

to purchase a pair would be to order from an international online store and get it shipped over (the process is quite tedious though).

If you choose to regularly wear loafers for long hours, it is recommended to invest in a few pairs of low-cut loafer-liners, which are basically socks that do not show above your ankle and thus help you achieve a sockless look while keeping your feet clean and dry in unfavourable weather conditions. Loafer-liners are available in most shoe stores and cost between BDT 300 to BDT 600 a pair.

Loafers boast many advantages, but also have a few potential downsides to them, in comparison with sandals and flip-flops. The most significant drawback of all is regular maintenance; it's easy to maintain loafers, but it's also necessary. Nothing looks worse than a pair of loafers covered in sun-baked mud. Loafers, like any other fully enclosed shoes, are also prone to becoming smelly if worn on clammy feet and for long hours. Thus, it is important to wear loafers on clean, dry feet and, wear loafer-liners to avoid any kind of stinky fuss.

People say that the first thing they notice about a person is often his/her shoes. Depending on what clothes you're wearing, your shoes can be the make or break factor. A t-shirt with a pair of jeans and flip-flops is one thing; the same set of clothes with a pair of loafers can create an entirely different impression. Hence, to add some dimension to your look and catch up with this incoming trend, add a pair of loafers to your wardrobe today!
