

a bit of depth. We will include a few sample shots for our online edition of this story. Do have a look.

**The performance got a boost too!**

Under the hood, the Galaxy Z Fold4 is powered by the new Snapdragon 8 Plus Gen 1 chip, along with 12GB of RAM. The device is blazing fast in most instances. We barely noticed any lag during our review period. The benchmarking apps mostly also put its performance ahead of the S22 Ultra, the last year's flagship by Samsung.

**The kinks!**

The twist that this phone offers can truly be understood if you are the kind of person who loves to scroll their Facebook Feed while seeing their favourite team's football match. Also, operating multiple word processing apps while browsing makes this phone a dream device for people who love multitasking.

The viewing experience on flex mode was great too.

**Let's come to reality for a change!**

Is it a practical phone for the average joe?

Absolutely not. The Fold4 is clunky and heavy and requires the same handling when you are engaged in outdoor activities. Although many of the apps are already optimised, we found that some of the apps were not able to make the most of the screen real estate. The crease is still there, and the under-display camera comes with an average configuration.

Lastly, the pricing of the phone - it will cost you just as much as buying a decent

motorcycle.

**Our Verdict**

The phone is in a league of its own. For many of us out there, this might not be the best choice of device. However, for some, this would be an ideal one. If you are the type of person who wants to awe people around you with a jaw-dropping status symbol that offers the best-of-class features – then this phone is a must-buy for you.
