

## Facebook unveils two new video-calling devices

Facebook has announced two new Portal video-calling devices.

The 10-inch Portal Go is an all-new, portable form factor wrapped in fabric with a standalone battery. The updated Portal Plus replaces the 14-inch device that first debuted three years ago. New software updates put even more of an emphasis on video calls in a remote work setting.

The Portal Go and Portal Plus cost \$199 and \$349, respectively.

The new Portal Plus is similar to its predecessor in terms of functionality, but Facebook has removed the swivel display that could rotate from portrait to landscape mode. Both Portals, like previous versions, have a physical shutter to cover the camera.

The Portal is almost entirely dedicated to video calling. A new calendar app syncs with Outlook or Google to display upcoming meetings and allow you to jump into calls directly from the Portal home screen.

All Portal devices now support Zoom, Cisco's Webex, BlueJeans, and GoToMeeting, in addition to Facebook-owned Messenger and WhatsApp.

In December, Portal will add Microsoft Teams support, reports The Verge.

## Differently-abled people can now operate Android phones with face gestures

Using a raised eyebrow or smile, people with speech or physical disabilities can now operate their Android-powered smartphones hands-free, Google said Thursday. Two new tools put machine learning and front-facing cameras on smartphones to work detecting face and eye movements.

Users can scan their phone screen and select a task by smiling, raising eyebrows, opening their mouth, or looking to the left, right or up. "To make Android more accessible for everyone, we're launching new tools that make it easier to control your phone and communicate using facial gestures," Google said.

The Centers for Disease Control and Prevention estimates that 61 million adults in the United States live with disabilities, which has pushed Google and rivals Apple and Microsoft to make products and services more accessible to them. "Every day, people use voice commands, like 'Hey Google', or their hands to navigate their phones," the tech giant said in a blog post. "However, that's not always possible for people with severe motor and speech disabilities."

The changes are the result of two new features, one is called "Camera Switches," which lets people use their faces instead of swipes and taps to interact with smartphones. The other is Project Activate, a new Android application that allows people to use those gestures to trigger an action, like having a phone play a recorded phrase, send a text, or make a call.

"Now it's possible for anyone to use eye movements and facial gestures that are customized to their range of movement to navigate their phone - sans hands and voice," Google said. The free Activate app is available in Australia, Britain, Canada and the United States at the Google Play shop.

Apple, Google and Microsoft have consistently rolled out innovations that make internet technology more accessible to people with disabilities or who find that age has made some tasks, such as reading, more difficult. Voice-commanded digital assistants built into speakers and smartphones can enable people with sight or movement challenges to tell computers what to do. There is software that identifies text on web pages or in images and then reads it aloud, as well as automatic generation of captions that display what is said in videos.

An "Assistive Touch" feature that Apple built into the software powering its smartwatch lets touchscreen displays be controlled by sensing movements such as finger pinches or hand clenches. "This feature also works with VoiceOver so you can navigate Apple Watch with one hand while using a cane or leading a service animal," Apple said in a post.

Computing colossus Microsoft describes accessibility as essential to empowering everyone with technology tools. "To enable transformative change accessibility needs to be a priority," Microsoft said in a post. "We aim to build it into what we design for every team, organisation, classroom, and home".

## Here's everything Microsoft announced at its 2021 surface event

ARFIN KAZI

Microsoft, this Wednesday, got done with their Fall Surface keynote event where they announced seven new products which ship with Windows 11 from the factory, including the Surface 8 Pro, Surface Go 3, the new, refreshed Surface Duo 2 and much more.

Keep reading to find out what more got announced by the end of the event.

The event started with the announcement of the much-awaited Surface 8 Pro which comes with a 120Hz high refresh rate display that is brighter and has narrower bezels from last year. Also comes with Intel's new 11th generation quad-core processor and Windows 11 by default.

Microsoft also announced the new Surface Go 3, which primarily will be competing against the 9th generation

Apple iPads; the Surface Duo 2, Microsoft's take in making a dual-screen phone; a new Surface Studio which succeeds the Surface book lineup and a Surface X refresh where nothing much changes from the older model apart from 64-bit ARM support and comes with Windows 11 out of the box.

