese electronics titan HTC, a 'superphone' that marked the next step in the evolution of its Android software. "I think you will see it pushes the limits

of what's possible on a smart phone," HTC chief executive Peter Chou said as the smartphone debuted at Google headquarters in Mountain View, California. "It is very thin and feels good in your

hand.'

Nexus One handsets are no thicker than pencils and no heavier than keychain Swiss Army knives, Google engineer Erick Tseng said while demonstrating one of the smartphones. "It is a great marriage of form

and function," Tseng said.

Nexus One smartphones are built on the same Android 2.1 software that runs Droid smartphones that recently hit the market with innovations like 3D graphics, according to Tseng. The handsets feature new

speech command capabilities

that allow users to speak emails, text messages or Internet search queries. Nexus One devices can provide turn-

by-turn spoken driving directions from a Google mapping program.

Google launched its own online store to market are kind of lackluster. One of the

Banglalink 'Jigyasha' wins Roundtable Asia Mobile Awards 2009

IT.TELECOM DESK

Banglalink Jigyasha won the Best Mobile Enterprise Application Product or Service award at the Asia Mobile Awards 2009. Organised by the GSM Association, the apex body of GSM operators around the world, the Asia Mobile Awards are designed to highlight and reward the change-driving products, services, innovation and initiatives across the mobile eco-system that serve the diverse Asian marketplace.

Banglalink, the second largest mobile operator in Bangladesh have always tried to make a difference in the lives of people by providing appropriate communication solutions. In line with such efforts, Banglalink pioneered to launch this unique service called "banglalink jigyasha". The first phase of 'Krishi (agriculture) Jigyasha 7676' service was launched on December 19, 2008, and the second phase 'Babsha

(business) Jigyasha 7677' was launched on August 28,

Commenting on this prestigious achievement, Banglalink CEO Ahmed Abou Doma said "Banglalink has always been the market leader in driving value, firstly by making mobile telephony affordable and available to the masses, and building on it thereafter

through our innovative products and services that truly make a difference in the lives and livelihoods of the people of Bangladesh". He further added, "Being recognised on a truly global scale by the apex body of GSM operators is a remarkable honor and something that we can be really proud of as Bangladeshis".

Before this service was launched, farmers and SME owners had to travel to a number of different sources to find all the relevant information. But with 'banglalink jigyasha' SME owners and farmers from any part of Bangladesh are able to get the solutions to their problems by simply dialing 7676 or 7677 from their Banglalink connections.

The winner of the GSMA's Asia Mobile Awards 2009 was announced on November 18, 2009, at the Mobile Asia Congress in Hong Kong. Shihab Ahmed, marketiing director of Banglalink received the award on behalf of Orascom Telecom and Banglalink.

on 'One year

Despite some developments towards 'Digital Bangladesh', coordination in achieving the goal has become the most essential need of the time, speakers said at a roundtable on 'One year of Digital Bangladesh'organised by Bangladesh ICT Journalist Forum (BIJF) on

January 16. They also suggested appointing an adviser to oversee the process and reforming the ministries concerned to make

it organised, if necessary. Hasanul Haq Inu, chairman of the parliamentary standing committee for post and telecommunication ministry chaired the roundtable while Dr. Akram Hossain Chowdhury, MP and chairman of Centre for e-Parliament Research was special guest at the event. Mohammad Kawsar Uddin, president, BIJF,

convened the roundtable. Inu at the event said a lot of effort is already in process towards developing 'Digital Bangaldesh', but people are unaware of the situation because of irregular developments and lack of information. He expressed the need of a coordinator to centrally manage the whole process.

The speakers also expressed the need of public and private partnership towards faster implementation of the vision 2021.
