Says UN report about Bangladesh

"In 2020, the sharp increase in global food prices in the second half of the year translated directly into an increased average cost of a healthy diet at the global level, and for all regions and almost all subregions in the world," the report said published yesterday.

The report said although there were hopes that the world would emerge from the pandemic in 2021 and food security would

When it comes to Bangladesh, a total of 10.7 percent people of the total population faced severe food insecurity while 3 percent people faced moderate or severe food insecurity.

The first fully formed pictures are set for release on July 12, but Nasa provided an