Apart from the computers, Microsoft also announced the 'Ocean Mouse'-- a new eco-friendly mouse made of 20% recycled plastic from the ocean. The packaging that the mouse will be shipped on will also be made of 100% recycled material.

Microsoft also introduced the Surface Adaptive Kit that assists people with disabilities. The kit includes a lanyard opener for the stand which makes it easier to pull the tab and stickers to help visually impaired users to identify keys and other items.

### EDITOR'S NOTE

## It's been a good run, but have I been a good manager?

This issue's feature talks about being a good manager. As I was editing the piece, I couldn't help but think, have I been a good manager to my absolutely wonderful team of writers without whose support this publication would fall in an instance?

As I write my last editor's note for this wonderful publication that I have been a part of since its very beginning, I look back at this journey that has been nothing less of a roller coaster ride in every sense. I can't tell if I was a good manager or not, but I have had the privilege of working with the two most brilliantly wonderful bosses, who allowed me to make horrifying mistakes and learn from them, and an amazing team that helped me to grow every step of the way.

As I step into my next endeavour, I take with me everything that these people have given me, the guidance, the warmth and the unexpected amount of love and patience that I'll be forever grateful for.

It's been quite a long run, and a great one.

# Looking for team collaboration apps? Here are our top picks

OISHEE EERADA MAUDUD

From making sure everyone in the company is on the same page, to keep things organised to enhance productivity, having good team collaboration apps is a must for any company that values efficiency.

Flexible apps like the ones below can help you stay on top of projects, keep your information secure, and prevent anyone from being clueless about priorities, important projects and deliverables. Read about our top picks to pick the collaboration app that suits your team the best.

## TRELLO

**Pricing:** Free plan available; paid plans start from \$6 per user per month (\$5 if billed annually)

Trello is a kanban-styled collaboration app that helps you quickly find out the progress of different projects and the assignees working on them. It organises your projects into boards that can be set up within seconds. You can easily add Trello cards in order to add tasks and add simple descriptions.

Team members can set deadlines and reminders, attach files, add checklists, and comment on the cards. The cards can also be moved from lists to update the status of the tasks, for example from the "To-do" list to "Done". You can also integrate Trello with many other work apps with Trello, such as Slack, Google Drive, Dropbox, Jira, SurveyMonkey, etc.

Trello also allows you to automate

certain common actions, such as moving lists, showing the team members upcoming deadlines and scheduling assignments- without requiring any coding knowledge.

### Pros:

1. Intuitive interface
2. Free mobile (iOS and Android) and desktop apps
3. Templates available for assisting users
4. Data can be exported in CVS and JSON formats

### Cons:

1. The free version limits the number of boards you can make.
2. You cannot view the board from different angles using the free version

## ASANA

**Pricing:** Free plan available; paid plans start from \$13.49 per user per month (\$10.99 if billed annually)

Asana is a multipurpose app that helps teams collaborate and stay organised. With Asana, you can arrange and assign tasks, set deadlines, and do more using the list view. You can visualise your tasks and projects in different ways. Sort tasks using filters such as due dates or assignees to view them as you need.

You can also use timelines to manage dependant and unscheduled tasks. Asana also has a kanban-styled board view, much like the one in Trello. The calendar view shows a colour-coded version of your tasks to help you identify schedule overlaps. Asana has over 200 integrations with apps like Slack, Microsoft Teams,

Everhour, Zoom, etc.

### Pros:

1. Free version allows unlimited tasks and projects
2. 50+ templates to help you get started
3. Data can be exported in only CVS or JSON formats

### Cons:

1. The wide range of features overwhelms new users sometimes (so, may not be the best fit for small teams)
2. Prices of the paid plans may be hefty

## NOTION

**Pricing:** Free plan available only for individuals; paid plans for teams start from \$10 per member per month (\$8 if billed annually)

Being a part note-taking and part task-management app, Notion brings the best of both worlds together. Notion allows you to keep important documents like your company policies, goals, benefits etc. listed in your company home. This keeps such crucial information in one place for

your existing employees and new hires to quickly access when needed. Make lists and move tasks to update progress.

