

Life made easy: Singer's kitchen appliances

Worn out by artificially flavoured drink mixes or regular 'Lebur Shorbot' to break the fast? Are these liquids failing miserably in brawling the blows of the scorching heat and most importantly failing in fulfilling your appetite?

Craving for an add-on of liquid with the regular iftar items, which would assist in not only quenching the thirst, but also in keeping your body cool?

During this Ramadan, the temperatures begun to soar high leaving everyone feeling fatigued, sweaty and messed up. Staying hydrated arose as the most important factor to keep going in this sweltering heat and maintaining sound health. Your body tends to lose water at a faster pace due to excessive sweating.

Then what's better than bringing absolute lip-smacking juices with sprinkled ice cubes to your rescue? A chilled glass of juice can instantly cheer you up helping you counter dehydration and dullness. The mild sweetness and fresh taste make it just the perfect drink to keep summer blues at bay. Moreover, it's not only refreshing but also filling.

Moreover, it is imperative to have juices, which helps to replenish some of the fluids lost during the day. Fruits are rich sources of several biologically active components that contribute to general health and decrease the risk of chronic diseases such as cardiovascular disease.

But surprise, surprise! Extracting juice from solid fruits manually is extremely tiresome and time-consuming. After a long day of fasting in Ramadan, coming home and conducting this hectic job would be like putting the final nail in the coffin of your

reserved energy.

On the other hand, buying juices from stores might be utterly expensive. In addition, if you consider the amount of money spent in ready-made juice, its utilisation lacks both in quantity and quality compared to the home-made one.

Therefore, let us take a moment and express our gratitude to the modern technology for providing us with juice-maker/blender, which would get rid of our agony and save us a lot of time and energy.

Singer offers you a blender to make fresh and healthy juice in seconds. With an interchangeable blender and juicer feature making it your one stop solution! It provides you with an affordable collection of blenders with price ranging from Tk 2000 to Tk 7000.

The juicer attachments have a large inlet to minimise the need for chopping fruits and vegetables; it also features a separate outlet for the juice and the pulp.

As we welcome summer, let us refresh and replenish our body with some of the

best summer juices in order to beat the heat.

So, every time you feel dehydrated, load up on some fruits, put it in the blender and switch it on and you are good to go. You might add ice cubes and mint leaves to enhance the taste even further.

Besides, Singer brings you rice cooker, grinder, and microwave oven, in addition, to let you walk the walk with even more efficiency in terms of time and energy. What's more interesting is it's reasonable price range, which could easily fit into your budget.

Feeling drowsy after waking up for sehri? Fantasising that if some supernatural power could prepare the food arrangements and get you back to the bed and just let you pass out? Then look no further.

The Singer rice cookers are intelligently designed, emancipating you from the agonies of conventional cooking techniques.

Just add rice, measure water, press start and walk away. The machine brings the mixture to a boil, reduces the heat for a prolonged simmer, and then switches to a very low setting to keep the cooked rice at serving temperature.

The Singer microwave could be another addition in the kitchen, retaining the quality and taste of sandwiches, burgers and other menu items. Most importantly, assist you in saving your time and energy immensely.
