

Work Hard

The eSports scene takes me back to 2009 where my own struggles began regarding what I was passionate about. Everyone laughed at the idea of me running a website which kinda had the opposite effect since I founded a humour website, so little old naive me took it as encouragement. Blindly following my passion while respecting others is what gave me this opportunity to write the editorial and reach out to the thousands out there who are nurturing the dream of being an eSports athlete. This one's for you. Make Bangladesh proud.

P.S: Don't report anyone for being a noob. Your mother didn't report you for being a noob when you were born.

APP REVIEW

The Best Android Reddit Experience

RUMMAN R KALAM

Bacon Reader, Reddit is Fun, Flow for Reddit, Reddit News or even Swipe for Reddit, I've been through them all. But only one app stood out for me and it's not in the aforementioned list.

Sync for Reddit, in my opinion, is the most complete Reddit experience one can get on an Android OS. Whether it's a tab or a phone, Sync felt the most intuitive of all the apps I tried out. Having support for AMOLED screens, it means that the background can be pitch black, which is a huge battery saver for phones like Walton X1/X3 or the Samsung S/Note series.

The app has the usual Reddit Enhancement Suite (RES) feature available for the user like saving links, comments and tagging. If you are using Reddit without RES, I urge you to get it. Your redditing experience will completely change.

One standout feature of the app is that it supports Gfycat and Imgur Gifv straight out of the box. This means you won't have to open a separate browser or the app's embedded browser to view Gfycat links which are prominent in the "special" subreddits and /r/soccer.

Try it out.
