ns to Go Green

As solar powered cell-phones gain popularity, cell-phone chargers are also becoming eco-friendly. In a very short time cell-phone chargers with environment friendly materials and powered by renewable energy sources will be available in market. There are also plans for mobile phone cells that can generate power from water or some unusual sources like cold drink or alcohol!!

So we hope the day is not far when the cell-phone communication system will be fully powered by renewable energy and we will get a total 'green' communication system. Till then let's continue the practice of saving unnecessary power wastage by unplugging the charger when the battery is full.
