Price: Tk. 3,500/- (10% discount available for Eid)

TECH HAPPENING

Grameenphone shares '#theirkhushi' with customers

Grameenphone Ltd. has launched a special '#theirkhushi' campaign to share the spirit of the holy Ramadan and happiness of Eid-ul-fitr with people across the country. Under this campaign, Grameenphone will collect used Internet-enabled handsets from valued customers and other entities and donate them among underprivileged people of the country through BRAC, the largest developmental organization in the world. A MoU has been signed today between the organizations in this regard

at GPHouse. Through this campaign customers are encouraged to donate their old or unused internet enabled handsets to all Grameenphone Centers across the country. Grameenphone will refurbish the devices and hand them over to development partner BRAC. Subsequently, the mobile phones will be gifted to young, aspiring entrepreneurs or community role models with one year free internet subscription. The campaign will be initiated with 500 handsets donated by Grameenphone.

Besides iPhone 6 Plus cost is BDT 85,200 (16GB) and BDT 96,500 for 64 GB

KASPERSKY SECURITY UPDATE

How Kaspersky Internet Security protects from ransomware

Ransomware is a kind of malware that steals users' files and exacts a ransom from its victims. The most effective approach is to encrypt the files and offer decryption keys for ransom — hence why this malicious programming is also referred to as cryptoware. This is a huge problem nowadays, with new examples of ransomware circulating on a regular basis. There's already a great number of them out there: CryptoLocker, TorrentLocker, PrisonLocker, Cryptowall, CoinVault, TeslaCrypt, CTB-Locker and so on and so forth.

There's a good reason why this type of malware is so popular among cybercriminals: it is a very profitable business with a clear action plan and direct monetization. Criminals simply infect a person's computer, block their files, contact them for ransom, and as long as the victim values their files, receive payment.

Criminals even offer customer support to help their victims make

payments easily. Not to mention that extortionists work hard on 'distribution solutions' for their malware — spam and phishing campaigns, huge botnets, etc.

The most effective option for ransomware protection is to regularly back up all of your important files. If you have nothing to lose, criminals can't force you to pay their ransom.

Kaspersky Internet Security offers another option that we refer to as 'real-time backup when you need it'. The core idea is straightforward: if Kaspersky Internet Security detects some strange modification of your files, it immediately creates fresh copies of these files to prevent them from being 'stolen'. Then it examines the software that attempted to modify your files. If it is really suspicious, then our product blocks it.

If you are already a Kaspersky product user, all you need to do is to make sure your Kaspersky Internet Security is properly configured.
