

Budget all-in-one PCs under Tk. 60k for offices

SOFIA NOOR RAFA

All-in-one PCs come with all the features of a desktop but work like a laptop owing to their 'all-in-one' setup. They help declutter the workspace and allow smoother handling than desktops because all the parts are built-in. All-in-one PCs are usually preferred in corporate environments to quickly perform tasks such as checking bills, taking orders, creating files, replying to urgent emails and coding programs. Below are our recommendations on all-in-one PCs currently available in the local market. Please note that price and availability may vary across stores.

Dell Inspiron One 20 3043

Dell Inspiron One 20 3043 comes at an affordable price, yet packs all the features you want on a modern PC. This is a good pick for fulfilling workspace demands such as managing orders and categorising records.

Processor: Intel Pentium Quad Core-N3530 Processor