You can also list your projects in kanban boards, set deadlines, add tags, and assign them to team members. Filter and group your projects according to your convenience.

You can keep your notes and meeting minutes organised and allow team members to view and edit them. Comment anywhere and tag people to communicate clearly. Keep data secure by controlling who gets access to certain Notion pages. You can integrate over 500 others apps inside Notion pages, including Slack, Figma, and Google Docs.

### Pros:

1. Unlimited storage and number of team members allowed for team plans
2. 50+ starter templates available
3. Bulk export possible in Markdown and CSV or HTML formats
4. Accessible through the web, desktop, and mobile apps
5. Version history available for at least 30 days

### Cons:

1. No free plans available for teams
2. Bulk PDF export, custom invoicing, and early access available only in the Enterprise plan
3. A dedicated success manager is available only for teams with over 100 members who are enrolled in the Enterprise plan and pay annually.

## A CLOSER LOOK AT KUET'S JUTE-FIBRE RACE CAR

ARFIN KAZI, ABDUS SALAM SHAWN

Kilo Flight, a team of Mechanical Engineering students of Khulna University of Engineering and Technology (KUET), has built a formula racing car out of jute fibre and are looking forward to bringing the technology to regular road cars. The car illustrates not only the young aspirants' potentials but also the diverse applicability of our golden fibre.

Team Kilo Flight built the car with the primary goal of participating in the Formula Student UK event--an annual engineering competition where participants showcase small-scale formula-style racing cars. It's one of Europe's most established educational engineering competitions. The team participated online and came out 33rd out of the 64 countries that took part.

Team captain, Arfan Islam, shared that they wanted to implement the theoretical knowledge gained from academic studies and develop their skills. When explaining

why they chose the automobile sector, he said, "It was preferable for us since we are Mechanical Engineering students. Also, Bangladesh is underdeveloped in this sector, so we hope to contribute to its progress."

### The car

The car, known as Kilo Flight Alpha, uses a jute composite for a large portion of its form. The body, the air intake system, aerodynamic devices, and the driver seat

PHOTOS: TEAM KILO FLIGHT

are made of jute composite.

The car features precise, handbuilt components. Most of the parts were designed and manufactured by the Kilo Flight team. It took about three years and BDT 10-12 lakhs to carry out the project.

When asked about the power output of the car, Arfan said, "According to the Formula Student UK event regulations, we could not go any higher than 710 CCs. Our engine produces 43 bhp, and it propels the car up to 162 km per hour. The car has a hydraulic braking system."

"The team will continue to develop and improve the car," he added.

### Safety and durability

As for safety features, Arfan says, "Formula cars are the safest vehicles in the world. There are automatic response systems in the car to save the driver in the case of an

accident. The chassis is designed in such a way that even if the car rolls over, the driver will remain untouched."

While talking about the durability of the jute composite, Arfan informed that the composite is much stronger than it might seem. "It will not get torn, as some people might imagine. It will break, like iron and steel," he says. "We tried to cut the composite with a tool used to cut iron but couldn't cut it."

Furthermore, the composite is much easier to repair, according to him.

### Difficulties faced

The three years of manufacturing was not a smooth journey. The competition holds annually, so the team has to work year-round. "Managing the team and keeping the spirit up for such a long time is a big challenge for us," the team captain said.

They also faced financial and technical troubles.

"Investment in this sector is insufficient in our country. The team, along with the help of our alumni, financed the project. Since we have crossed the primary threshold, we hope that we will receive private and government funding now."

Additionally, the team felt a need for advanced machinery to make precision parts for the car. "Sometimes, we need precision to the sub-millimetre level," Arfan said. "We need to process the raw materials and prepare them for production, which also demands expensive machinery. So we found alternative ways and got around the problems."

