

International Ape Festival

Organised by Chimps27, the International Ape Festival 2016 took place on November 19. Apes from all over the world congregated to celebrate the wonders of hominids. Many of the great apes, like the orangutans, eastern gorillas, the band Gorillaz, bonobos, and chimpanzees among others. The entire event, being managed by the chimps in their homeland, had an added focus on their own kind to the point where the endangered species like the eastern gorillas could not even get their allotted time to perform. Shamefully, the entire chimpanzee population watched their kind be embarrassed by their horrible performers getting more stage time than the hard working senior apes from all over the world. Pls stop doing this, Chimps27.

THIS WEEK'S HORRORSCOPE

ARIES

Sticky notes can make fun outfits. Just make 'em extra sticky.

TAURUS

Don't bump me with your head.

GEMINI

If you are mankind's angel, who is the devil?

CANCER

Pepe lives. You know it's true.

LEO

Your love life is like my Ferrari; I don't have a Ferrari.

VIRGO

Do you suffer from vertigo?

LIBRA

Your odour is like the pits of Dhaka's sewers.

SCORPIO

Even famished pirates look better than you.

SAGITTARIUS

Keep your girlfriend clean. Get some hand sanitizer.

CAPRICORN

I bet you're the guy who buys Detos instead of Cheetos.

AQUARIUS

Special snowflakes melt away. Just like your dreams.

PISCES

Don't go near the dogs. You'll scare them.

APP REVIEW

SOLOLEARN

Your Ticket to Coding

SALMA MOHAMMAD ALI

Platforms: Android, iOS and Windows
Size: 5.42 MB

Whether you want to learn coding just for fun or to build the next hit app or your own website, installing SoloLearn is a good first step. SoloLearn is more than just an app, it's a community of coders (over "10,000,000 learners") which probably explains why it's so effective and resourceful.

SoloLearn covers the languages – HTML, CSS, JavaScript, PHP, C++, Python, Java, Swift and more. Programming concepts are introduced through short texts or instructions and followed by quizzes. The level starts from Basic and goes on to Intermediary and Advanced.

Here's the fun part – you don't only learn coding but can also write your own codes or make changes to existing

ones. You can take advantage of the Q&A discussions to improve your concept of coding, clear confusions through the comment sections with the help of fellow coders from around the world, or engage in short coding challenges with others. The "Code Playground" is where you can mess around with codes and get creative – like make a Rock Paper Scissors game using Python, where the result is randomly generated after your input of rock/paper/scissors. You can then experiment with more complex codes as you get better.

Thankfully, it's absolutely free and devoid of annoying ads. There's one minor setback – you have to go to YouTube to view their video tutorials so a decent internet connection is a must, but you can download text tutorials to learn offline. That and their interactive teaching process make SoloLearn definitely worth an install.
