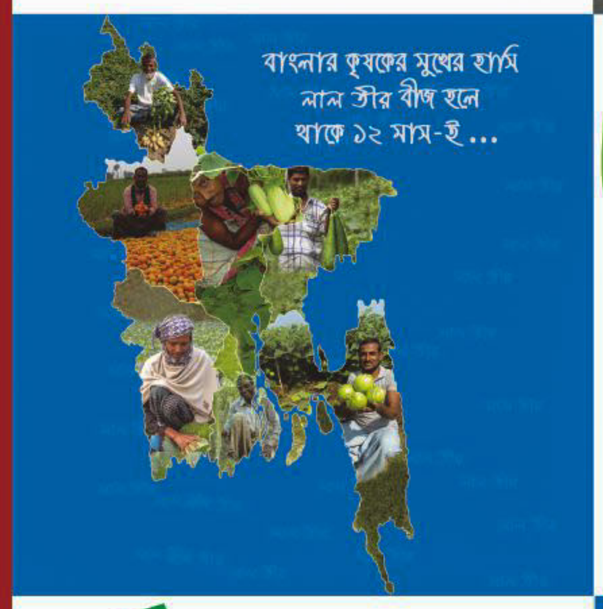
Lal Teer Seeds Ltd. recognizes the fact that women contribute more than 50% of the labour force in the production of food. It is important to not only recognize the contribution women have towards the food security of Bangladesh, but it is also important to acknowledge the positive impact women can have in nutritional development of the nation. We have set our mission to empower women in the field of agriculture and started our journey by directly engaging women as contract farmers for seed production. Today we have trained and equipped more than 200,000 females to become "info ladies" in the rural areas who earn a living by selling seeds and advice on better farming practices. Women are no longer just volunteer household helpers. Today they are empowered farmers and entrepreneurs.

Empowering Women in Agriculture...



I am Khorshed Mia from Fenchuganj. I produced 3000 pieces of bottle gourd on a 7 bigha land which gave me Tk. 87,000 profit. Thank you Lal Teer...

I am Mohammed Idris and I earned Tk. 6 lacs in 3 months by producing Lal Teer Egg Plant in a a valley of Sitakundu, Chittagong. Thank you...

NSL

Multimode Group is committed to increasing the production yields of the Bangladeshi farmers thereby supporting their economic growth. Primarily we engaged over 11,000 farmers and trained them to produce hybrid vegetable seeds. These farmers can now collectively produce over 10,000 tons of seeds which makes the nation more self-sufficient in agriculture. Alongside we have assisted the farmers through crop protection activities where we ensure quality products and appropriate usage against pests and tropical diseases.

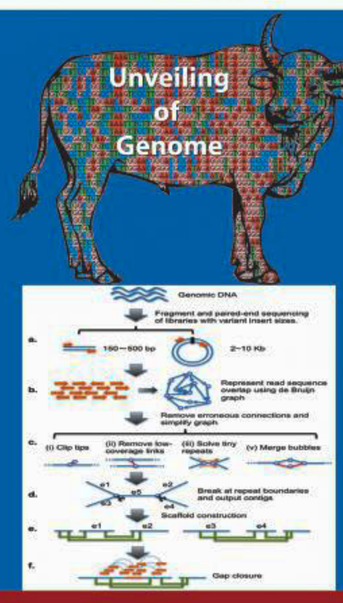
Bangladesh has the 4th largest bovine population in the world but also one of the lowest productions of milk and meat. This facility was founded with the vision of creating a sustainable and productive livestock rearing industry in Bangladesh. With the motto of "innovating livelihoods" we started our journey by sequencing the DNA of the Riverine Buffalo. This is the first sequencing of its kind and recognizes Bangladesh as the holder of all such patents and future research innovations. We intend to develop breeds which are suitable for the local climates and rearing technologies.



Cattle

✓ First time in Bangladesh	:	Beef breed development by Lal Teer
✓ Birth weight	:	31 kg. for F_2 Lal Teer cattle
✓ Milk production	:	12.5 Lt./day by F_1 Holstein cattle