### Where do they go from here?

The team participated in the event online this year because of the pandemic, but they will go to England and showcase their works next year. Arfan stated, "We will bring electric and driverless vehicles along with the combustion vehicle next year. For the next four or five years, we will develop and refine this technology."

"Our ultimate goal is to bring this technology to passenger vehicles," Arfan noted. He explained that the technology used in racing vehicles are far advanced than passenger vehicles. "Considering the road conditions of Bangladesh, we will bring such things that no one else has done or thought of."

Bangladesh is keen on electric vehicles, and policies are getting prepared for domestic production. This team of aspiring engineers could help our auto industry move up the reputation ladder if given proper funding, technical help and recognition.

# The fear of becoming a bad manager might make you one

NOMROTA SARKER

The word 'manager' is probably clichéd enough for anyone to be enthusiastic about managerial roles. The truth of the matter is, most people don't want to be managers. Managerial skills usually include planning, communicating, problem-solving, decision making, delegating and motivating—all at once. This is why many find being a 'good' manager to be more challenging than it is.

Developing managerial skills from early on can help young professionals see through the challenges of becoming bad ones. While some companies tend to overlook the importance of addressing the fears, mapping out the concerns can help employees look forward to managing teams and departments more effectively.

After all, nobody wants bad managers to leave a legacy. Every young professional will inevitably find themselves in a managerial role at least once, so it is a good idea to develop some crucial managerial skills to not enable and normalise bad management in an organisation.

### A good manager prepares their successors

Young or aspiring managers with limited experience intuitively think managerial roles come with big and scary responsibilities. They are not only required to meet their own goals but also help their team reach their desired goals in the company, consistently. They also need to have an exit strategy -- where they can aspire to transition to a better role and develop someone to take on their current one.

"A good manager is someone who realizes the difference between a supervisor and a leader. He/she must have good 'people skills' that inspire others around him/her and give out a positive vibe in the team. A good leader should be able to delegate tasks to the team without the fear of their subordinates failing at it. Practising this would eventually allow them to prepare a successor, which is evidence of good leadership," says Pritom Das, Brand Manager at Grameenphone Ltd.

More commonly, managers around the world are expected to have good communication skills because they need to divide work, delegate and prepare their subordinates to face challenges regularly. Without empathy, emotional intelligence and solid interpersonal skills, a manager cannot possibly expect excellent results from a team that he/she is failing to relate

to and motivate.

### Good managers learn (about their team) everyday

A manager is only successful when they let their team/ subordinates grow under their leadership. This process requires an immersive experience for the manager, as they need to learn and stay updated about their subordinates' challenges at work every day. True leadership requires learning about the people for the people to learn.

"To be frank, I learned most lessons in my professional life from people I was afraid of becoming. Today I am a manager myself and I wake up every day with a heavy responsibility on my shoulders. I am aware that my decisions can have big consequences too. What keeps me going even then is my nature of calling myself a learner for life -- as a manager, you have to be on your toes to keep things relevant for your team," said Sanjida Tanny, an

they work with to show interest in them. Young professionals in any managerial instance thinking they hold the authority and power to control someone makes the foundation of bad management.

Setting clear expectations and focusing on simply being a good human being to your team is a good start. The rest can be figured out through time, patience and consistency," he added.

To set clear expectations, managers can give specific instructions, make them measurable (metrics to track), lay out the relevance of the task and expected outcomes based on the capacity of each employee.

### Good managers give helpful feedback (not just feedback)

From the fear of being a bad manager and googling "what does a good manager do?" Many would pick up a common trait of a manager-- giving feedback. While giving feedback is considerably easy,

different perspective to the discussion. "A bad manager can hold you back from new opportunities and career advancement, set you off on a trajectory that is not right for you, and even sour you on industry entirely. The role of a mentor is a tremendous responsibility that could potentially give you a great deal of power and influence over someone in need of real advice, moulding, and guidance.

