RICHEST SEVEN WOMEN IN TECH

In a male dominated tech industry, only a few women were able to break the glass ceiling. We here listed the richest seven self-made women billionaires in tech industry. Interestingly, three of them are from Asia, three from USA and one from Europe. Most of them had an inspiring rags to riches stories. Here's everything you need to know about them:

Denise Coates
Founder and Joint CEO
Bet365
Net Worth: \$4.6 b
Country: UK
British billionaire businesswoman and founder-CEO of online gambling company Bet365, Denise Coates is the richest women in tech in Europe. Last year her website hosted a record £47 billion bets of which they made revenue of £525 millions.

Lam Wai Ying
Chairman
Biel Crystal Manufactory
Net Worth: \$5.2 b
Country: China
Lam isn't much known in the media. She and her spouse jointly own Biel Crystal, one of the leading smartphone touchscreen suppliers of Apple and employ 100,000 workers. After scouring the internet we could only find one or two photo of her.

Meg Whitman
CEO
NewTV
Net worth: \$3.2 b
Country: United States
Best known as the queen of eBay, Meg Whitman drove the

sales of eBay from \$5.7 Billion to \$ 8 Billion in just ten years. She later joined as the CEO of HP and oversaw the split into HP Inc. and Hewlett Packard Enterprise. Now she is working for a media startup- NewTV.

Wang Laichun
Chairman
Luxshare Precision Industry
Net Worth: \$2.6 b
Country: China
From the assembly line workers to the global supplier worth billions, Wang Laichun and Zhou Qunfei (the first on our list) both have quite similarities. Both were immigrants, both started at factory floors and both built their empires from scratch.

Zhou Qunfei
Founder and CEO
Lens Technology
net Worth: \$11.4 b
Country: Taiwan
Zhou Qunfei is the richest women in tech in the world

now. According to various news media, her net worth varies from \$ 7.4 to \$11.6 Billion. This self-made billionaire is the founder and CEO of Lens Technology, the largest manufacturer of high-end touch panels.

Judith R. Faulkner
Founder-CEO
Epic Systems
Net worth: \$3.5 b
Country: United States
Epic is the American's top medical record keeping software and Judith is the founder and CEO of the company. Starting her business from a basement in 1979, Epic now supports 230 million patients globally.

Sheryl Sandberg
COO
Facebook
Net worth: \$1.6 b
Country: United States
Sheryl isn't the richest in our list, but definitely the most renowned and influential. This Harvard MBA is known for her role in Facebook. What people don't is prior to joining Facebook, she worked as the VP of Online Sales and Operations at Google.

