

Celebrating change

Change is a thing that splinters opinions. Some want it, some don't. Some want it now, while some are willing to wait for it. Some people want to bring about change themselves, and some sit there complaining that it's taking too long. And this is where the great divide is. Change happens because someone out there is actively working to make it happen, and like with everything else in this world, change is never handed out simply because someone wants it. Entitlement is a disease that plagues our societies, and when it comes to the possibility of bringing about change, entitlement kills it. If entitlement breaches the ideals of a group of people, it can be said with a reasonable degree of certainty that their progress will be halted.

It's easy to complain, and it's redundant to complain about complaining. It takes courage to initiate change and make contributions that have a lasting impact. The least one can do sitting in their armchair is celebrate the courage that brings about good things, and make way for the braver kind among our species.

APP REVIEW

COUNTING STARS ON YOUR PHONE

ASIF AYON

Platforms: Android, iOS, Windows

If you've ever wanted to view stars, constellations, and planets of the night sky without ever having to go outside then look no further than Star Chart. It's a location (GPS) based application which helps to view all that is available in space. So from whichever viewing angle you see your phone from, the application will automatically show the stars or planets in that direction.

The starry sky background moves with respect to whichever direction you move your phone allowing you to

view space from all angles. This in and of itself would have been a neat application to have, but Star Chart also allows you to view constellations, showing the recognisable patterns as you get close to them on the map. The application also comes with details regarding the stars and planets you pinpoint and how far you are from them. Not only that, but you can also zoom into planets and observe them in realistic details up close.

It's a neatly made application, with a lot of attention to detail which makes it a fun pastime. Not to mention it might even manage to pique one's curiosity about what's lying out there in the vastness of space.

THIS WEEK'S HORRORSCOPE

ARIES

Hey prude, be a little rad. Take a bad song, and play it louder.

TAURUS

Octobers come along every year, but does October Revolution?

GEMINI

Wet roads and wet skies. Waiter, did you forget the sauce that comes with my fries?

CANCER

Yellow is a colour that we can never agree on.

LEO

Oil is found in the depths of the earth and disgusting conversations.

VIRGO

Unseen wonders await you friend, you just need to fall asleep.

LIBRA

Free the man from the nets of mosquitoes, for we shall not be bound.

SCORPIO

Ever wonder why?

SAGITTARIUS

Empires are built and broken over territory, economies, and love.

CAPRICORN

Lately I've been feeling this need, this need to take a chance, to dance.

AQUARIUS

Maybe, you're gonna be the one that shaves me.

PISCES

Elasticity can be gained with a lack of spine.