This includes everything from support, encouragement, and motivation; to opening new doors; to networking and job opportunities. To have someone whose journey is complementary to yours and who is personally invested in your success is when you know you have a good manager," he added.

### Good managers take the bullet for their team

"Good managers don't need positions of authority/seniority to exercise leadership. They just need to be one step ahead of you in terms of technical and interpersonal skills and be willing to help you grow," said Samuel Mursalin, Chief Strategy Officer at Bolstar, an HR-Tech startup and Lecturer, Department of Management at North South University.

"Good managers articulate everything, bad and good, very clearly so that you know what they expect from you, what you need to do to attain the KPIs and what is at stake. Good managers manage the expectations of teams very well. They will give their team members all the credit and take all the bullets himself/herself," he added.

Managers can be a lot of things, but one thing managers are is their perception of who they are. Working with a team to steer it forward can be overwhelming but managers who ask for help and empower others in the process do it seamlessly and consistently.

"A good manager should encourage ideas and ownership. The manager I would want to work with should see to it that subordinates are presented with opportunities for learning and growth. They should also be able to deal with issues fairly, politely, and professionally," said Oishee Erada, Sales Development Representative at a local SaaS startup.

While the roles and responsibilities of a good manager are definite, it is also subjective. Giving in to the fear of being a bad manager because you are dealing with one is what does the most damage to an individual's growth.

Instead, talk to people before you are to take up a managerial role, learn about the basics of not coming off as arrogant to your subordinates and do your job with integrity. These might not make you a 'good' manager overnight but will not make you a bad one.

No matter what you do, give out credits for good work. Stealing credits doesn't put you in the spotlight, it makes you as annoying as the blinking tail light of a totalled car, to your subordinates.

Education Advocate and Communications Professional.

"Be open to ideas, be open to learning from everyone around you, be open to teaching and sharing your learnings, and while we all love being tech-savvy, make sure the human in you is always alive," she added.

### Good managers don't overshadow their competence

"Managers need to have some level of competence for managing people and guiding the team. However, there is a significant difference between 'being competent' and 'showing competence'. Their subordinates need to trust their judgements based on their competence but if the manager is over-showing it in any opportunity they get, the team is likely to lose trust in them and get intimidated by their methods of getting work done," said Arijit Saha, a Senior Business Analyst at a leading IT company.

"A manager's job is to keep the people going--through conversations, inspiration and appreciation. But for that, they need to be 'interested in the people

## HANDS-ON REVIEW

## OPPO F19 Pro - A phone for noobs and pros

SHAHRIAR RAHMAN

After a very long time, we are back with OPPO's exciting upper-midrange device- the F19 Pro. F19 is an iteration of OPPO's mid-tier product segment and since its launch several months back readers have been asking us for a review of the device. OPPO handed us this review unit almost a month back and here's what we have to say about the device:

Firstly, the phone comes with an 'atypical' form factor and not an 'awe-inspiring' design. But does it mean it's mundane? Definitely not. The phone does not shy away from the F series design language rather embraces it. The plastic body has a glossy finish and is really soothing to hold on hand. The phone is slim and sleek as well: weighing around 172gm and just 7.8mm thick. On the back, you will find the quad-camera housing and a flash. The power button is on the right and the volume rockers are on the left with the triple card sim slot. The phone comes with a 3.5mm audio port which is

becoming rare these days.

The phone sports a stunning 6.44-inch AMOLED 60Hz Widevine L1 display despite not having a higher refresh rate screen. The smoothness while scrolling the screen was evident but the colour rendition and high brightness of the screen were trying to compensate for it (it was not able to though!).

The performance of the phone is where we feel like it has significant room for improvement. The phone comes with a MediaTek Helio P95 chip and 8GB RAM + 128GB ROM. Helio P95's 12nm process output is not the best in its class and the result can be seen while gaming, particularly if you are playing graphics-intensive games. For example, while running Call of Duty Warzone we could only get around 30frames per second in high settings.