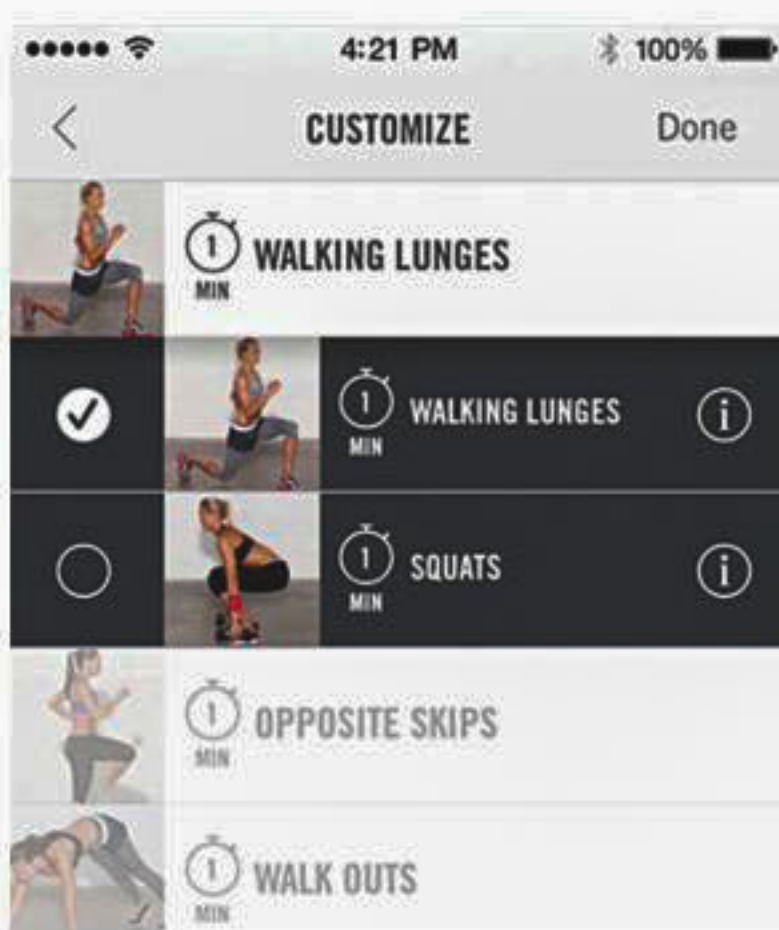

APPS ON THE FLOOR

Gyms hate these 3 fitness apps

FIND OUT WHY

The idea of going to a gym might come easily to most, but the act of actually going through the motions of the institution is anything but. However, there are a plethora of Fitness Apps available for smartphones these days with the help of which anyone can look good while flexing in front of a mirror. These apps are in no way a substitute for a proper gym or a trainer. But for those who can't find the time to go to a gym, these 3 apps are a good place to start.

