

Samsung Galaxy A73 5G: Bringing the A game?

TANZID SAMAD CHOUDHURY

Samsung Bangladesh brought its latest A-series smartphone to the Bangladesh market recently, the Galaxy A73 5G - the successor of the Galaxy A72, released last year. After using the Samsung Galaxy A73 5G smartphone for a couple of weeks, here's what we have to say about Samsung's latest A-series entrant.

Design

The review set which we received was 'Awesome Gray' in colour. The elegant matte Grey lines of the Galaxy A73 5G are beautifully designed and give the smartphone its aesthetic edge. Comprising slim bezels and a surprisingly light display, the device holds together nicely in a thin frame. The phone feels light as it weighs just 181 grams and has a plastic back cover with a sleek matte finish - quite light for a feature packed phone.

Display

Coming with a 120Hz FHD+ Super AMOLED Plus display and rated IP67 for water and dust resistance, the Galaxy A73 5G can be immersed in water (up to 1 metre) for a while. With additional protection from the Gorilla Glass 5, the device is tougher than its previous additions and is less prone to scratches. The device allows vivid visibility outdoors with up to 800 nits and has an 'eye comfort shield' which reduces strain on the eyes during prolonged multimedia viewing sessions. The display showed relatively smooth visuals and provided a quality viewing experience with vividly detailed pictures and showed hardly any blurry effect, featuring the largest display size from the recent A-series lineup.