The phone comes with OPPO's proprietary Color OS 11.1 which is based on Android 11. Over the years, OPPO has made significant improvements on its Color OS 11. It is light, smooth and much more intuitive than before. One great thing about the UI is that it does not, unlike Xiaomi or Tecno, show any advertisements which is a nuisance to many.

The camera of the phone has a quad-camera setup in the back and houses a 48 MP main camera with a 5MP ultrawide lens, 2MP Macro and 2MP depth sensor. The options on the camera were plentiful and not so hard to use. If you are pro- you can try to use the macro features. Sadly, the quality of the images was not that great in macro mode.

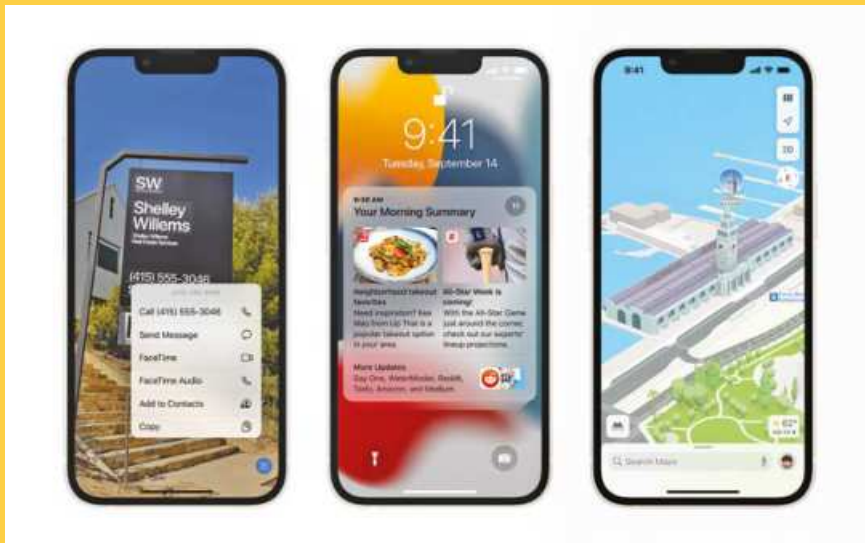

Priced at BDT 26,990, the phone is expected to face stiff competition in the market as there are several great phones out there with excellent hardware in the same price range.

Check our website for sample shots. Regular photos seemed fine to use. The night mode tried to suppress noise but was not able to bring out too many details either. The run of a mill punch-hole selfie camera on the front was able to produce average 'groupfies'.

The phone comes with VOOC 4.0 30W fast charger. It could charge the phone from zero to full in a little over an hour. The 4,310 mAh battery nearly lasted a day which is something we loved about the phone. Priced at BDT 26,990, the phone is expected to face stiff

competition in the market as there are several great phones out there with excellent hardware in the same price range.

## Offline Siri, 3D maps, screen sharing: Here's what's new in Apple's iOS 15

ZARIF FAIAZ

Apple has finally released the iOS 15 for the public and it's available to download now in Bangladesh. We have received our first update and here are the key highlights:

### A NEW SAFARI

Safari's new "tab bar" mode, which places the URL bar at the bottom of the screen changes the old Safari layout completely. It's taking some getting used to. But being able to swipe between tabs is more convenient, and Apple has fixed the URL bar's behaviour so that it stays at the bottom of the page. If you prefer the old style, you can easily change it in the Settings app.

### SHAREPLAY

A new feature in FaceTime, SharePlay allows you to be on FaceTime with others and continue working, watching or listening to music and even share your screen. It seems great for collaboration or virtual hangouts.

### FOCUS MODE

Focus modes, which are essentially a beefed-up version of Apple's existing Do Not Disturb, allow you to set specific apps and contacts to ping you at specific times. Focus modes can be activated at specific times of the day or in specific geographic locations, as well as toggle specific home screen layouts. You can also have iOS 15 switch Focus modes on and off for you based on when it thinks you'll want them on or off.