NIKE TRAINING CLUB

Platform: Android and iOS
TYPE: Free

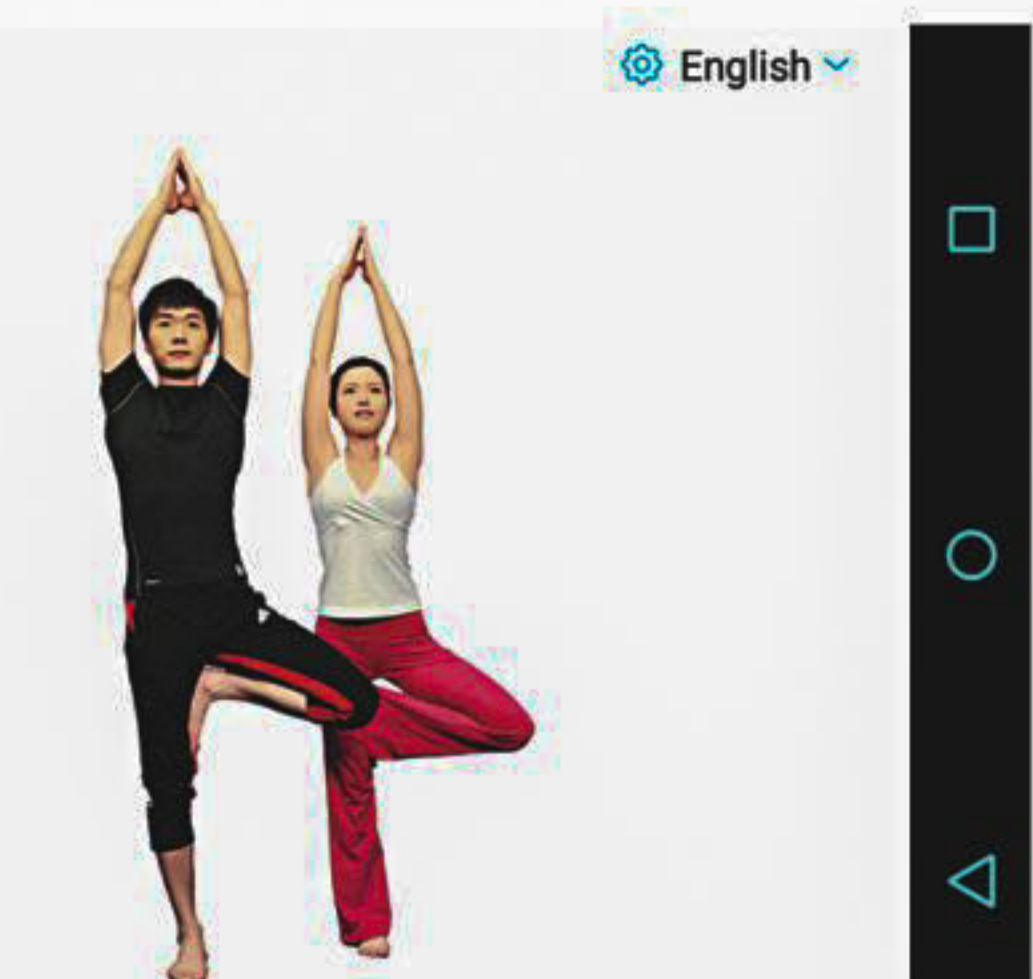

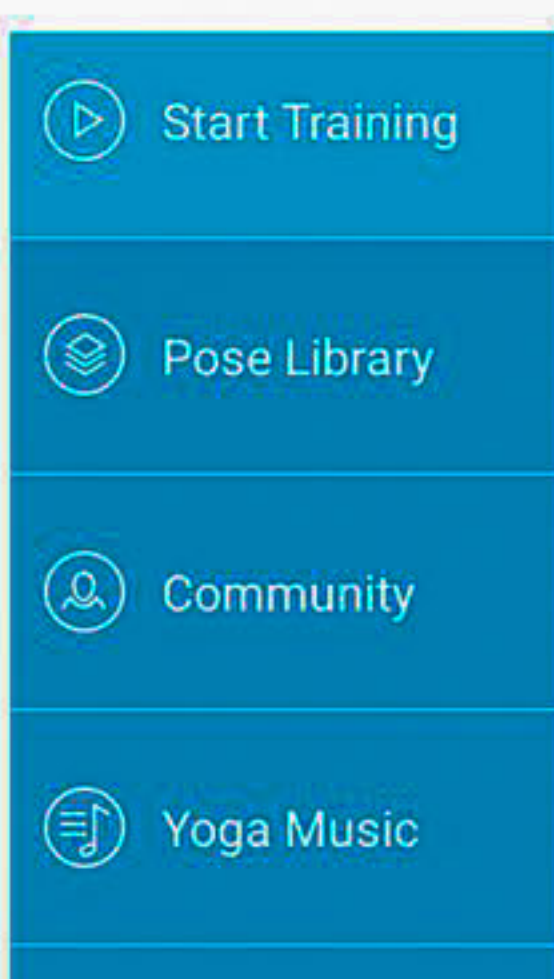

With a sleek and stylish design, Nike Training Club is a premium feeling app. It offers more than a 100 workouts encompassing endurance, mobility and strength workouts. There's also a separate section for yoga practices. It supports Chromecast mirroring and AppleTV and it comes with a host of celebrity "motivational speakers" to keep you focused throughout your workout. Nike Training Club comes packed with 15 minutes and even longer session workout routines.

DAILY YOGA

PLATFORM: Android and iOS
TYPE: Free with in-app purchases

The end all be all yoga app, Daily Yoga focuses solely on the practices pertaining to yoga. The app comes packed with HD

videos of the different postures and positions and is a good introduction to the art of yoga. There are around 50 yoga classes available on the app and all of them are under 30 minutes. Each session is then divided according to the body part you want to most focus on.

WORKOUT TRAINER

PLATFORM: Android and iOS
TYPE: Free, Pro Version \$6.99

With over a 1000 workouts ranging in length from 5 to 15 minutes, Workout Trainer is basically Nike Training Club but on steroids. Apart from the preset standard workouts, you can also create custom routines or even follow community routines. The pro version comes with advertisement free HD workout videos and more routines to test your might too. Don't go for the premium version directly. First try it out. If you find worth paying for only them do the purchase.

ASIF AYON

To buy or not to buy an iPhone X.... now

Planning to buy an iPhone X now? Probably it's the worst time for buying this phone. Apple, last year, launched three phones including the legendary-thousand-dollar notch-popping iPhone X. The phone discarded the traditional home button and replaced the fingerprint scanner with an AI-powered Face ID scanner. Rest of the two phones: iPhone 8 and iPhone 8 Plus which were nothing but an incremental update of the even pre This year, all three phones are set to use these features.

Rumours have it, Apple is going to unveil three smartphones and some other devices this September as part of its annual roundup of new flagship phones. Amongst the smartphones, one of them is going to be a larger version of the iPhone X with a 6.5-inch screen. The other two might be a smaller with lesser processing power 6.1-inch LCD display.

As the dummy models from reliable sources suggest, the flagship device of this year will be having a whopping 6.5 inches. Not to worry, the phone will go no-bezel this time with screen real estate stretching edge to edge. But the best news so far is the 6.5-inch model may come with dual SIM cards support. For most Bangladeshi users, that would be awesome as we wouldn't require carrying two different phones

anymore. Let's earnestly hope that Apple to sport these features. Not only that, the new smartphones are expected to pack a bigger battery. The 6.5-inch model will be having a 3,400 mAh battery whereas the smaller ones will be having at least 2,700+ mAh battery.

Another rumour that has been floating around is all the phones are going to have USB-C charging port. This is Apple's bold move to shift all the laptops and portable devices to USB-C. No more carrying two charger cables for your Android and Apple phones.

Will Apple be able to stun the crowd once again? That's a question we will be getting answered after the launching event in September. Till then, keep praying that the price drop on the existing models are substantial enough for you to save some bucks.
