1	Brief Description of the services	:	Terms of Reference (TOR) for Software Development of 'Economic Census 2013'.
	Services		Economic census is a means of identification and listing of collected basic economic statistics as part of an integrated program of data collection and compilation aimed at providing a comprehensive source of statistical information for economic and social development planning, for administrative purposes, for assessing conditions in human settlements, for research and for commercial and other uses. The value of the census is increased if the results can be employed together with the results of other economic surveys, as in
			the use of the census data as a basis or benchmark for short-term statistics. It can, for example, provide a statistical frame for other censuses or sample surveys. Of course, census-type information can also be derived from administrative registers and sample

ed together with the results of other economic surveys, as in stics. It can, for example, provide a statistical frame for other also be derived from administrative registers and sample