### LIVE TEXT

You can use your camera to capture any text, whether it's handwritten or typed, and Live Text will turn it into copyable text. Tap and hold to bring up a "live text" icon in the same pop-up menu that copy/paste commands live in to snag text directly into a message or email in the camera app, with photos you've saved, in Safari, and even in most text fields.

### OFFLINE SIRI

For the first time, Siri can now process speech entirely on the device, allowing for (theoretically) more secure and faster interactions, as well as offline Siri commands. Those are obviously limited in what they can do, but you can still use them to open apps, set timers, and toggle settings while your phone is in aeroplane mode.

### REVAMPED APPLE MAPS

Apple Maps is releasing a new 3D map that appears to be quite fancy. The new, more detailed maps look fantastic, but their functionality is severely limited. San Francisco, Los Angeles, New York, and London are expected to be available at the start. Trees, bridges, and major buildings are now visible in Apple's stylized 3D view, and streets even show individual lanes when zoomed in.

### WHAT ELSE?

Several Apple apps, including Photos, Music, Safari, Podcasts, and Apple TV Plus, now include a new "Shared with You" section. It's a good reminder of Apple's stranglehold on your phone's core services. Links, photos, Apple Music songs, TV Plus shows, Apple News articles, and podcasts will now be highlighted in Apple's corresponding apps if you receive them.

There's a built-in VPN like masking system called Private Relay, which is still currently in Beta. The Weather app also receives a facelift.

# What's new on Netflix in October

TAHSEEN NOWER PRACHI

With a hope to count on October as its promise to bring a little chill with a cold-ish breeze, we got other things to chill with in-store as well. To go with the weather, Netflix has brought along a supply of October's fresh bunch of series, movies and docuseries' for you to watch.

So, buckle up and let's take a look at what is in store for you on Netflix this month.

## MAID

Margaret Qualley and Andie McDowell star in this gripping limited series about a young mother who takes a job cleaning houses to escape an abusive relationship, but finds her new life is

more complex than she'd anticipated.

The best-seller adoption of Stephanie Land's 'Maid', has gained quite a hype from its trailer. To witness her fight to provide for her child, eyes on the screen.

Release Date: October 1

## THE GUILTY

*The Guilty* on Netflix is the new American adaptation of an edge-of-your-seat Danish drama.

Jake Gyllenhaal and Ethan Hawke star in this thriller about a police officer who has been moved to dispatch duty. One distressed caller on a bad day of demotion, and the scrambling attempts

to rescue, with some tormented revelations.

Release Date: October 1

## POKEMON THE MOVIE: SECRETS OF THE JUNGLE

Good news ahead for Pokemon lovers! The 23rd animated movie from Pokemon is coming to Netflix. When Ash and Pikachu go to explore the forest of Okoya, they discover

a boy named Koko. Meeting them Koko discovers the human world, and something threatening his home! Release Date: October 8

## HOUSE OF SECRETS: THE BURARI DEATH

The mysterious deaths of 11 members of the Chundawat family in Burari, Delhi shook India in 2018. Leena Yadav's creation of the docuseries examines chilling truths and theories around the deaths--murders, suicide or something else?

Release Date: October 8

## YOU (SEASON 3)

You might have already felt the chill of the red and white cake from the trailers. Joe and Love are married and have moved to California. As their relationship dynamic takes a new turn, Joe continues to repeat the cycle of obsession, again. Release Date: October 15

## LITTLE THINGS ( SEASON 4)

A piece of good and sad news for the fans of Dhruv and Kavya couple from our favourite romance series. The final season of this cute bit-of-life series is about to air, with a chance of the couple taking the next big step in their relationship.

Release Date: October 15

## MY NAME

Another dark k-drama thriller after last month's *Squid Game* is on the hype. In order to find the truth about her father's death, Yoon Ji Woo, a member of an organised crime ring, infiltrates the Police as an undercover agent. Hope it lives up to the hype!

Release Date: October 15

## NIGHT TEETH

This suspenseful thriller has raised quite a mystery in its trailer, for starters. A young driver picking up two mysterious women in his taxi might lead to a risk of his life. Will he make it through?

Release Date: October 20
