TOP NINE BATMAN GADGETS

We have all been awestruck by Batman's hi-tech gizmos at some point. While we'd like to own his entire collection, we couldn't possibly fit all of them in here. So, here are the best gadgets Batman has been seen using in comics and movies.

By ABHIK HASNAIN

BATARANG

One of the most used non-lethal, multi-functional weapons used in the Batman franchise, the Batarang gets its name by combining bat and boomerang. There are several versions of Batarang including one that's computer controlled. While it appears as an explosive majority of the cases, Batman also uses it like darts to subdue distant enemies.

GRAPPLING GUN

Batman's constant companion, the grappling gun is a rather cool way to get around the city. Helping Bats to get out of the trickiest situations, this steals the spotlight in almost all the issues. This isn't unheard of outside Batman but none of the others has a giant bat behind the trigger.

BATMOBILE

I don't know about you guys but I loved the Batmobile in movies more than the one in the comics. Nicknamed The Tumbler, it's been used for pursuing enemies, crowd control, vehicular warfare, transporting prisoners and as a portable crime lab. Often unmanned and remote controlled, it seems to come out of nowhere just at the right time for Batman to jump in.

The new stuff Apple has to offer

Apple events are magical for every tech enthusiast out there and luckily Apple has never let its fan base down. The latest Apple event had a lot of really interesting offerings as well. The biggest of the bunch was the new iPhone SE. A 4 inch iPhone with internals from the iPhone 6s and a 12 megapixel camera wrapped in a shell very similar to that of the iPhone 5s the iPhone SE however doesn't have 3d touch. The 16 GB version comes at \$399 and the more spacious 64 GB version comes at \$499. Apple also announced a smaller 9.7 inch iPad pro with all the original iPad pro features. It also has its own smaller version of the keyboard case and all the colour options available for the bigger iPad. Both the iPhone and the iPad can be preordered from Thursday, March 24th, and units will begin shipping on the 31st of March with the 32 GB and 128 GB version of the iPad being available at \$99 749 and \$899\$ respectively. The Apple event also had announcements in the software front. A new version of iOS 9.3 was announced which is not a new OS but has bug fixes and cool new features like the night shift which changes the brightness of the display according to the time of day. Apple also announced a freely downloadable TVOS 9.2 which allows you to use Siri. Apple also addressed the legal lawsuit with the encryption fiasco. Apple has sided with the customers and has assured to safeguard their privacy. The Apple event also gave an update about its goal of reaching 100% renewable energy for production purposes which currently stands at an impressive 93%. Apple launched CareKit following up on its successful ResearchKit which supplies patients with virtual doctors.

BATCOMPUTER

The most famous supercomputer in the fictional world, the Batcomputer has access to all feeds, all network across the world, that helps Bruce Wayne track, locate and find out information about anyone. It looks very futuristic with multiple monitors displaying all sorts of complex data. Recent versions have also been used to project holograms of people to communicate.

MEMORY CAPE

It looks like a regular superhero cape but it can do so much more. It can be used to protect himself from bullets, shrapnel and fire; pass an electric charge through it and it hardens into a glider in the form of a wing. The edges were made razor sharp to use it against attackers.

BAT ARMOR

The Bat Armor is famous from the issue, The Dark Knight Returns where Batman fights Superman. Made with love to do a lot of damage, the BvS movie that came out a few days ago used that storyline to show off this amazing exosuit. This enhances Batman so much that he almost beats a godlike Superman to death.

GAUNTLETS

Yes, it adds to the awesomeness of the entire Batsuit but it can be deadly with the retractable razor like fins. In The Dark Knight, Batman projects these at the Joker to get out of his grip. In a few scenes, he's seen using a remote on the gauntlets.

UTILITY BELT

The weirdest things have been known to be stuffed in that built of his. From gas pellets to tranquilizer guns to freeze grenades, how it all fits inside that belt is a mystery till now. But the Utility Belt is a major part of Batman fights and things obviously would have been a bit dull without it. No matter what happens, you can always expect something to come out of that belt that'll bring things under control or less chaotic (or more).

THE BAT

Not that Batman's street cred depends on his gadgets, but having a plane like this certainly gives a major boost. Also referred to as the Batplane, the Bat is equipped with advanced weaponry and can perform amazing feats on air.

JUST IN

Huawei launches GR3 for Bangladeshi market

Huawei has launched the GR3 in the Bangladeshi market. It features include a full metallic unibody, a 5-inch IPS display, 13 MP rear and 5 MP front camera.
