|  | assignment  | variables, that provides decision-makers with the information necessary to prioritize and select appropriate medical devices at national, regional or hospital level. No need assessment regarding medical devices was previously done in Bangladesh. However, the existing gap can be identified by collecting baseline information and comparing it to a desired standard. Determining how to best use the resources available to fill that gap will lead to a prioritization of activities that can eventually lead to a more efficient provision of health services and better quality of care. The general approach in performing this need assessment is to examine what is available at the upazila and below level facilities in Bangladesh, and to compare it with what should be available, considering the particular demand of the population of catchment area and to find out the unnecessary part of expenditure as well as the cost recovery options. |  |  |  |
| 14.  | Experience, resource and delivery capacity required       | To be selected, the organization must have the following:  Familiarity with the health, nutrition and population sector program.  Extensive expertise on economic evaluation related exercises.  Proven expertise in cost analysis of health sectors conducting national level surveys.  Proven ability to manage and conduct large data set.  Expertise in use of STATA/SPSS statistical software for data analysis.   |  |  |  |
