

CHIT-CHAT

BOBBY

Can you describe yourself in three words?
I'm trustworthy, reliable and a loyal friend.

What is your favourite childhood memory?
My favourite memories are with my father. I will never forget how proud he was when I got through a very difficult admission process in school.

If you could have any superpower, what would you choose?

I would want to be invisible as I would like to know what people think of me in my absence. Moreover, I would be able to help people anonymously.

What are the first three items in your bucket list?

Firstly, I would love to go on a world tour. Secondly, I want to spend time with my sister's children who live abroad. Finally, I want to get rid of my acrophobia.

If you could work with any international artist, dead or alive, who would you choose?

As an actor, from the top of my head, I would have to say Tom Cruise and Shabana Azmi. From the newer faces in the industry, I have to choose Prabhash.

What is your favourite place to visit?

Australia is undoubtedly one of my favourite places to go to.

What is your favourite food?
Chatpati and ice-cream.

Who was your first celebrity crush?
Shahrukh Khan.

What is your favourite movie of all time?

It's hard to pick one, but *Dipu Number Two*, *Original Sin* and *Masoom* are a few of my favourites.

If you could be any animal, what would you be?

I would want to be a lion as they are a symbol of leadership, which is a quality I aspire to have.

What would you do if you won the lottery?

The first thing I would do is open an orphanage in my father's name.

What is the first thing you do after waking up?

I check my phone.

PEEPING TOM

HERE WE GO AGAIN

Are you failing physics class? Do you want quick grades without hours of hard work and the resulting self-destructive tendencies? If so, you're at the right place. Now, we know what you're thinking, and no, jeez, not in that way. Abandon your social media scrolling and start bingeing *Rick and Morty*. 'What?' you may ask. Yes, you read it right. 'How?' you may ask. Well, let's get onto the specifics. This show provides a great understanding of theoretical physics, along with showing themes of Heisenberg's Uncertainty Principle and Many Worlds Theory, among many other hard to digest themes. If you're observant, you might notice the philosophical elements of Nietzsche and Kant, nihilism, existentialism and absurdism, and see your grades soaring in other subjects as well. Basically, increase your IQ points and general knowledge at the comfort of your own couch, all the while going on crazy intergalactic adventures with an alcoholic, dimension-hopping scientist and his naïve young grandson. Don't worry if you find this show too superior for your common brains; it has enough humour, clever quips, parodies, satire and terrible puns to keep it watchable. Get what we mean? Open *Netflix* now and binge-watch the thirty-one episodes available. You'll thank us later. Another season is on the way. Cancel all your plans for November 10, 2019. You'll be grateful.
