

DHAKA BLOOMS IN COLOURS

Dhaka city has a new look as full bloom of gulmohar (Krisnochura) and Sonalu Rahadachura spread colours in the capital. Spring began in mid February in Bangladesh but the colours of the season have turned more prominent in Summer. While the city's growth is dominated by stones, bricks, tarmac and concrete some green patches still remain providing the citizens a glimpse of the colours nature can put on. Many plants and trees stand with sprouted new leaves, and bees and butterflies fly from one flower to the other to the bliss of onlookers.
