'extinguish'

Secret "Russian subs" off Sweden, tit-for-tat sanctions, Nato fighters scrambling to intercept Russian warplanes: relations between the West and Moscow over Ukraine have sparked incidents reminiscent of the Cold War that terrified the world for decades.

Even Cold War doyen Mikhail Gorbachev used the highly symbolic 25th anniversary of the fall of the Berlin Wall to warn the world was "on the brink of a new Cold War", adding that "some are even saying that it has already begun".

And it's not just former leaders. Finland's PM also sounded the alarm, saying that Russia's actions over Ukraine were bringing the world to the "brink of a Cold War."

But while experts agree that the current situation is extremely dangerous, they say it is very different to when the two nucleararmed superpowers faced off, seemingly only minutes away from all-out global destruction.

Instead of a Cold War, experts see a period of geopolitical rebalancing after years of the United States assuming the role of sole superpower.

"Saying that we're in a Cold War is to misunderstand the situation," says Vladimir Evseev, director of the Moscow-based thinktank NCO Public Political Studies Center.

"This isn't a Cold War, but a period of transition. Western domination is coming to an end. The West can no longer impose its will on the world," added the expert. "The most important

difference today is the factor of China," said Sergey Radchenko, an expert on Russia and the Cold War at Britain's Aberystwyth University.

"Today, China is the greatest assurance Russia has that it will not be isolated, neither politically nor economically. The difference is great, and the gist of it is that the West will find it a lot more difficult to deter Russia through a show of force," Radchenko told AFP.

Heads of states and international organizations pose for the "family photo" during the G20 Summit in Brisbane, yesterday. Australia is hosting the leaders of the world's 20 biggest economies for the G20 summit.

PHILAE digs treasure

AFP, Paris

Europe's science probe Philae sent home a treasure trove of data from a comet heading towards the Sun before falling silent as its power ran out, mission control said yesterday.

Crowning a historic feat, the robot lab streamed data from its experiments back to its mother ship

Rosetta in the final hours before its battery ran down. This included the outcome of an eagerly-waited chemistry test of a sample drilled from the comet's icy and dusty surface, scientists said.

"Rosetta's lander has completed its primary science mission," the European Space Agency (ESA) said.

Lacking power, its instruments and most systems went into standby mode after three days of nonstop work, sending back data that will keep scientists busy for years.

"The data collected by Philae and Rosetta is set to make this mission a game-changer in cometary

An illustration of comet probe Philae

science," said Matt Taylor, Rosetta project scientist. Philae had landed in a dark shadow after a bouncy triple touchdown Wednesday. It did not get enough sunlight to recharge its batteries sufficiently to extend its mission beyond its initial 60-hour work programme. Mission engineers do not rule out making contact with the lander in the coming months as Comet 67P moves closer to the Sun.

Conceived more than 20 years ago, the Rosetta mission aims at shedding light on the origins of the Solar System 4.6 billion years ago, and maybe even life on Earth. A theory gaining ground in astrophysics is that the fledgling Earth was pounded by these bodies of cosmic ice and carbon-rich dust, seeding our planet with the basics to start life.

Rosetta and its payload travelled more than six billion kilometres, racing around the inner Solar System before they caught up with the comet in August this year.

UK prepared to walk away from EU

Says Hammond AFP, London

Britain will walk away from negotiations with European Union partners if its pleas for immigration reform are ignored, raising the real possibility of leaving the bloc altogether, Foreign Secretary Philip Hammond said Friday.

Hammond told the Daily Telegraph that the British public could vote to end the country's membership unless there was "substantial, meaningful reform" from Brussels.

Prime Minister David Cameron has promised an in-out referendum for 2017 if his Conservative Party wins next year's general election, bit has failed to win support for border reforms from fellow European leaders.

German Chancellor Angela Merkel last week warned her British counterpart that he was approaching a "point of no return" with the EU over his immigration proposals, according to a German news report. However, Hammond insisted that there would be no turning back, saying that Britain would be "prepared to stand up from the table and walk away" if its proposals were not considered.

Iraq retakes main oil refinery

ing away.

AFP, Kirkuk

Iraqi forces broke a months-long siege by Islamic State group fighters of the country's largest oil refinery yesterday as America's top officer flew in to discuss the expanded war against the

jihadists. Completely expelling ISIS fighters from the area around the refinery would mark another significant achievement for Baghdad, a day after pro-government forces retook the nearby town of Baiji.

"Iraqi forces... reached the gate of the refinery," the governor of Salaheddin province, Raad al-Juburi, told AFP.

Three officers confirmed that Iraqi forces had reached the refinery, 200 kilometres north of Baghdad, where security forces have been encircled and

under repeated attack since June. The new success for Iraqi forces came a day after they recaptured nearby Baiji, the largest town they have taken back since ISIS-led militants swept across Iraq's Sunni Arab heartland in June.

Fully clearing the Baiji area of jihadist fighters would further boost Baghdad's momentum and cap a week which also saw pro-government forces retake a major dam in Diyala.

WAR ON ISIS

Top US military general arrives in Iraq

Turkey, US to train 2,000 Syrian rebels

US denies Qaeda-ISIS nexus in Syria

Meanwhile, America's top military officer, General Martin Dempsey, arrived in Iraq for talks on the expanding military operations against the jihadists.

A US-led coalition is carrying out air strikes against ISIS jihadists in both

Iraq and Syria, while Washington has announced plans to increase the number of its military personnel in the country to up to 3,100.

Washington has repeatedly stated that it will not deploy "combat troops" to Iraq, but Dempsey said on Thursday that sending out advisers alongside Iraqi forces was something that "we're certainly considering."

Meanwhile, Turkey and the United States have agreed a plan under which some 2,000 fighters from the moderate Syrian opposition would be trained on Turkish soil, a report said Saturday.

On Friday, US intelligence chief James Clapper said analysts had not seen any evidence indicating Islamic State jihadists and Al-Qaeda had forged an alliance in Syria.

Clapper, the Director of National Intelligence, told CBS television US experts were unaware of any pact between the two groups, which would potentially complicate the US-led military campaign in Syria.

"We don't see that," Clapper said.

'Major milestone' in Polio battle

INDEPENDENT.CO.UK

A "major milestone" in the global eradication of polio has been reached, according to the US Centres for Diseases. Its experts think a second of the three forms of poliovirus has been eliminated after mass vaccination campaigns. Wild poliovirus type 3 has not been found for more than two years, while type 2 was eradicated in 1999. Type 1 polio remains endemic in three countries: Pakistan, Afghanistan and Nigeria.

Tsunami alert sparks panic in Indonesia

AFP, Kota Ternate

A powerful 7.1-magnitude earthquake rocked the Maluku Islands in eastern Indonesia yesterday, sparking a tsunami warning and causing panicked people to flee their homes. Small waves generated by the undersea quake were detected in several parts of the sprawling archipelago, local authorities said, although there were no reports of casualties or major damage and the tsunami warningwas lifted after a short while.

Algerian president **Bouteflika 'hospitalised**

AFP, Grenoble

Algerian President Abdelaziz Bouteflika, 77, who has been plagued by ill health since suffering a "mini-stroke" last year, has again been hospitalised in France. The clinic in the southern city of Grenoble did not offer a reason for the hospitalisation.

Riversimple: A car that emits only water vapour
