

# WTO to back US tariffs over Airbus subsidies

REUTERS, Brussels/London

The World Trade Organization is poised on Wednesday to open the door to hefty US tariffs on European goods over illegal subsidies for Airbus, pushing a 15-year-old row over support for plane giants to the center of fraught global trade relations.

The Geneva body said it would publish at 4 p.m. local time (1400 GMT) its decision on a US request to impose up to \$11.2 billion in tariffs on European Union goods, but people close to the case expect WTO arbiters to reduce that by about a third.

The WTO has found that both Europe's Airbus and its US rival Boeing received billions of dollars of illegal subsidies in a pair of cases dating back to 2004. Both cases are expected to lead to tariffs, deepening transatlantic trade tensions.

A three-person WTO arbitration tribunal is expected to announce that the United States suffered harm equivalent to roughly \$7.5 billion a year from discounted European government loans for the Airbus A350 and A380 passenger jets - a decision that would allow Washington to hit goods worth the same amount.

The focus of nervous global financial markets will then shift to Washington where the US Trade Representative is expected to move quickly to narrow down a preliminary list of goods in line for tariffs. The agency's provisional list of products that are eligible to be targeted covers goods with an annual trade value

of \$25 billion and ranges from Airbus jets themselves to helicopters, wine, handbags and cheese.

Before any tariffs are imposed, the WTO's Dispute Settlement Body must formally adopt the arbiters' report in a process expected to take between 10 days and 4 weeks.

Its next scheduled meeting is on Oct. 28, but Washington could request a special meeting 10 days after the arbiters' report is published, suggesting an earliest possible final nod on Oct. 12.

The WTO's decision on EU retaliation rights related to Boeing subsidies is expected early in 2020.

On Tuesday, the head of Irish budget

airlines group Ryanair urged the United States and EU to pull back from the brink of a tariff war and said neither side's aviation industry would survive a long dispute.

Importers led by US airlines that buy Airbus jets have urged Washington to be selective when choosing industries to hit in order to avoid causing collateral damage to the US economy.

Signs that the record corporate trade dispute involving Airbus and Boeing - the largest case ever handled by the WTO - is reaching a climax after years of arcane headlines and thousands of pages of rulings have weighed on European shares.

# Tesla's China production to start, eyes on mass production timing

REUTERS, Shanghai

Tesla Inc's China factory aims to start production this month but it is unclear when it will meet year-end production targets due to uncertainties around orders, labor and suppliers, sources with knowledge of the matter said.

The US electric vehicle maker aims to produce at least 1,000 Model 3s a week from the new factory by the end of this year, the centerpiece of its ambitions to boost sales in the world's biggest auto market and avoid higher import tariffs imposed on US cars.

The plant's mass production schedule is crucial for Tesla's hopes of reaching its total production rate at an annualized 500,000 vehicles by the end of this year. The \$2 billion factory - Tesla's first car manufacturing site overseas - gained key government approvals last month and is on schedule to start production in October, the sources said.

"We aim to start some production in October, but the actual production volume depends on many factors

including car orders we received, performance of newly hired workers, supply chain and so on," a Tesla source told Reuters.

"It's unclear when we can reach the 1,000-2,000 units per week target," the person said, declining to be named as he was not allowed to speak to media.

Tesla did not respond to requests for comment.

The factory is kicking into gear amid the US-China trade war and weakness in China's auto market. Sales of new energy vehicles contracted for a second month in a row in August, and are likely to grow at a slower pace this year to 1.5 million vehicles, down from a previous forecast of 1.6 million, according to an industry association.

Tesla has fared better, with China sales rising 98% in the first seven months of this year thanks to strong demand for Model 3, according to research firm LMC Automotive.

Tesla has embarked on a new phase of construction work at the factory in a sign of confidence in its China strategy.

The new facilities will include battery pack production units, according to a company source and documents.

The so-called 1.5-phase works, which have not previously been reported, include a production workshop and an energy center, construction documents showed. Construction is scheduled for completion by around the end of this year. Tesla also is looking to hire battery-related production engineers in Shanghai, according to its job advertisements.

The plant, which Tesla says will be simplified and more cost-effective than its existing Model 3 line, will have 500,000 units of annual capacity when the second phase is completed, doubling from initial phase capacity of 250,000 vehicles. The factory, China's first fully foreign-owned car plant, is a reflection of Beijing's broader shift to open up its car market.

Shanghai authorities have offered assistance to speed up construction, and China excluded Tesla models from a 10% car purchase tax on Aug 30.
