

Shohoz adds new vertical: Shohoz Learn

Shohoz, the ticketing, food-delivery, ride-sharing, utility-vehicle hiring platform, has yet added another vertical: an ed-tech platform called 'Shohoz Learn'. Launched on June 10, this platform houses 100 kids' eBooks with an audio reader and assessment tools in partnership with the global ed-tech platform MommyDaddyMe (MDM). According to a recently shared press release, Shohoz has plans to increase the diversity and volume of quality EdTech tools through the introduction of classrooms, dashboards, discussion boards, educational video content, podcasts and many more.

Anyone can enrol to Shohoz Learn through their multiple subscription plans by downloading the app on Google Play Store or Apple's App Store.

PRICE: BDT 850 for 6 months and BDT 1250 for 1 year.

Tesla Model S Plaid unveiled

Tesla finally staged its long-awaited, and previously rescheduled, "delivery event" for the ultra-fast Model S Plaid at its Fremont, California facility. CEO Elon Musk said at the ceremony that the electric vehicle company will start with 25 deliveries on Friday evening and will grow to several hundred cars per week and a thousand cars per week in the next quarter.

There were no major surprises in the latest Model S, which includes a new battery pack design, an upgraded heat pump, carbon overwrapped rotors on the motors, and a new record for drag coefficient

of 0.208, which Musk stressed as a possible dig at Lucid Motors. The Lucid Air boasts a drag coefficient of 0.21 and is expected to go into production later this year.

The four-door electric sedan accelerates from 0 to 60 mph in 1.99 seconds, breaking the two-second barrier that no production automobile has ever managed to breach, according to Musk. According to Musk and the company's website, it produces 1,020 horsepower, has a max speed of 200 miles per hour (with the correct tires), and can complete a quarter mile in 9.23 seconds.

EDITOR'S NOTE

It's all relative

We have designed this issue with one thing in mind: career! In the pandemic, many of our readers wanted to know how to get back to the workforce. Our feature story is about how to overcome the gut-wrenching feeling of reapplying to a job; and the dos and don'ts. We also talk about how you can maintain etiquette in a professional atmosphere. For those who want to take up a notch, we have an article on the basics of data analytics and where you can get started. If your thought process gets fumbled, feel free to unwind with Spotify. Don't know the cool features that Spotify has? Look no further, we have an article on tips and tricks to make the most out of Spotify.

Lastly, do let us know what more you want to see on Toggle next?

Netflix releasing two Far Cry animated shows

Ubisoft and Netflix released a first look at a new Far Cry series on Friday, as well as announced that another is due to premiere on the streaming site, soon.

Captain Laserhawk: A Blood Dragon Remix, an anime based on the cyberpunk-themed Far Cry 3: Blood Dragon, is part of the One Far Cry series.

iOS 15 and macOS 12 take a step toward a future without passwords

Apple's next iOS 15 and macOS Monterey will show off a new feature named "Passkeys in iCloud Keychain," which aims to replace passwords with a more secure login mechanism. Instead of entering a string of text to log into an app or website, you may use Face ID, Touch ID, or a security key. iCloud then syncs the Passkeys across all of your Apple devices.

The feature is based on the WebAuthn standard, which has progressively gained acceptance from Apple, Google, Microsoft, and others over time. Apple implemented support for passwordless logins in Safari on iOS

and macOS last year. However, the new strategy goes even farther, incorporating WebAuthn into app sign-ups and syncing your credentials across Apple devices via iCloud.

Facebook set to launch smartwatch next year

Facebook on Wednesday confirmed it is working on a smartwatch that might one day connect with augmented reality glasses being developed by the leading social network. Facebook Reality Labs is investing in ways to make AR glasses more useful, unit head Andrew "Boz" Bosworth said in a tweet responding to a Verge report that the social network is aiming to unveil a smartwatch next year.

Smartwatch features will include cameras, and it will integrate with Facebook apps such as image-centric

social network Instagram, according to The Verge.

"We've said we want AR glasses to be truly useful -- we're investing in technologies across the board that will make that interaction feel more natural and intuitive," Bosworth tweeted. He cautioned that research doesn't always result in a finished product.

"We'll share more when we're ready," Bosworth said. "And just like with our glasses work, we will consult third-party experts to help us get these right."

Facebook went public a while ago with plans for a launch this year of smart glasses which connect to smartphones as part of an alliance with eyewear titan EssilorLuxottica. The Ray-Ban branded eyewear, a move by Facebook into wearable tech, is an early step in a project to create futuristic eyewear that augments real-world views with data or graphics from the internet, according to chief executive Mark Zuckerberg.
